To-day it will be decided, but, until the sixth of *The Motor Cycle* telegrams is despatched broadcast to agents throughout the country, the motor cycle world will await the issue, wondering whether Dixon on his Indian, either Dance or Bennett on the Sunbeams, Edmonds or Brandish on the Triumphs, one of the redoubtable Scott trio, Wood, Langman, or Clapham, or a Norton rider, such as Black or Hassall has been able to prove superiority of the 500 c.c. mount against the super-efficient 350 c.c. A.J.S. of Howard Davies, which beat the Seniors hands down in last year's event.

Of course, there are other possibilities; the Massey-Arran, although of 350 c.c. only, will give any machine on the course a run for its money, especially the one ridden by J. Whalley, who will assuredly ride to win. Then there are the Sheffield-Hendersons, the N.U.T.'s, and the New Gerrard. If these machines can survive the cracking pace which will be set by the bigger men, they have more than a sporting chance, for the riders are good, if not old, hands at the racing game.

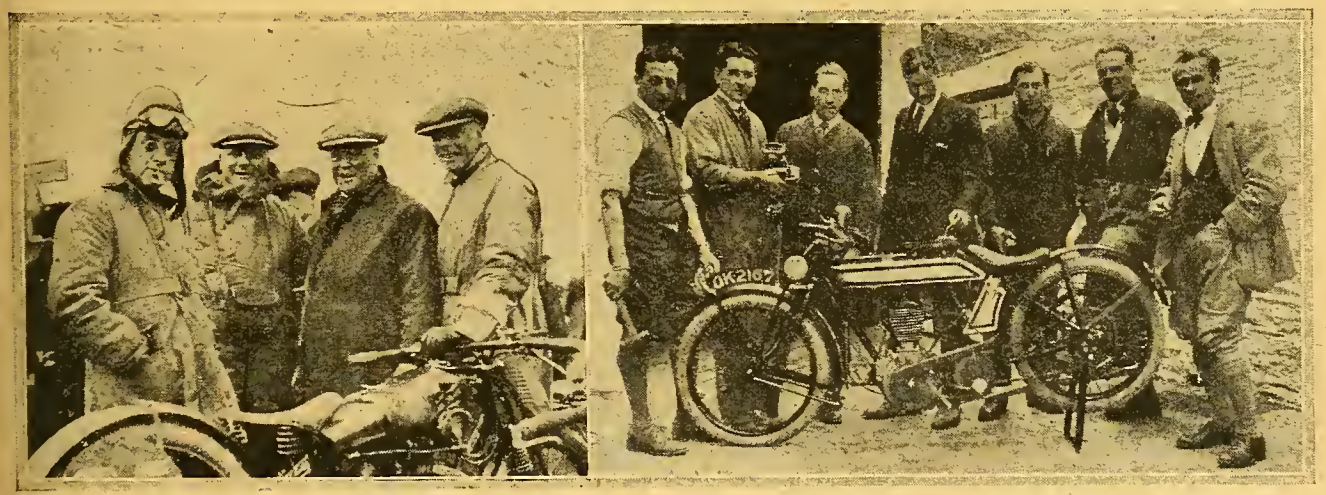
Is it the Manx air that makes the Triumph men so cheerful? A snapshot on the front at Douglas.

### Are Practice Speeds Deceptive?

There are many who say that the speeds of practice laps are valueless, because the riders neither run "all out" nor complete their laps without sundry stops either for adjustments, refreshment, or mystification. This view can scarcely be maintained when the actual times are considered. If one hears, for example, that a certain rider was seen to be going like the wind at various places, if various other competitors say they were passed "at 70" by the same man and then his lap time is announced as a phenomenally short one, there is no earthly reason why it should not be taken as a true index of what he can do.

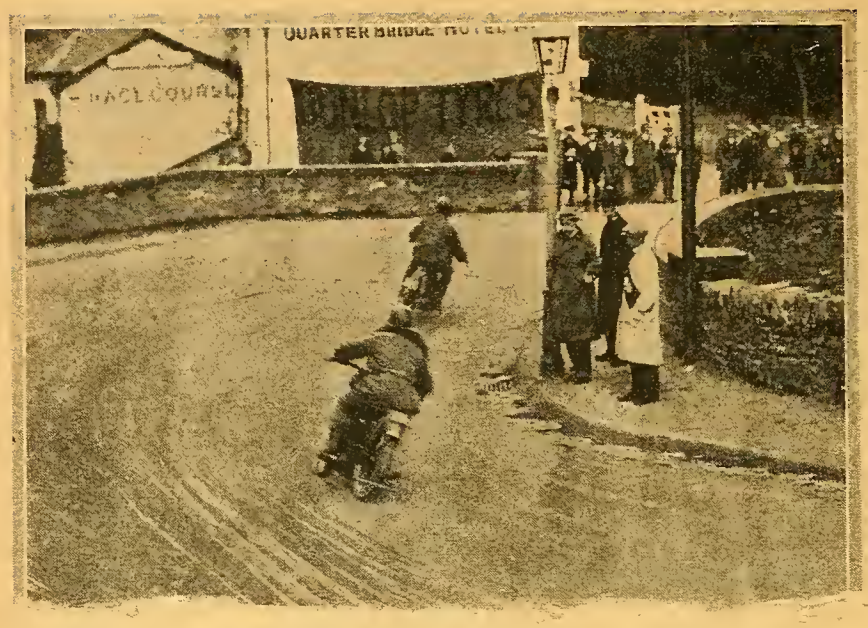
Various reasons may be advanced for the practice speeds which have already beaten the fastest lap of last year. There is a slight shortening of the course, not quite a quarter of a mile, indeed, but the alteration has eliminated one corner in Ramsey. Then Keppel Gate is twice as wide, and Windy, Signpost, and Governor's Bridge corners have all been eased. These improvements, perhaps, make the course one minute or a little more faster. Then there is an increased efficiency in machines—not a greatly improved engine efficiency, but a better regard to frame design, saddle comfort, steering, and controllability, while brakes on which a T.T. might be won or lost as easily as on an engine have been mightily improved.

All these things may be taken in relation to the high practice speeds which were attained last week to prove that the latter were no mere flash in the pan. It is safe to assume that the best laps in the race will be in the neighbourhood of thirty-seven minutes, and that the leading men will average about forty minutes per lap. Writing at the end of the practising period, it is almost



A cheerful quartette. Dr. Hopwood, one of the entrants in Tuesday's race; Mr. Victor Holroyd, of the Rudge-Whitworth Co.; and two members of the Shell organization.

Norton exponents at Castle Mona. Victor Horsman, who was feeling shy at the moment, is in the centre of the group; D. M. Brown, the Manx rider, holds the hammer; N. Black (smiling as usual), and R. Cawthorne (severe) on the right.



Senior machines out for a final practice lap. A Rudge rider leading a more cautious rider over Quarter Bridge.

impossible to do more than forecast a round dozen of men to watch as likely winners.

In a motor cycle race such as the T.T., while the "form" of both man and machine may be fairly accurately gauged, no one can gauge the workings of all those things we ascribe to "luck." A broken cotter, a fouled plug, a puncture, a leaky tap, may all happen to the favourite, and so an unforeseen circumstance may rob him of victory. Then there is the weather. Rain and mist on the mountain will slow some men more than others, and that has nothing to do with the machine, except perhaps in the case of one make. There are riders who will drive as cheerfully on full throttle into a clinging haze as they will burble along a sunny promenade with engine just firing—there are others, equally daring under fine conditions who would simply lose heart under parallel circumstances. No one can test these qualities beforehand with any thoroughness. During practice F. W. Dixon (Indian) and H. Langman (Scott) distinguished themselves by covering laps under 40 minutes. For some reason the Scott machines, although providing previous winners, have had a poor percentage of finishers; it is believed that the practically standard model running to-day will stand up as well as the next best machine. Given the same standard of reliability, these two men should fight a hard duel in the midst of Triumphs, Sunbeams Nortons, and A.J.S.'s, with Rudges close behind waiting for a crack-up of faster machines to slip into leadership. The Douglas riders are handicapped by steering and carburation, but are remarkably fast on the straights, while the dark horses remain to be watched.

Below in order are the fastest times recorded in each day during the second week of practice. They indicate to some extent what men are in the running, providing that propitious weather and absence of mechanical trouble favour the day.

MONDAY.

F. W. Dixon (Indian), 47m. 28s.
R. Bownass (N.U.T.), 47m. 32s.
J. W. Shaw (Norton), 47m. 32s.
J. Whalley (350 Massey-Arran), 47m. 45s.
N. Black (Norton), 49m. 21s.
A. W. Jones (Douglas), 49m. 40s.

TUESDAY.

F. W. Dixon (Indian), 41m. 7s. and 40m. 53s.
G. Dance (Sunbeam), 41m. 5s. and 46m. 10s.
W. W. Brandish (Triumph), 42m. 16s.
J. Whalley (350 Massey-Arran), 43m. 25s.
H. R. Davies (350 A.J.S.), 43m. 50s.
W. Hollowell (Norton), 45m. 20s. and 43m. 50s.
J. A. Porter (New Gerrard), 44m. 44s. and 44m. 43s.

WEDNESDAY.

H. Langman (Scott), 39m. 55s.
W. W. Brandish (Triumph), 41m. 6s.
W. Johnson (Sunbeam), 41m. 20s.
J. H. Illingworth (Norton), 41m. 20s.
W. Hollowell (Norton), 43m. 20s. and 42m.
S. A. Crabtree (Sunbeam), 42m. 5s.
J. H. Simpson (Scott), 42m. 31s. and 47m. 36s.
H. Le Vack (350 New Imperial), 41m. 20s.
G. Kelly (350 A.J.S.), 43m. 40s.
G. Dance (Sunbeam), 45m. 18s. and 43m. 17s.

THURSDAY.

F. W. Dixon (Indian), 39m. 11s., 39m. 30s.
G. Dance (Sunbeam), 42m. 20s.
A. Bennett (Sunbeam), 42m. 20s.
N. Black (Norton), 42m. 25s.
G. Kelly (350 A.J.S.), 42m. 55s. and 43m. 2Ss.
H. W. Hassall (Norton), 42m. 20s.
D. S. Alexander (Indian), 42m. 45s.
T. C. de la Hay (Sunbeam), 43m. 15s.

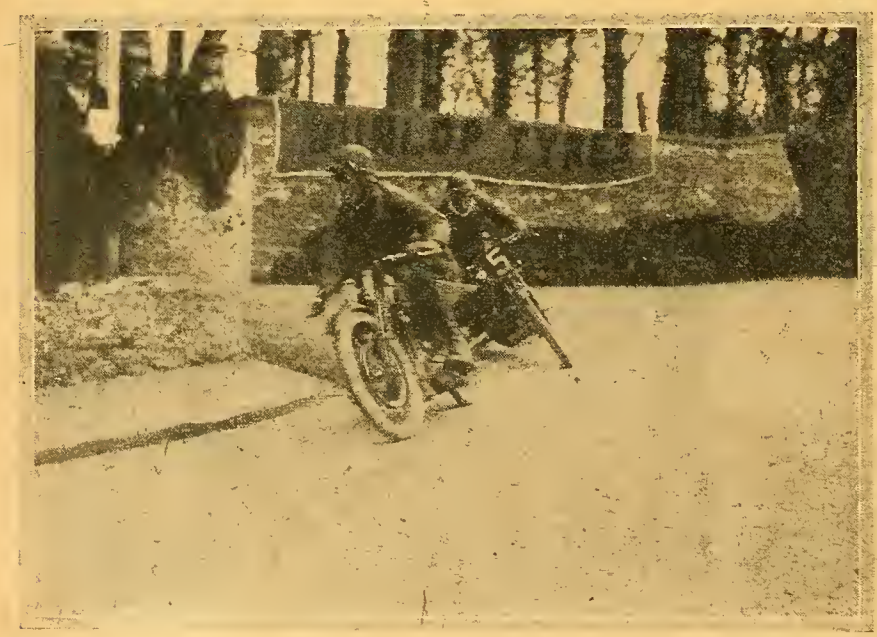
FRIDAY.

C. P. Wood (Scott), 48m 41s. and 40m. 39s.
G. Clapham (Scott), 41m.
H. Langman (Scott), 42m. 27s.
H. Le Vack (350 New Imperial), 43m. 56s.
H. W. Hassall (Norton), 43m. 34s.
G. M. Black (Norton), 45m. 20s. and 44m.
T. Simister (Norton), 47m. 8s. and 44m. 46s.

SATURDAY.

H. Langman (Scott), 40m. 30s.
G. Walker (Norton), 42m. 50s., 42m. 10s., and 40m. 48s.
G. Dance (Sunbeam), 41m. 5s.
A. Jackson (Sunbeam), 41m. 36s.
I. Thomas (Scott), 42m. 18s.
R. Bownass (N.U.T.), 42m. 38s.
H. Black (Norton), 42m. 42s.

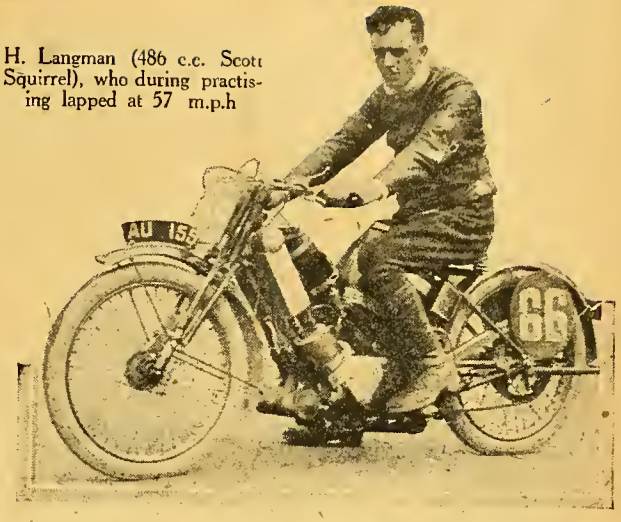
From the above figures it is to be seen that of those men who start out this morning Dixon in one week was amongst the first three fastest laps on three days, Dance two days, Langman two days, Brandish two days, and Shaw, Bownass, Johnson, Simpson, Kelly, Le Vack, Bennett, Wood, and Clapham each one day. The makes of machines making the three fastest laps each day were Scott (five times), Sunbeam (four times), Indian (three), Triumph (two), N.U.T., Norton, New Imperial, and A.J.S. (one).



The last deceleration and acceleration test on the circuit—Governor's Bridge. It is not a case of "slowing down to fifty" at this point—"five" is nearer the mark.

# LAST WORDS ON THE PRACTISING.

## Remarkable Turn-out of Riders on Monday Last. High Speeds Attained.



H. Langman (486 c.c. Scott Squirrel), who during practising lapped at 57 m.p.h

TAKEN generally, the practising period has passed off smoothly. No really serious casualties have occurred, although Thacker (Beardmore) lost his left forefinger, and Horsman (Raleigh and Norton) could not ride. Horsman was badly shaken at the end of last week.

A very tolerant attitude has been displayed by the police, and influential natives are satisfied that the T.T. riders have endeavoured to comply with all the regulations and precautions for safety. The control of practising by the Manx Club has been most efficient.

At the last moment G. A. Vandervell withdrew his machine, which leaves only one overhead-valve Norton, to be run experimentally by Cawthorne. Graham Walker will ride a standard Norton, replacing Vandervell; Adamson replaces Horsman.

As usual, the week-end proved a busy one for the competitors and the horde of mechanics on the Island. Practically every stable presented an animated scene as the final overhauls and finishing touches were being put to machines on the eve of this, the greatest race of all times. That competition is keener than ever old hands at the game are fully convinced. Generally speaking, the machines are in a more advanced state of completion than in former years. Of course, the Island is full of favourites, but whether the winner will be found among the 500 c.c. capacity machines is a moot point. The A.J.S. camp by no means despairs of a look in once again in the Senior event.

### The Eve of the Races.

As to the course, the riders seem to agree that an improvement has been made to the corners, and by amendments of the route in Ramsey, which embrace a private road, eliminating two corners, for which privilege £150 is said to have been paid, by which at least one minute has been saved.

The fastest Senior machines can attain 85 m.p.h. on two or, say, three short stretches, but Davies estimates that his A.J.S. exceeds 80 m.p.h. under best conditions.

Whereas the roads are complained of as being very rough in parts it would appear that the buffeting is largely due to increased speeds, and all predictions concerning possible winners are accompanied by a proviso, "if machines will stand up."

Practice times have beaten existing records, but it has always been found that on the actual race day the best practice speeds are further exceeded. That good sportsman, P. J. Evans, winner of the 1911 Junior Race, is this year armed with three gold cigarette cases for the trio who are credited with fastest laps in the three races. Due to flying stones, many competitors have adopted Easting handlebar screens, which should also prove useful on account of the dust which, this year, is far more troublesome. Although there are fewer people on the Island this year, due to the inconvenience of pre-Whit week, general interest was never more pronounced. All tickets for the grand stand were disposed of by the week-end, and more could have been sold had accommodation been arranged.

In spite of prognostications to the contrary, quite a number turned out for practice; although many merely toured the course, a few put in serious work. A. Bennett (Sunbeam) covered two laps in splendid style, his first being covered in 39m. 11s., and F. W. Dixon (Indian), who started late, got round in 39m. 59s.

During this lap excitement was caused by Wood (Scott) flashing by just as Dixon started, and not a few hoped to see an interesting duel. Dixon, however, came in alone, and Wood, who started from Ramsey, came no further than the mountain, leaving students of form still in the dark. Possibly the brilliance of the morning was responsible for such a large gathering so late in the day, for everyone had qualified, and most of the machines were ready for sealing. A. H. Alexander's twin carburetter Douglas is his 1920 Grand Prix machine. Sunbeams were out in force, and a few Triumphs came through from Ramsey going quietly. The speed of the Scotts has jumped up since last year. Nortons from the private owners' camp appeared to be having a fuel consumption test, Knowles starting with only half a gallon of petrol.

At the last moment it was decided to use New Imperial side-valve machines, the experimental overhead models not being sufficiently advanced for the strenuous test of the race.

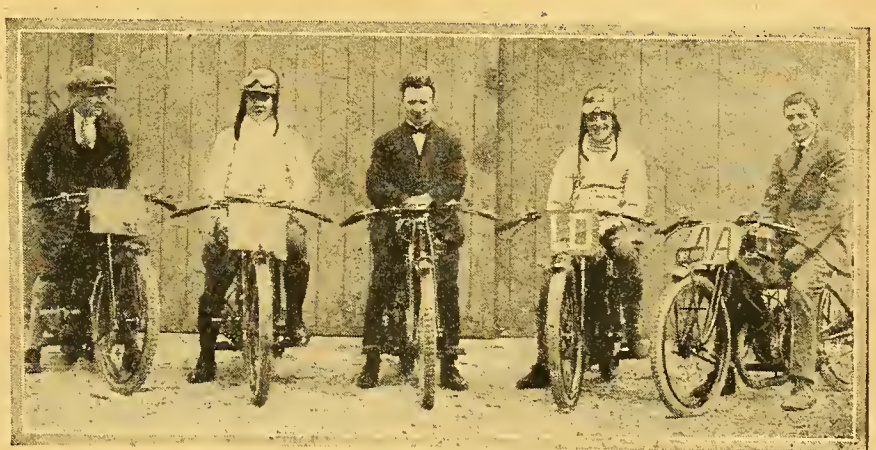
THE NEXT STAGE!

*MOTOR CYCLISTS interested in small or large cars should read*

The Autocar

Every Friday 4d.

*the forerunner of all motoring journals. Founded in 1895, it remains the largest and most successful automobile paper, and enjoys the greatest circulation. It is universally accepted as the representative British motoring journal.*



A quintette of Sun exponents. W. H. Lord (14), Gus Kuhn (3), and M. Bishop (10) were the three men entered for the Junior race, the other two riders being reserves.

# SOUTHEND CLUB'S HILL CLIMB.

SOMEHOW or other the word "Essex" on the programme of a hill-climb or speed event is synonymous with a great multiplicity of classes, and last Saturday's climb of the Essex County and Southend A.C. was no exception to the rule.

According to the voluminous seventy-page programme there were 1,078 entries, 236 being motor cyclists; but, boiled down to a basis of one man, one entry, there were roughly twenty-five riders in all.

Langdon Hill, with its maximum grade of 1 in 8, made quite a useful venue, but the organisation, especially towards the end, was not flawless.

Most of the excitement was concentrated in the acceleration test, in which competitors were required to come to a standstill between two tapes midway up the hill and then get going as quickly as possible. Shareholders in the various tyre companies looked on with particular pleasure. Two good men made mistakes: F. R. Cotgrove (Sheffield-Henderson) fell, and S. M. Greening (Francis-Barnett) overshot the second tape by six yards.

350 c.c. TOURING MACHINES.

1, L. F. Peaty (350 Hawker), 35⅗s.

UNLIMITED TOURING MACHINES.

1, L. F. Peaty (350 Hawker), 31⅘s.; 2, W. H. Fraser (499 Triumph), 33⅖s.

250 c.c. AND 350 c.c. SPORTS MODELS.

1, F. Cotgrove (348 Sheffield Henderson), 32⅗s.; 2, S. M. Greening (248 Francis-Barnett-Jap), 35s. (1st in 250 c.c. class).

500 c.c. AND UNLIMITED SPORTS MODELS.

1, K. S. Duncan (490 Sunbeam), 28⅗s.; 2, F. R. Cotgrove (348 Sheffield-Henderson), 31⅗s.

UNLIMITED SOLO MACHINES.

1, S. M. Greening (248 Francis-Barnett-Jap).

UNLIMITED SOLO SPORTS MACHINES.

1, K. S. Duncan (490 Sunbeam), 29⅕s.; 2, H. E. Bolton (996 Indian) and S. M. Greening (248 Francis-Barnett) tied, 34s.

1,000 c.c. PASSENGER MACHINES.

1, L. P. Peaty (550 Hawker sc.) and S. M. Greening (348 Omega-Jap sc.) tied, 42s.; 2, J. G. Freeman (698 Raleigh sc.), 50s.

ACCELERATION TEST.

1, K. S. Duncan (490 Sunbeam), 39s.; 2, W. H. Fraser (499 Triumph), 42s.

## AWARDS IN S.W. TRIAL.

AFTER a tie with W. G. Churchill (Verus), **F. J. Ellis (Matchless sc.)** was awarded the **South-Western Trophy** in the Devonshire Open Trial described last week.

CLASS "A." SOLO UP TO 250 cc.

1ST CLASS AWARDS.

P. L. Mayo (Coventry-Eagle).

2ND CLASS AWARDS.

Mrs. Jansen (Ner-a-Car), D. Read (Ready), W. E. May (Excelsior).

CLASS "B." SOLO UP TO 350 cc.

*Silver Cup.*—W. G. Churchill (Verus).

*Gold Medal.*—S. Warne (Precision Barr and Stroud).

1ST CLASS AWARDS.

B. R. Robins (New Imperial), G. H. S. Earle (A.J.S.), H. F. Youings (Diamond-Jap), J. F. Anderson (Connaught), A. S. Gray (Beardmore-Precision), A. C. Westlake (Rex-Acme).

2ND CLASS AWARDS.

C. G. Clapshaw (A.J.S.), A. S. Milward (Wooler), J. Wooler (Wooler), H. H. Robinson (Wooler), T. G. Blundell (O.K. Junior), A. C. Smith (Sun Rotary).

CLASS "C." SOLO UP TO 500 cc.

*Silver Cup.*—G. L. Morrish (Sunbeam).

*Gold Medal.*—J. Pruen (Douglas).

1ST CLASS AWARDS.

F. J. Adam (Norton), E. W. Spencer (Douglas), A. H. S. Love (Nortoo), J. E. J. Whittager (Sunbeam), S. W. Easton (A.B.C.), G. Hancock (Sunbeam), W. Bray (Norton), W. F. Burnell (A.B.C.), S. G. Wheeler (Nortoo), L. Stagg (Sunbeam), E. H. Williams (Triumph), J. H. H. Veasey (Zenith-Bradshaw), K. Delve (Triumph), V. G. Tucker (Norton), C. L. Sprosen (Connaught), J. S. Rogers (James).

2ND CLASS AWARDS

H. H. Nicholson (Martinsyde), H. C. Jennens (James), P. V. Hare (Douglas), W. A. Le Brun (Rudge), E. C. Collins (Norton), E. V. Wood (Connaught), J. N. Illingworth (Norton), H. C. Bonchier (Zenith-Bradshaw).

CLASS "D." SOLO UP TO 750 cc.

*Silver Cup.*—L. Peters (Norton).

*Gold Medal.*—E. L. Herring (Triumph).

1ST CLASS AWARDS.

J. T. Bashall (Martinsyde), A. A. Symes (Martinsyde), H. Collins (B.S.A.), G. W. Anstey (Triumph), G. R. Claridge (Triumph), R. O. Bellasis (Scott).

2ND CLASS AWARDS.

Eli Clark, Jn. (Douglas), F. A. Harris (B.S.A.), W. C. Treloggen (Indian Scout), W. J. C. Pope (Triumph), E. H. Jones (Triumph), C. Jones Humber).

CLASS "E." SOLO UP TO 1,000 cc.

1ST CLASS AWARD.

J. Carslake, Jun. (Brough Superior).

CLASS "F." SIDECARS UP TO 600 cc.

*Silver Cup.*—E. A. Wright (Sunbeam).

2ND CLASS AWARDS.

C. Forward (Bradbury), E. Wood (Norton).

CLASS "G." SIDECARS UP TO 1,000 cc.

*S.W. Trophy and Silver Cup.*—F. J. Ellis (Matchless).

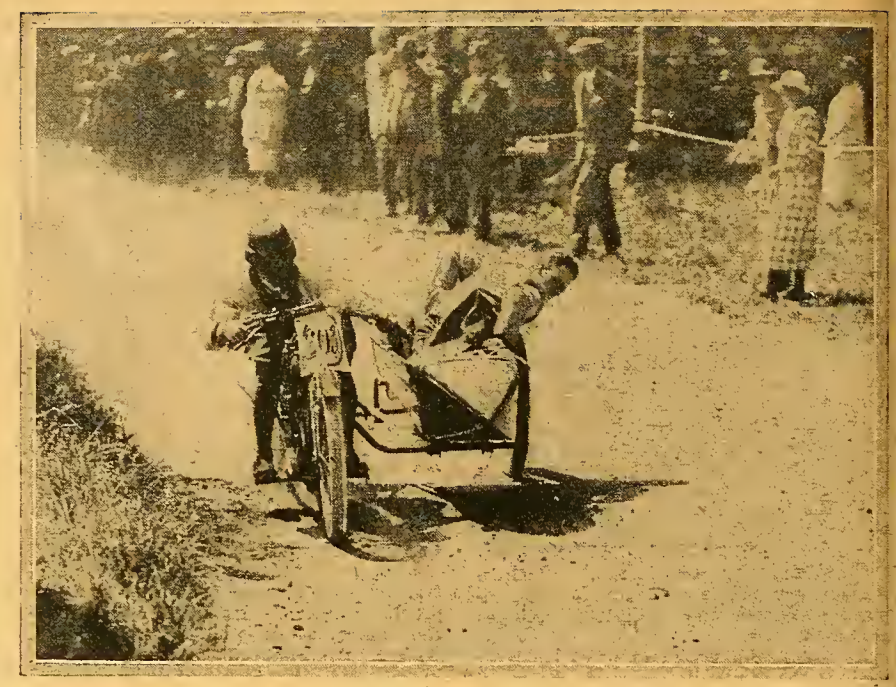
*Gold Medal.*—Mrs. Hardee (Matchless).

1ST CLASS AWARDS.

F. O'Brien (Matchless), G. D. Hardee (Matchless).

2ND CLASS AWARDS.

E. J. L. Strong (Harley-Davidson), S. Hall (Rudge), E. S. Powell (A.J.S.), J. Durant (Norton).



On a 348 c.c. Omega-Jap sidecar, S. M. Greening succeeded in equalling fastest sidecar time of the day.

## SOUTH MIDLAND CLUBS AT BROOKLANDS.

DESPITE the counter-attraction of the T.T., the South Midland Centre A.C.U. meeting at Brooklands received an excellent entry, and provided some exciting racing.

One- and two-lap scratch races were the order of the day, until the concluding events, an inter-club relay race and a three-lap winners' handicap. Results:

250 c.c ONE LAP SCRATCH RACE.—1, J. V. Prestwich (2½ New Imperial); 2, A. A. Swan (2½ New Imperial); 3, R. N. Stewart (2½ Trump-Jap). (Won at 61.15 m.p.h. by 300 yards.)

550 c.c. SIDECARS ONE LAP SCRATCH RACE.—1, D. F. C. Fitzgerald (3½ Nortoo sr.); 2, J. Hill (3½ Douglas sc.); 3, R. Newitt (3½ Douglas sc.) (Won easily at 53.52 m.p.h.)

350 c.c. ONE LAP SCRATCH RACE.—1, A. Fraser (2¾ Sheffield-Henderson); 2, J. V. Prestwich (2¾ Coventry Eagle-Jap); 3, F. V. Jones (2¾ Coulson). (Won at 64.54 m.p.h. by 20 yards.)

500 c.c. TWO LAP SCRATCH RACE.—1, R. T. Grogan (3½ Norton); 2, E. A. Marshall (3½ Matchless-M.A.G.); 3, A. Fraser (2¾ Sheffield Henderson). (Won at 69.19 m.p.h.)

500-750 c.c. TWO LAP SCRATCH RACE.—1, C. C. Labin (6 Martiosyde); 2, R. N. Stewart (5 Trump-Jap); 3, E. Finch (5 Zenith). (Won easily at 75.12 m.p.h.)

INTER-CLUB TEAM RACE.—1, St. Albans; 2, North-West London.

UNLIMITED SOLO TWO LAP SCRATCH RACE.—1, R. N. Stewart (10 Trump-Anzani); 2, E. C. E. Baragwanath (8 Matchless); 3, E. Finch (8 Zenith). (Won at 82.08 m.p.h.)

1,100 c.c. PASSENGER MACHINES.—1, R. Godfrey (8 G.N.); 2, O. de Lissa (8 M.A.G.); 3, H. Martin (10 Morgan-Anzani). (Won at 68.42 m.p.h.)

INTER-CLUB RELAY RACE.—1, Luton and South Beds.; 2, North London; 3, N.W. London; 4, Bucks County.

The last event of the afternoon provided an extremely exciting finish. It was open to the first and second men in the previous races, and was won by C. C. Labin (6 Martinsyde) at 79.54 m.p.h., only three yards separating him from Godfrey's G.N.

# GUIDE TO LONDON—EDINBURGH RUN.

## A Record Number of Competitors; 129 Motor Cycles, 110 Sidecars, 20 Three-wheelers, and 133 Cars.

THIS year's London-Edinburgh run has broken all records so far as entries are concerned, there being 392 in all, consisting of 129 motor bicycles, 110 sidecar outfits, 20 three-wheelers, and 133 cars. Last year's 381 was the previous best.

The run starts on Friday evening next from Hendon at 7 p.m.; a skeleton route and time-table is on page 701. Kirkstone Pass will probably be the chief point of interest; the leading competitors are due there about 11 o'clock on Saturday morning.

Special caution will be required in negotiating Newark Bridge, which is at present under reconstruction, and only half the width of the road is available.

### ENTRANTS.

*Including official numbers, cylinder capacity, and registration numbers of the machines.*

The Editor does not hold himself responsible for the opinions of his correspondents.

**Correspondence should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, E.C.4, and must be accompanied by the writer's name and address.**

### *SHAFT DRIVES' UNPOPULARITY.*

Sir,—It occurs to me there are two points of some importance not brought out by your correspondents.

(1.) The relative efficiency of fairly heavy gears, substantially mounted and tested under laboratory conditions, is not a sure guide for lighter gears mounted on such a structure as a motor cycle frame. Whilst such a frame can be made fairly rigid fore and aft, the road wheel cuts out many of the possibilities of mounting a gear shaft soundly. When, under load, yielding takes place, it will certainly set up binding and loss of efficiency more readily with a gear shaft than with chain. Chain gear is admittedly a much more free and easy mechanism in this respect. Moreover, the resultant force of the chain pull is direct fore and aft in line with the frame's rigidity, whereas a gear shaft has twists and cross forces in other directions.

(2.) The F.N. people hold such a position as regards excellent workmanship, that it might not be safe for an average manufacturer with moderate resources and equipment to follow their lead. C.E.H.

Tunbridge Wells.

### *TEMPERAMENTAL ENGINES.*

Sir,—Having read "Ixion's" remarks on engines going "fey," I would suggest that unless he means that the engines have a premonition of impending dissolution, the word applicable is not "fey," but probably "daft." "Fey" does imply peculiarity of action, but also includes the idea of approaching death. SCOTSMAN.

London, N.W.11.

Sir,—I have noted with interest, through your correspondence columns, readers' experiences with Rudge and other similar machines which occasionally put on the pace. It is my opinion that so long as manufacturers will fit that abomination, the hand oil pump, these variations will continue.

Most riders of machines so equipped invariably over-oil, which will not allow the engine to rev. as it should.

Occasionally the oil pump is forgotten for 8 or 10 miles, the oil drag ceases, and the machine automatically accelerates.

Anyone who has a speedometer can prove this for himself by giving a pumpful of oil when the needle points to 35 or 40, and it will immediately drop back about 5.

W. F. ARNATT.

### *TOO FEW FAST "SEVEN-FIFTIES."*

Sir,—I was interested in the description of the new o.h.v. Blackburne twins in *The Motor Cycle* of May 18th, but could not help thinking that the cubic capacity of the larger model (71 × 97 mm., 768 c.c.) was rather badly chosen. The engine is obviously a sports model, and as such will presumably be popular as a speed mount, but it will have little chance to excel, as it is just too big for 750 c.c. class, and will therefore have to compete with such engines as the 8-valve Anzani. Surely a few millimetres off the stroke, reducing the capacity by 20 c.c. (748 c.c.), would have little effect on the power output?

I remember Zenith Motors used to market a "6 h.p. sports model," with a J.A.P. engine of 76 mm. × 85 mm. (770 c.c.), which although a "hot" proposition, was of little use for speed work, being just too big for the 750's, and, in the 1,000 c.c. class, quite overshadowed by the 90-bores and other 8 h.p. buses.

The Martinsyde and the new 6 h.p. Douglas are really the only "hot stuff" 750's we have—and a few more are badly needed; it seems rather absurd that at the present moment every Class D record should be held by a 500 c.c. engine. J. MALCOLM McINTYRE.

### *THE T.T. AND A PRIVATE OWNER.*

Sir,—Can you say why manufacturers who, owing to labour troubles, cannot supply machines or spare parts, can spare time and money, and neglect customers, to enter the T.T.? W.F.A.

Bournemouth.

### MOTOR CYCLE POLICE TO CONTROL TRAFFIC.

Just at present the daily Press is strongly agitating for motor cyclist patrols to control unruly motor traffic, and, although the dangers of the road are being greatly exaggerated, the idea is sound. However, the Metropolitan Police already have Triumph sidecar outfits which are being used for this purpose, and a most favourable report on the efficiency of the scheme has recently been issued by the Commissioner. On the other hand, one shudders at the possibility of hordes of solo police motor cyclists on 70 m.p.h. machines being released on the tortuous roads of Great Britain.

## AN AMATEUR ASSOCIATION.

Sir,—I can never cease marvelling at the spirit which seems to animate a number of motor cyclists. They appear to imagine (1) that the Trade and the A.C.U. are combined in a gigantic conspiracy to browbeat and suppress the "amateur"; (2) that trade riders are a race of supermen mounted on super-machines mysteriously different from what you can buy; (3) that if the A.C.U. were abolished amateurs would win many more pots. I know that this last thus baldly stated, sounds idiotic, but it is undoubtedly the impression given by many letters. It is, I suppose, impossible to convince the writers of such letters that—except for the T.T. and in some cases for Brooklands—manufacturers do not build special machines for their competition riders. Success in competitions is far more often won by attention to *every* small detail than by secret and mysterious factory alterations, and the reason the average amateur is not successful is that he will not take the trouble that the trade rider takes to see that everything is exactly right. As a rule the advocates of such things as an Amateur Association—who nearly always hide their light under the bushel of anonymity—do not even begin to realise the difficulty of defining an amateur. I will, however, suggest a definition which should satisfy the most spartan-minded and—incidentally—exclude practically every keen and capable rider, so that the anonymous grousers should have little difficulty in carrying off a few of the pots which they find so elusive. "An amateur motor cyclist is one who has never received free advice or assistance in any form, whose machine has never been returned to the makers to be tuned or overhauled, who does all his own tuning, and who belongs to no motoring club or organisation." The last is necessary, because if he is a clubman he might have associated with some of those supermen—trade riders—and overheard them disclosing "secrets" of tune, which naturally the "genuine amateur" could not know.

J. M. PHILPOTT.

Sir,—I have followed with interest the correspondence in your columns under the above heading, which has mainly arisen in consequence of the very wise, and only possible, decision which the A.C.U. came to regarding the proposal to hold an Amateur Road Race on the day between the Junior and Senior T.T. races.

The majority of your correspondents seem to suggest that the A.C.U. refused permission under pressure from the manufacturers, and that this being the case it, the A.C.U., panders to the manufacturers, and therefore it is necessary, or desirable, that an Amateur Association should be formed.

As a member of the Competitions Committee, and as a member for many years of the General Committee of the A.C.U., I can most emphatically state that the manufacturers neither direct, control, nor influence the decisions of the Auto Cycle Union, which is a democratic body composed mainly of private riders, the very constitution of which does not permit of anyone connected with the manufacture of motor cycles being on its Competitions Committee.

As one very closely in touch with the motor cycle manufacturers, I can state very definitely that there have been times, many times, when the trade has been at variance with the Union as regards competitions, competition regulations, and even as regards the organisation of the T.T. itself, very often because the regulations were framed, so the trade thought, too much in the interest of the motor cyclists of the country, and not sufficiently in their own. It is only quite recently that the trade has been invited to place its views before the Union in connection with matters which might affect it, such as regulations covering the technical, as opposed to the sporting, side of trials, in order to avoid putting the trade to unnecessary expense, though such considerations would not be allowed to interfere with the decisions finally arrived at by the Union, if they were in any way against the interests of the motor cyclists of the country, or liable to interfere with the development of the motor cycle as a utility and sporting mount, which is one of the main objects of the Union. Your correspondents do not appear to realise the difficulties of running an amateur road race, or, what is more important still, of defining an amateur and ensuring that none but amateurs entered in such a race.

This is the biggest stumbling block of all, and I think I may safely say that the Competitions Committee of the Union, who discussed this question at very great length, and explored every avenue and every suggestion likely to overcome the difficulties, mainly came to its decision not to allow the race, because there were so many difficulties in the way, particularly at such short notice, and because, most of all, of the difficulty of ensuring that only amateurs, whom the Union is out to protect and whose interests it is furthering all the time, should compete.

The fact that the trade supports many of the trials organised by the Union and its affiliated clubs does not in the least signify that the trade has any control whatever, either directly or indirectly, over the Union. In fact, it can be most emphatically stated that this is not the case. The trials are open to all, whether trade or private riders.

The greatest difficulty which faces trials organisers is that of deciding who is an amateur and who is not.

Most of us remember the discussion there was some time ago on the subject of "Shamateurs," and the difficulties to-day are as great or greater than they were then.

The A.C.U. is a thoroughly democratic body, run mainly by amateurs and sporting motor cyclists, for amateurs, and I challenge anyone to disprove this statement.

J. VERNON BROOK,
Chairman, Midland Centre A.C.U.

LADIES IN RELIABILITY AND SPEED EVENTS. Elsewhere in this issue there appears an article on competition riding for lady motor cyclists, but already the sport is more popular with the fair sex than many realise. These attractive pictures are of (left) three ladies in an Exeter trial and (right) two in South Wales speed trials.

### PILLION RIDING INSURANCE RISKS.

Sir,—Now that pillion riding has been officially pronounced free from any additional risk, one is inclined to wonder what excuse insurance companies have for increasing premiums by half if pillion passengers are carried.

In view of the result of recent inquiries into the safety or otherwise of pillion riding, the increased charge would seem to be quite unjustifiable. "ARIEL."

Devon.

### 250 MILES IN A DAY WITH A TWO-STROKE.

Sir,—I read with interest your correspondent's, Mr. H. C. Sharp's, letter concerning the reliability of his Baby Triumph. Last year I purchased an Enfield two-stroke, and having heard that these "babies" were not much good for long-distance touring I decided to try for myself, and contradict this statement. Accordingly I undertook a journey from Chester (Cheshire) to Worthing (Sussex), and successfully accomplished this 250 mile journey in one day. Starting from Chester at 6 a.m. I arrived at Worthing at exactly 6.30 p.m., having made a non-stop run excepting one hour for lunch and only one road stop for a small puncture.

Chester. BABY ENFIELD.

### 4 H.P. AEROPLANES.

Sir,—I have read with interest the various correspondence on "4 h.p. Aeroplanes" that started as a consequence of "Ixion's" comment.

It is, of course, obvious from the point of view of both theory and practice that the 4 h.p. aeroplane is a long way off. I note that Mr. P. J. Robinson considers the h.p. limit is 16 h.p., and quotes the de Pischof machine as a good example. I think, however, that this figure could be considerably lowered if sufficient time and research were given to the subject. It is a matter of history that Mr. A. V. Roe, in 1909, flew with a triplane fitted with an 8-10 h.p. engine. I am open to correction on this last statement, but I know it was somewhere very near the 1,000 c.c. mark, and it was, if my memory still serves, a V-twin J.A.P. Would Messrs. Prestwich & Co. care to confirm?

In view of the extraordinary advance in aeronautics since the year 1909, I think that it is by no means an exaggeration to say that a 10 h.p. aeroplane of to-day would not only be practical but would also be very economical and satisfactory. All this, of course, assuming a single seater.

C. F. CAUNTER.

### CLIMBING JACOB'S LADDER.

Sir,—Your correspondent, Mr. Cyril Styning, writes you re the Jacob's Ladder road in Derbyshire. I was waiting to see who would "discover" this hill, as it has long been one of my favourite runs; although, I must admit, it is rather a strenuous occupation—not only up the hill, but down the other side to Kinder. I christened this latter side "crank case gully," as I always bash my silencer in on the projecting rocks. Mr. Styning possibly saw my wheel-marks.

I should say that this is the worst (or best) "discovered" Derbyshire hill as yet, but I know a good few places that "put the wind up" worse than the Ladder.

I should like to see a sidecar attempt.

For the benefit of those who are out for a bit of fun, the Jacob's Ladder is on the Edale-Hayfield road.

Does anyone know the gradient? P. H. DUDLEY.

### NEGLECTING THE SPORTING SIDE.

Sir,—The Amateur Road Race controversy and Mr. Rutherford's use of the oft-repeated contention that the T.T. races are held with the avowed object of "improving the breed" serve to emphasise the deplorable drift of motor sport into the realms of commercialism. Nowadays, competitions only too often are run more or less solely with the apparent object of providing advertisement matter for the makers. This would provide an incidental value to compensate for the deterioration of the purely sporting side, provided that machines strictly of the "same-as-you-can-buy" variety were used. Unfortunately, this is not done, and members of the public are faced with the option of basing their choice of a machine upon entirely false data, or of buying their experience as to which type suits their requirements best at very much their own expense. Roughly, the makers may be divided into two classes: (1) those who advertise their competition machines as being "perfectly standard," and (2) those who frankly make use of models which bear not the slightest resemblance to those offered to the public.

If genuine amateurs on machines bought in the ordinary way were given greater encouragement in competitions by the A.C.U., not only would the sport be placed upon a cleaner basis, but the buying public would have a reliable indication of the capabilities of the various motor cycles, and the makers, whose products really *were* superior, an invaluable advertisement.

In brief, one good performance by an amateur on a standard machine is worth, from the standpoint of advertising value, a cart-load of cups and trophies won by a professional mounted upon a machine "the-same-as-you-*cannot*-buy." INTERESTED.

Kent.

—/ —/ —/ —/

Sir,—I see from your report of the performances on Sheriffmuir Hill, in the recent Scottish trial, that a Mr. Watson-Bourne "pushed his big Brough-Superior up at speed." It was a large hill, and it seems to me that this was a most remarkable performance, for it is as much as I can do to push quite a small scooter up Dashwood. Perhaps he will tell me whether he prefers Oxo or Bovril when training, as I want to enter for a trial myself, but cannot decide which of these is the better preparation. I should be very grateful for his advice. BEGINNER.

Oxford.

P.S.—And does not his misfortune emphasise the need for some form of pedalling gear when a really severe trials course has to be negotiated, as in Scotland?

### SANS MAGNETO.

Sir,—Some time ago—I believe last year—a correspondent stated that his Levis had taken him to his destination quite nicely and that his magneto chain had been picked up a quarter of a mile away by a pedestrian, who saw it drop off.

To-day my Scott showed symptoms of pre-ignition—yes, they were mica plugs—so I stopped to change them. Having done so I could not restart.

After an exhaustive and exhausting investigation, I found I was minus the magneto chain, which any amount of hunting for a mile along the road failed to find. Nor was it in the bike.

Another correspondent (not in *The Motor Cycle*.—Ed.) says he knows a Scott which goes without oil and that he had owned one that was quite all right without water. Now if someone will cite an authentic case of running without petrol or like fuel we shall be quite certain that the Scott is the best bike. F. J. D.

Gloucester.

## Books & Maps for Motor Cyclists.

Issued in conjunction with *The Motor Cycle.*

**"MOTOR CYCLES AND HOW TO MANAGE THEM."**
The standard handbook on the motor cycle.
Price net, 2/6. By post, 2/10.

**"HINTS AND TIPS FOR MOTOR CYCLISTS."**
Eighth Edition. Price net, 2/-. By post, 2/3.

**"TRACING MOTOR CYCLE TROUBLES."**
A system for tracing motor cycle faults and of remedying them when found. Fourth Edition.
Price net, 2/-. By post, 2/3.

**"TWO-STROKE MOTOR CYCLES."**
A reliable treatise on Two-strokes, from the rider's point of view. Price net, 3/-. By post, 3/3.

**"MOTOR CYCLE REMINISCENCES."**
By "Ixion," of *The Motor Cycle.*
Cloth Bound. Price, 5/-. By post, 5/3.
Paper Boards. Price, 2/6. By post, 2/9.

**"THE MOTOR CYCLE" ROAD MAPS.**
**Set of Three Maps—England and Wales, Scotland, London.** Set of three, complete in case. Price net, 5/6. Book post, 5/10. **Set of Two Maps—England and Wales, London.** Price net, 4/6. By post, 4/8.

**"THE MOTOR CYCLE" ROUTE BOOK.**
With 32 pages of Road Maps. Price net, 2/6. By post, 2/10.

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., Dorset House, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 2d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

### TUNING UP FOR SPEED.

I have a 3½ h.p. Norton fitted with a Philipson Pulley. I wish to get it tuned up for very fast work. Will you kindly give me a few tips for doing so?—E.J.E.

There is nothing much you can do to the machine beyond seeing that everything is in perfect order, the valves ground in, rings in good condition, timing correct, and valve springs of adequate strength. Particular attention should, of course, be paid to such details as tappet adjustment, and experiments should be carried out as to the correct size of jet.

### LEAKY HEAD JOINTS.

I have experienced great trouble with the joint between the cylinder body and head of my engine; the packing repeatedly blows out. I have tried asbestos string and size, and various proprietary jointing mediums, all to no avail. I do not wish to go to the extreme of brazing or welding, unless this is the only way out of the difficulty.—D.F.

A proper copper and asbestos washer should be adequate. If the surfaces of the joint are clean and true there should be no difficulty in getting a gas-tight joint.

### METAL CLUTCH ADJUSTMENTS.

When taking down a 1918 B.S.A. gear box is it necessary to take the clutch worm off, and if so, after removing the worm nut, is the piece that holds the worm a cone? I have had all the nuts and wheels off the end plate, but I could not move this fitting. Has this gear box a cork clutch, and if so is an amateur able to repair it, or would you advise new plates, as I think mine are worn, as the machine will not start until given a push, even when the clutch is right in?—J.H.H.

Yes, before you can take off the clutch operating worm you must remove the small cone inside. The clutch consists of metal plates, and it is rather difficult to dismantle, and we would advise you to return the clutch complete to the makers for attention. Probably the plates are worn, or the springs may be weak; if the machine has had much use the trouble may be due to slight wear on the clutch shaft in the form of ridges on which the plates bind, and so do not close up properly

### TYRE SIZES AND SPEEDOMETERS.

I intend to fit oversize tyres to my machine; the present tyres are 650×65 mm. (1) Could I fit 28×3in. or 700×80 mm.? (2) Would this make any appreciable difference to the gear ratio or to a speedometer?—J.S.C.

(1) If the rims take 650×65 mm. tyres, the correct oversize is 700×80 mm. (2) A slight difference would be made to the speedometer reading.

### JET SIZES.

I ride a Scott with a Binks carburetter. What are the three best jets to use for sidecar work?—G.W.A.

The jets advised are 000, 2, and 7, or perhaps 8, for sidecar work. 000 should be the centre, No. 2 the right, and No. 7 or 8 left-hand. This, of course, is looking at the carburetter from the air intake. We should advise you, however, to experiment with various sizes, as no two engines are exactly alike.

### TWO-STROKE EFFICIENCY.

What is an extension pipe on a silencer for? My two-stroke has small holes in the end plates, but if an extension pipe is an advantage I want to fit one. Is variable ignition better than fixed ignition for a two-stroke?—E.E.

The use of an extension pipe is for further reducing the noise of the exhaust gases. Variable ignition is, on the whole, more satisfactory than fixed ignition.

### VALVE TIMING AND TAPPET CLEARANCE.

What is the correct valve timing and tappet clearances for a flat twin Wooler.—A.B.

The valve timing of the Wooler is quite a simple matter as the timing wheels are marked, and it is only necessary to get the marks "1," "1," and "0," "0" to correspond and the numbers truly in line. The valve clearance should be equal to the thickness of the blue cover of *The Motor Cycle*.

### MYSTERIOUS SPARKS.

I have a 1920 Harley Davidson (electric model), and on starting the engine, or when it is pulling over heavy roads, there are flashes just where the control lever fixes on to the distributor cap.—S.M.

The trouble is probably due to the fact that the fibre washer at the end of the rod, where it fixes on to the distributor cap, is cracked or missing, and this should therefore be replaced.

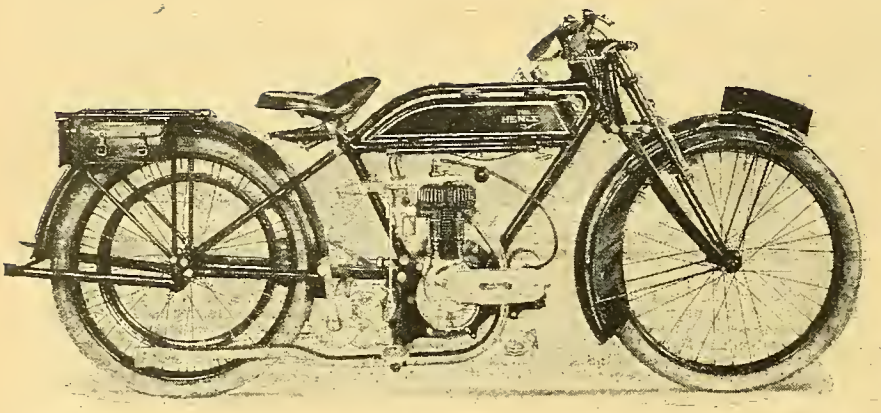
### CAUSE OF A SEIZURE.

Whilst riding a 1920 Triumph (chain-cum-belt) with passenger on pillion and doing fully 40 m.p.h., the engine stopped suddenly and the back wheel skidded 20 or 30 yards. I could find nothing wrong, and on restarting everything appeared to be in order. What was the cause?—H.H.W.

The trouble is due to pre-ignition owing to the use of a faulty or unsuitable plug. A piston seizure, even temporary, would leave its mark on the cylinder and piston.

## Important Dates.

**Thurs., June 1st—Senior Tourist Trophy Race.**
**Fri., June 2nd, and Sat., June 3rd—M.C.C. London-Edinburgh Run.**
**Mon., June 5th, to Sat., June 10th—Royal Scottish A.C. Light Car Trial.**
**Sat., June 10th—B.M.C.R.C. Open Meeting at Brooklands.**
**Sun., June 11th, to Mon., June 19th—Paris-Pyrenees Trial.**
**Sat., June 17th—Yorkshire Centre A.C.U. Open "Colonial Trial."**
**Sat., June 17th—Ealing and Dist. M.C.C. 200 Mile Sidecar Race, Brooklands.**
**Fri., June 23rd, and Sat., June 24th—Irish Twenty-Four Hour Open Trial.**
**Sat., June 24th—M.C.C. Inter-club Team Trial for "The Motor Cycle" Cup.**
**Sat., June 24th—Midland Centre A.C.U. Open Reliability Trial.**
**Sat., July 1st—East S. Wales Centre A.C.U. Open Speed Trials.**
**Wed., July 5th—Eastern Centre A.C.U. Open Speed Trials.**
**Wed., July 12th—French Grand Prix.**
**Sun., July 23rd—Belgian Grand Prix.**
**Fri., July 28th, to Mon., July 30th—Anglo-Dutch Trial in Holland.**
**Thurs., Aug. 3rd, to Wed., Aug. 9th—International Six Days Trials.**
**Sat., Aug. 5th, and Mon., Aug. 7th—Irish Two-day Open Trial.**
**Mon., Aug. 7th—West S. Wales Centre A.C.U. Open Speed Trials at Pendine.**
**Sat., Aug. 12th—North Wales Centre A.C.U. Open Reliability Trial.**
**Sat., Aug. 12th—Motor Cycle Races in Phœnix Park, Dublin.**
**Mon., Aug. 21st, to Sat., Aug. 26th—A.C.U. Six Days Trials.**
**Sat., Sept. 23rd—500 Mile Race at Brooklands.**



In addition to the model last illustrated in "The Motor Cycle," the Henley is also obtainable with a Blackburne engine at £73 10s. solo, with three-speed gear and final belt drive.

### UNCERTAIN SPEEDOMETER READINGS.

The pointer of my speedometer has suddenly ceased to move evenly, and swings about all over the dial, the mean of the swing being approximately correct. I should be glad to know if this can be put right by some simple method, or whether it is a job for the makers.—E.H.L.

Undo the flexible tubing union underneath the instrument and squirt oil by means of a force feed oil can down the flexible tube, when we think you will find that the swinging of the needle will cease.

### VISIBLE SPARKS AND NOISY GEAR-CHANGING.

(1) Why (in damp weather more especially) can I plainly see a spark on the top of the carbon brushes of my magneto? The magneto in question is fitted to a 1917 Clyno. (2) I have difficulty also when starting off in engaging the low gear without a terrific grinding noise. Is the gear box lubrication at fault?—J.C.W.

(1) Probably this is a current leakage due to wet weather. New brush holders might cure the trouble. (2) The trouble is due to the clutch not being properly free before engaging the gear; it may be necessary to wash out the clutch with paraffin.

### REMOVING A TWIST GRIP CABLE.

I have a 1916 Harley-Davidson, and I cannot find a way to get a broken exhaust wire from the handle control (left grip). I have taken the cap from the handle, but there I am stuck, as there do not appear to be any other screws and nuts to come undone.

The procedure is as follows: Remove the large handlebar end screw and the grip comes straight off. Then remove the two small rollers and pins upon which it operates. Next, with a screwdiver push the handlebar plunger and control wire entirely out of the handlebar. Release the outer casing by removing the frame clip, and loosen the two sleeve screws which hold the control wires. Fit a new wire to the handlebar plunger, feed it through the outer casing, and re-assemble.

### ERRATIC ELECTRIC LIGHT.

A short time ago the accumulator of my Lucas lighting set did not keep its charge for more than three weeks, so I had to put it on a slow charge and add fresh acid. After this I did not use the machine for a couple of weeks, and then, on starting the engine and putting the switch into the "lamps" position, the head lamp rose to such a brilliancy that it fused. Also the electric horn sounded much louder than usual. The voltage appears to rise considerably above the ordinary six or seven volts. When the accumulator is used without the dynamo the light is not steady and flickers slightly, and the tone of the horn varies. Does the fault lie in the dynamo or the accumulator?—A.L.F.

The trouble is probably due to the following cause: bad or loose connections on the junction box or battery, so that the current from the dynamo, instead of going through this battery, is going direct to the lamps and burns them out. We should recommend you to look over all connections, tighten everything, put an ammeter in the circuit between the No. 5 wire and the terminal marked No. 5. Then start the engine and you will see whether the dynamo is charging or not.

## EXPERIENCES WANTED.

*Readers' replies to questions published under this heading should be addressed c/o The Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, when they will be forwarded direct to the querists concerned. Requests for experiences should be accompanied by a stamp.*

"J.H.R." (Walton).—Triumph Junior with W.S.R. variable jet.

"R.W.R." (Thanet).—Challenger, Jeff, etc., self-sealing tubes.

"A.R.S." (Manchester).—293 c.c. Connaught modifications to part design for speed; other timing limits; durability.

"H.E.R.M." (Winchester).—349 c.c. A.J.S; most suitable oil; easy starting; riding position; Showell pump; reliability.

## SPARKLETS.

### Six Nortons for Grand Prix.

Six Nortons in all have been entered for the Grand Prix, which will be run off near Strasbourg on July 12th.

### Duplicated Records.

When Emerson (494 Douglas) broke the 50 miles and hour records in Class C (500 c.c.), he also gained those in Class D (750 c.c.).

### Continental Extension of Tyre Makers.

Goodyear Tyres may now be purchased in Paris, the French company being known as La Société des Pneumatiques et Caoutchoucs Goodyear, 49, Rue de Ponthieu, Paris.

### Unbreakable Petrol Pipe Unions.

Specially soldered petrol pipe unions which are claimed to be unbreakable are made by W. G. Wilder, 16 and 17, Key Hill, Birmingham. A special type of hard solder is employed.

### How to Get to Epsom.

We are indebted to the A.A. for lucid maps showing how best to get to the Epsom Summer Meeting. This information will be gladly given to members who apply for it at Fanum House, Whitcomb Street, London, W.C.2.

### Tappet Clearances on Blackburne Engines.

For the purpose of accurately setting the valve clearance on Blackburne engines, Burney & Blackburne, Ltd., Atlas Works, Bookham, Surrey, supply a pair of gauges at the price of 1s. 2d., post free.

### Change of Address.

The manufacture of the Holroyd sports model motor cycle is now undertaken by J. S. Holroyd, Motor Engineer, East Street, Farnham, Surrey. Mr. Holroyd is also the manufacturer of an ingenious belt fastener and a transmission shock absorber.

### Bat Redivivus.

It would have been a pity had the manufacture of the Bat motor cycle been completely discontinued, as this machine has been almost continuously on the market since 1902. The stock and necessary plant of the old company have been acquired by Messrs. S. T. and F. H. Tessier, sons of H. T. Tessier, who conducted the manufacture successfully for many years; the business will be continued on the old lines. A complete range of J.A.P. spares will be carried, and repairs to J.A.P. engines will be undertaken, while a stock of Bat spares is being manufactured and will shortly be obtainable.

### Catalogues Received.

G.N. Motors, Ltd., East Hill, Wandsworth, London, S.W.18. An excellently illustrated and numbered spare parts list for G.N. cycle cars.

The Willowbrook Motor Co., Willowbrook Works, 282, Belgrave Gate, Leicester. A catalogue of Willowbrook sidecars of various types and prices, suitable for one or two persons. Sidecar fittings, such as hoods, screens, and side curtains are also listed.

THE FAMOUS

"JAMES"

Newcastle-on-Tyne,
March 21, 1922.

I might say although my "James" 4¼ H.P. is 1914 it still runs like a clock; have never had a stop on road through engine trouble. I have averaged about 100 miles each week-end this winter.

"TREWSO."

IMPERVIOUS TRADE MARK

## RITCHIE PATENT SPLIT OVERALLS

**In Two Styles—"TREWSO" and "TAB."** *Patent No.* 10677.

**Specially designed to meet the requirements of the business man, doctors, and all those wanting a quick on and off suit without soiling hands or clothes no matter how dirty the weather, and give absolute protection.**

"TREWSO" style are fastened with two long springs and tab at knee.

"TAB" style are fastened with four patent undamageable press studs.

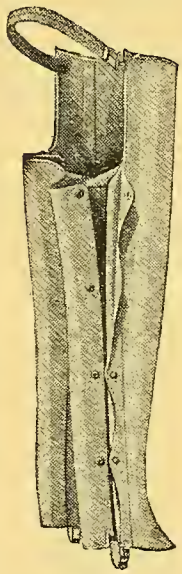
*Nothing "just as good." The world's best in workmanship.*

"IXION" in his "Occasional Comments" in "The Motor Cycle" says—"The best of its kind and I know of nothing to beat it."

**THE IMPERVIOUS WATERPROOF CLOTHING is guaranteed to keep you dry under all conditions of weather. All proofings guaranteed for two years against decomposition. The only clothing that stood the test in Copenhagen for the 200 miles Trials in a heavy downpour of rain.**

**Can be procured from all the principal Rubber Shops and large Retail Warehouses.**

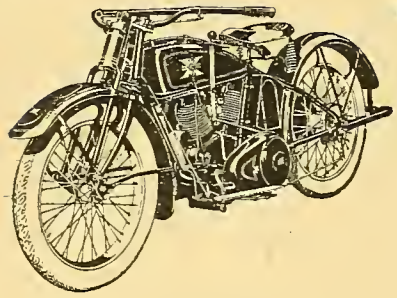
**Wholesale from all the principal Accessories Factors.**



"TAB."

*Sole Manufacturers:* **The IMPERVIOUS RUBBER Co., Ltd.,**

**38, FALFIELD STREET, GLASGOW.** Wholesale and Export Only. Telegrams: "Impervious, Glasgow."



The most advanced machine in the "big twin" class, *with electrical equipment*, is now obtainable at the startlingly low price of only

# £120

This is the price of the latest model

# AMERICAN "X"

This machine is ideal for either solo or sidecar work, having ample power and speed; the finish is now much improved, and the lubrication system has been re-designed, ensuring perfect lubrication in proportion to engine speed.

*Full details of this remarkable value-for-money twin will be sent on request to—*

# SPLIT LEGGINGS.

"I know of nothing to beat it, and it deserves to be better known."—*"Ixion" in "Motor Cycle" of 17th March in describing the "Split" Overalls.*

**The suit is put on and off in a few seconds, no pulling over dirty boots, nor soiling your hands.** They open right down outside of leg, and are fastened with two springs. There is absolute freedom and comfort, combined with neatness, and they are guaranteed to keep you dry under all conditions of weather. This is the only suit that kept out the terrible wet weather in the Reliability Trials at Copenhagen, when clothing was included in these trials.

# Sales Manager Wanted.

*A real chance for the right man.*

A WELL-KNOWN firm of Northern Motor Cycle Manufacturers, having big plans for the development of their already successful business, seeks a sales manager capable of carrying them out.

The machine is one of the best in the country with a fine record of successes. The manufacturers realise that they must pay the right man well, both in salary and a percentage on sales. Applications are invited from those possessing an intimate acquaintance with the trade, organising and constructive ability, and able to submit first class credentials.

*All communications (marked personal) will be treated in strictest confidence by*

THE MANAGING DIRECTOR,
St. James's Advertising and Publishing Co., Ltd.,
1, Wardour Street, London, W. 1.

# MISCELLANEOUS ADVERTISEMENTS.

## PRICES.

ADVERTISEMENTS in these columns First 12 words 3 –, and 3d. for every ad- ional word. Paragraphs of under 3 words e charged double rate. Each paragraph is arged separately. Name and address must counted. Series discounts, conditions, and ecial terms to regular trade advertisers will quoted on application.

Postal Orders and Cheques sent in payment for vertisements should be made payable & Co. LIFFE & SONS Ltd., and crossed easury Notes, being untraceable if lost in nsit, should not be sent as remittances.

All advertisements in this section should be ompanied with remittance, and be addressed the offices of "The Motor Cycle," Dorset ouse, Tudor Street, London, E.C.4. To sure insertion letters should be posted in ne to reach the offices of "The Motor Cycle," the first post on Friday morning previous to e day of issue. Advertisements that arrive o late for a particular issue or that are owded out will automatically be inserted in e following issue unless accompanied by tructions to the contrary.

All letters relating to advertisements should ote the number which is printed at the end of h advertisement, and the date of the issue which it appeared.

The proprietors are not responsible for clerical printers' errors, although every care is taken void mistakes.

## NUMBERED ADDRESSES.

or the convenience of advertisers, letters may be ressed to numbers at "The Motor Cycle" Office. en this is desired, the sum of 6d. to defray the cost of stration and to cover postage on replies must be added he advertisement charge, which must include the ds Box 000, c/o "The Motor Cycle." Only the number appear in the advertisement. All replies should be ressed No. 000, c/o "The Motor Cycle," Dorset House, or Street, London, E.C.4. *Readers who reply to Box No. rtisements are warned against sending remittance through ost except in registered envelopes; in all such cases the of the Deposit System is recommended, and the envelope ld be clearly marked "Deposit Department."*

the case of motor cycles offered for sale under a box ber, as it is unusual for these to be sold without first g inspected by the intending purchaser, advertisers will likate business by embodying in their advertisements e mention of the district in which the machine ed may be seen and tried.

## DEPOSIT SYSTEM.

sons who hesitate to send money to unknown persons deal in perfect safety by availing themselves of our osit System. If the money be deposited with "The or Cycle," both parties are advised of this receipt. he time allowed for a decision after receipt of the s is three days, and if a sale is effected we remit the unt to the seller, but, if not, we return the amount e depositor. Carriage is to be paid by the buyer, but e event of no sale each party pays carriage one way. seller takes the risk of damage in transit. For all sactions up to £10, a deposit fee of 1 - is charged; on sactions over £10 and under £50, the fee is 2/6; over and under £75, 5 -; over £75 and under £100, 7/6; on all transactions over £100, 1%. All deposit ers are dealt with at Dorset House, Tudor Street, on, E.C.4, and cheques and money orders should be e payable to Iliffe & Sons Limited.

he letter "D" at the end of an advertisement is an ation that the advertiser is willing to avail himself of Deposit System. Other advertisers may be equally ous, but have not advised us to that effect.

## SPECIAL NOTE.

Readers who reply to advertisements and receive no er to their enquiries are requested to regard the s as an indication that the goods advertised have dy been disposed of. Advertisers often receive so y enquiries that it is quite impossible to reply to one by post.

## MOTOR CYCLES FOR SALE.

### A.B.C.

21 A.B.C., dynamo lighting, speedometer, as new; £80.—Ratcliffe Bros., 200, Gt. Portland St., [3099

*It would help you*

in selecting a new machine to have before you in convenient form a list of all the most popular motor cycles and combinations.

## "1922 MODELS"

is a booklet we have just issued giving brief details of all these machines and showing the latest list price of each. It also explains in detail how the purchase of a motor cycle under our deferred payment system is carried out.

Let us send you this booklet and follow it up with fully illustrated catalogues of the selection from which you decide to make your final choice.

If you have a machine that you wish to exchange we shall be pleased to allow you a fair price for it in part payment for a new one.

Our stock list of

## SECONDHAND MACHINES

contains an excellent variety of makes and models.

Shall we post you a copy?

It is a rigid rule of our business to completely overhaul every second-hand motor cycle we offer, and we issue a full guarantee with each. You can, therefore, be quite certain of the reliability of any machine purchased from us.

Our deferred payment system applies to second-hand motors as well as new ones.

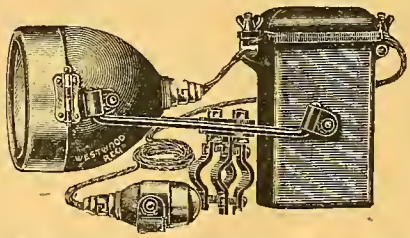
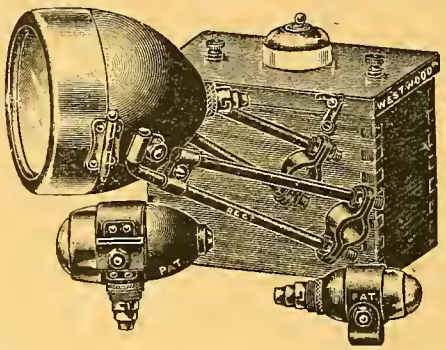
## "DAYBEAM" Electric Solo Set



The Headlamp supplied with this set is our 5in. Daybeam, a very powerful light-giver. The brackets are of exceptionally strong and handsome design. They carry the headlamp and also the (die cast) aluminium case. The accumulator is specially made for motor cycle lighting, and will brilliantly illuminate the head and the rear lamp for 20 hours if used intermittently. The tail lamp (our torpedo S.B.C.) is exceptionally strong and well made, and has a very attractive appearance. Each lamp is fitted with a switch, and one lamp may be used independently of the other. The outfit is despatched completely assembled, and 4 volt bulbs are fitted. The finish is ebony black and nickel plate.

Complete Outfit, List No. 30/1, Price £5 5 0

## "DAYBEAM" Combination Set



The set comprises Daybeam 5in. Headlamp, Ideal Sidecar Lamp, and Torpedo S.B.C. Tail Lamp. Each lamp is fitted with an independent switch, and is finished in ebony black with nickel-plated relief. The Accumulator (capacity, 6 volt, 40 amp.) is specially made for motor cycle lighting and will give very satisfactory service in use.

Complete Outfits, List No. 30/2, Price £7 7 0

33⅓ MORE MILEAGE ■

A REAL RUBBER NON-SKID

MOTOR CYCLE COVER.

has been designed to withstand the kick of any motor cycle engine yet made and to last out any other make. These covers are a combination of everything that is best in tyre manufacture based upon expert knowledge obtained during the past 12 years we have been advertising motor cycle tyres of various makes in this journal.

THE ELITE SUPER NON-SKID

is a true non-skid, not merely a fancy pattern, as we have embodied all the true principles that go to make a non-skid—viz., Side Ribs, Cross Bars and Suction Cups.

THE ELITE SUPER NON-SKID GUARANTEES YOU AT LEAST 33⅓% MORE MILEAGE

than you have obtained from any other make, no matter what the price.

As certain sizes will shortly be withdrawn from all manufacturers' lists as non-standard, we have not laid down moulds in the Super Non-skid pattern; but for the convenience of our customers have made arrangements to supply these non-standard sizes in a Three-Ribbed Pattern which is exactly of the same construction and weight.

| ELITE SUPER NON-SKID COVERS. | | | ELITE THREE-RIBBED COVERS | | |
|---|---|---|---|---|---|
| Size. | Cover. | Tube. | Size. | Cover. | Tube. |
| 26×2¼ | 37/6 | 8/9 | 26×2 | 36/- | 6/3 |
| 26×2½ / ×2¼ | 49/6 | 8/3 | 26×2½ / 26×2¼ | 47/6 | 7/3 |
| 28×3 | 62/6 | 9/6 | for 2½ rims | 49/6 | 8/3 |
| 26×3 or 700×80 | 59/6 | 8/9 | | | |

## Have you ever been disappointed?—

**Not when you order your Douglas or Williamson Spares from me. Any part for any model by return of post. Try my service.**

**You will appreciate this convenience** for 4 h.p. Models. A funnel, Oil Filler, and Crankcase Compression Reducer combined. Neat and out of the way of dirt. You can get the last drop out of a can without soiling your hands; fitted in a jiff. Price only **10/6.**

### A "DOUGLAS!" A "DOUGLAS!"

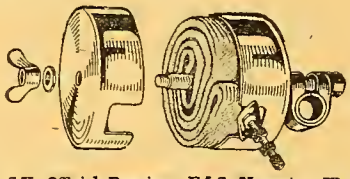
The luck-bringer for 1922. Douglas badge with a silk tartan muffler in Douglas tartan colours for the coat or blouse. Only LIGHTER PISTONS not only mean more speed and power, but less load on the con. rod and big ends. This new radiated piston is beautifully made and fitted with gudgeon and light twin rings. It will give you at least 1,000 more revs. per minute and 10 m.p.h. more speed. Price complete, **14/6** each.

### ZOOM! ZOOM!!

is now recognised as not only the fashionable but the most efficient exhaust system designed. It has a lovely Zoom and has a volume many times larger than the cylinder. Absolutely no back pressure, beautifully made, and finished in burnished copper or nickel plate. Price only **30/-** in burnished copper finish; or **33/6** nickel plated.
Honestly adds £10 to any Douglas.

**The Original** and still the best alloy valve cap for 4 h.p. and 2¾ h.p. Douglases. Prevents knocks. Keeps engine cool. Used by T.T. riders and Grand Prix winners. Price **4/-** each.

**The Tony Combined Footrest and Footboard is beautifully** made and finished. It gives a change of position and keeps your feet clean, smartens up your mount and makes it look an R.R. Great value. Only **30/-** per pair.
**WHY RISK damaging a new tube** when you can carry it safely and securely in an all-aluminium tube carrier? Cannot chafe and preserves the tube. Used by most competition riders including J. A. Newman, Esq. Price **10/6.**



**A.C.U. Official Repairer, E.I.C. Magnetos, West of England Service Depot.**

## The Tourist Trophy Races.

ANY critic who favoured a change from the Isle of Man for the Tourist Trophy Races must have wavered in his opinions after last week's events. No more thrilling and instructive races have ever taken place. They were a triumph of organisation for the Auto-Cycle Union, and the results were a triumph for British manufacturers and riders. The races were fought out with remarkable keenness, all previous records were broken both for individual laps and for the full duration of the course. The Senior event in particular provided remarkably keen competition, and the pace was so hot that the proportion of survivors—22 out of 67 starters—was inferior to the other events. In the Lightweight Race fourteen of the thirty-one starters reached home, and of the thirty-seven starters in the Junior Race, sixteen survived the ordeal. On the question of valve disposition, apart from the runaway victory of overhead valve engines in the Junior Race, and the ascendancy of the two-stroke engine in the small and large classes, no definite conclusions may be drawn by the public.

### Varied Types of Engines.

The Senior Race in particular provided a remarkable medley of engine types, for whereas a side-by-side valve engine led the field throughout, an overhead four-valved engine was second with two-strokes in the third and fourth positions. This result would confirm that progress in design is of a general all-round character, and not confined to any one type or design; capacity is the paramount factor, of course, and whether overhead, side-by-side valve or two-stroke engine be used, the best designs exhibit little advantage one over the other either in speed or hill-climbing. Single-cylinder machines, assisted by their preponderating numbers, commanded the greatest attention, and once again the seal of success is placed upon two- or three-speed gears and chain transmission.

Last year's report that the Isle of Man course was unsuited to 500 c.c. machines and tended to favour slower mounts were to some extent belied by the truly phenomenal speeds attained last Thursday. On the other hand, we have the evidence of this year's winner that no racing track in his experience introduces such a large personal factor as the Manx Snaefell mountain course.

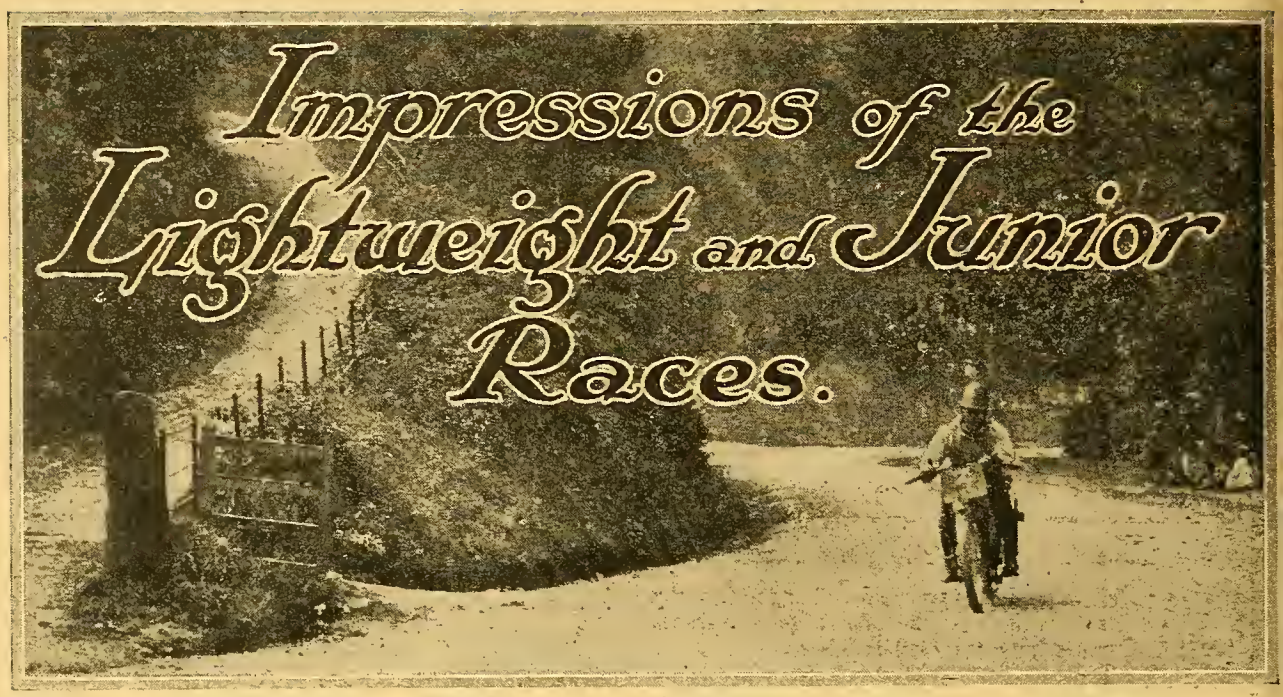
### Points to Criticise.

One suggestion which we would throw out now for immediate consideration by the A.C.U. is the banishment of a marquee for the storage of competing machines. Unless a permanent shelter under lock and key can be arranged, it would be preferable for the examination process to be simplified down and effected on the morning of the event. Competitors emphatically are not content to entrust their mounts to the bare protection of a tent, competition being what it is in modern times.

Reports from all quarters would indicate convincingly that never has interest in the Motor Cycle Tourist Trophy Races been so pronounced, and though fewer actual visitors were on the Island, this can at once be explained by the unsuitability of the date chosen. Clearly a pre-Whit-week for the T.T. is wrong, seriously interfering as it does with works' outputs at the busiest season of the year, and furthermore restricting the influx of visitors to the sporting little island.

One other matter calls for comment, *i.e.*, the undesirable bartering which precedes the races in connection with items of equipment. Last-minute changes in this direction were numerous, and, unless checked, the practice will tend to jeopardise the present high esteem with which motor cycle racing is regarded.

An index to the advertisements in this issue will be found on the page facing the back cover.



# Impressions of the Lightweight and Junior Races.

## The Return of the Two-stroke; the Invincible A.J.S.; and two ill-starred "Dark Horses."

AN *entrée* can never be as satisfying as a joint, but it is often more savoury. Pursuing the analogy, the Lightweight Race is the *hors d'œuvre* of our Manx meal, the Junior is the *entrée*, and the Senior is the roast beef. All three are to be anticipated with pleasure, and rolled on the palate; but the order of their importance is inexorably the same, viz.: 1, Senior; 2, Junior; 3, Lightweight.

Reverting for the moment to their order on the menu, one may enjoy a good dinner on two main systems. By the first method you select your favourite dishes, know exactly what is going to be dished up, and like it because it is better than ever it was. Or, alternatively, you may put yourself, bound and blindfold, in the hands of the *chef* and await delicious surprises. The Baby race was on these latter lines.

### Grandfather of all 2-strokes.

Said I to myself, said I, "These babies are all a little young. Some precocious engine will come out all by itself. Two-strokes melt their pistons in sustained speed. So the dominating stable will be four-stroke. Perhaps the J.A.P. Perhaps the Blackburne. Certainly *not* a two-stroke!" *What* fools we mortals be. The Levis is the great grandfather of all the two-strokes. Even the Scott is merely its great, overgrown hobbledehoy of a son.

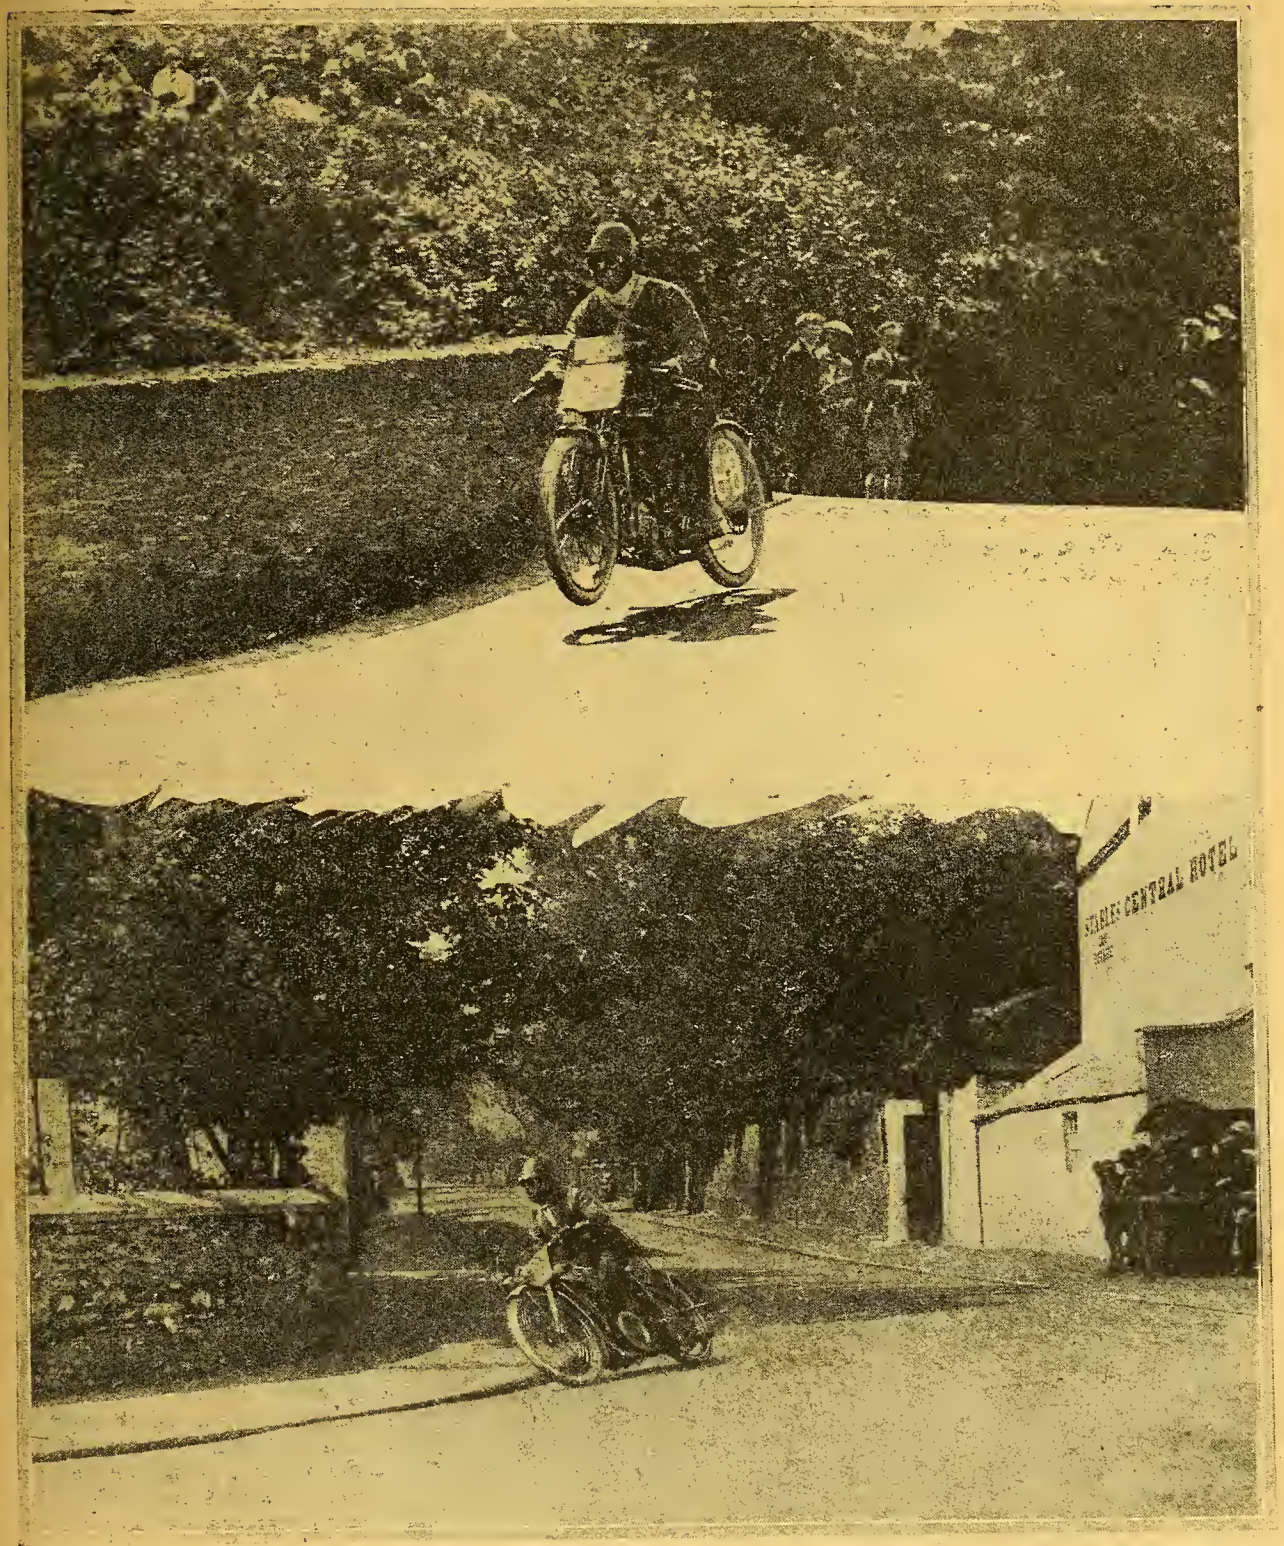
At the end of lap 1 Handley's O.K. was leading the fastest Levis by 11s., and Pike's Levis stood fourth, sandwiching a J.A.P. engine with that prince of riders, Kershaw, sitting over it. Did I sober my opinions? Not a bit. The O.K. will crack, I thought. It did—but only by the miracle of *a stainless steel inlet valve* (of all incredibilities) snapping across the stem. The two Levises will melt their pistons or burst their magnetos by revving the armatures too fast and too long. Kershaw will ride on pawkily and win. And I noted two more J.A.P. engines lying off fifth and sixth waiting for things to happen. Also I remarked that in the comparatively slow Baby Race machines count for more than men, as a mere tyro can lap at 44-46 minutes. So I lit a pipe and waited for the field to reappear in lap 2.

I. M. Sheard being escorted back after winning the Junior Tourist Trophy

### After lap two.

No Handley. Ah, a fluke, of course. Davison at the head. If a two-stroke can stand two laps, need five puzzle it? Kershaw's New Imperial—the alleged 9,000 r.p.m. type—24s. slower than its first lap, and the Levis only 5s. slower. If Kershaw holds a watching brief, there was too much "watch" and not enough "brief." Pike's Levis had vanished, it was true. But only a fire: and any machine may catch fire, of course. Whalley accelerating, as I expected. But a Velocette coming up, though slower than the Levis:

# WHERE COMPLETE CONTROL IS ESSENTIAL.



(Top.) Some idea of the extent of H. Chambers's (A.J.S.) leap at Ballig Bridge is indicated by his "floating" shadow.
(Bottom.) His machine leaning at a seemingly alarming angle, P. Newman (Ivy) cornering in Ramsey.

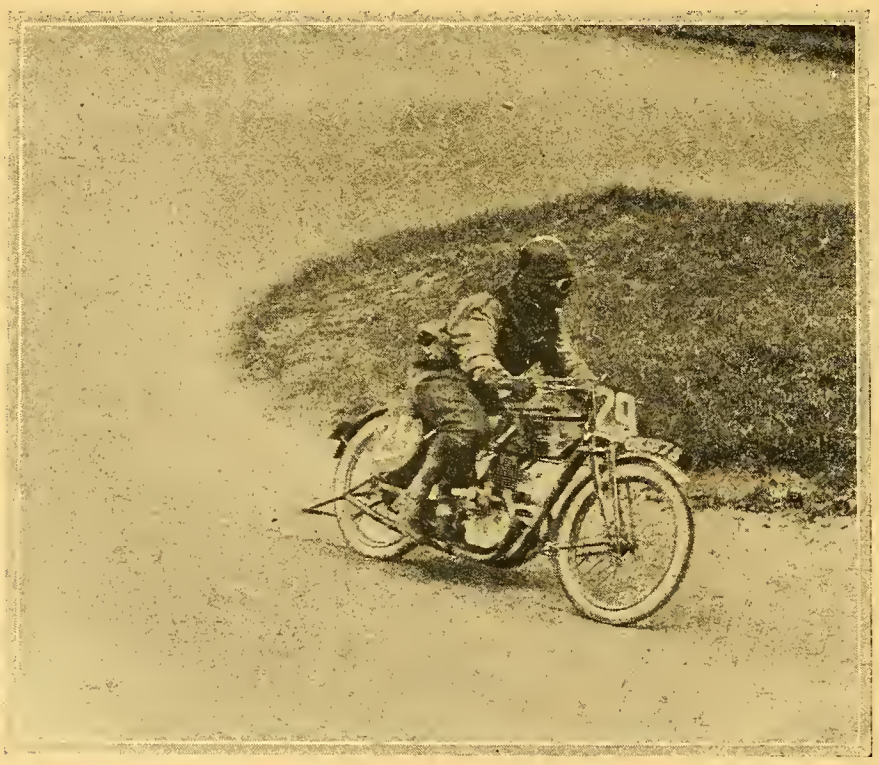
**Lightweight and Junior Impressions.** — and I chanced to know what a pushful kick the latest Velocettes have. I began to wonder whether a novelty in *hors d'œuvres* was being dished up.

Lap 3 saw the Levis with a nice, fat little lead of 2m. 33s., and its sweet little engine roaring away with as clear a *timbre* as ever. Eight minutes faster than the Velocette over 112 odd miles. I conceived a profound respect for the Levis. And whatever was Kershaw doing? The Levis was leaving him at the rate of rather over one minute per lap : and there are no flies on Kershaw as a rider : or on the New Imperial crowd as an organisation. Hereabouts is the crux, I thought. If Kershaw does not open his throttle here and now, and come through with a wet sail, the Levis has got him beat, and need only stand up to win.

Lightweight competitors undergoing the trying preliminaries to the start of their race. D. Prentice (New Imperial), last year's winner, has just moved into the starting position

I considered the lap speeds. Davison up to this point had averaged nearly 51 m.p.h. In 1921 Prentice's New Imperial had won at less than 45 m.p.h. An advance of 6 m.p.h. in twelve months! I took off my hat to Davison and the Levis, and focussed my glasses on the nasty, illegible little progress disc above Nos. 11 (Davison) and 15 (Kershaw) on the gaunt hoarding opposite me. The finger of the New Imperial disc abode stationary—he was not lying doggo, but down and out in a whole-hearted effort to overhaul a faster machine. But Davison's index crept steadily on. Lap 4 saw him leading by over 10 minutes. Lap 5 saw him win by over 13 minutes.

Then his marvellous little engine was dismantled by the jaundiced cynics of the A.C.U. management who naturally suspected it of being Temple's Brooklands Harley. Its bore was a mere 62 m.m. The stroke a beggarly 82.5 m.m. Two forty-eight c.c. No more. The piston head was innocent of carbon—scavenged by the turbulent blast of a potent exhaust and an eager intake. The cylinder head was clean enough to please a Dutch housewife. Just a trace of soot on the ports — no more. And the bearings all tight. *Some* two-stroke. How nice to see such an assorted crowd backing up —Rex, Velocette, Sheffield-Henderson, New Imperial, O.K. No haughty monopoly here. The *hors d'œuvre* had certainly given one much to retract, much to think about.



Well round the Ramsey hairpin. R. U. Judd (Velocette) is probably thinking how much faster he might be going on the Brooklands banking.

And so to the *entrée*.

The T.T. *entrée* is based on the other dining principle mentioned at the start of these notes. You greedily meditate, select your favourite dish, smack your lips, and wait rather impatiently while the waiter is setting the forks precisely parallel and flicking away imaginary crumbs from the cloth. *My* favourite *entrée* is made of minced kidney and mushrooms. When I was twenty-one I once

**Lightweight and Junior Impressions.—**

had a little money for about six weeks. I ordered kidney and mushrooms every day. I grew rather tired of it then. The A.J.S. is a very nice bike. I have one. I like nothing better. It won the Junior in 1914. And again in 1920. And once more in 1921. It displayed every intention of scoring again in 1922. It is developing an invincible habit. So I felt towards the Junior as I felt towards kidneys and mushrooms in the fifth week of the temporary opulence described above.

### Lap one of the Junior.

Howard Davies starts first of the 350 c.c. class and streaks round in 40m. 11s. from a standing start. Very nice, too. But somehow I have tasted kidney and mushrooms before. What's that? Le Vack, starting 9m. later, has lapped in 40m. 7s.? Weird yells from all around. No hostility to the A.J.S. Still less, anything depreciatory, to that pocket marvel, H.R.D. Just a moist glistening of the eye at the aroma of a new and very savoury *entrée*. Harris is round in 40m. 10s.? More kidney and mushrooms in fact. The Cotton in 40m. 50s. What *is* a Cotton, anyway? Then two more A.J.S.'s, and the whole six inside 52s. of each other. Praise be to Allah for a gorgeous race anyhow, with at least two chances of a surprise. We did not take the Cotton seriously enough, I admit. (Woods, in my opinion, would have won outright if he had not caught fire. His machine was a very lame duck indeed after that unlucky second lap flare-up at which moment it was over half a minute ahead of Sheard. Under the terrific handicap of a split oil tank, the loss of its main brake, the waste of a full minute, and the shock to Wood's nerves, it finished less than 14m. behind Sheard. (*Watch Woods in 1923!*).

### David against Goliath.

But Le Vack thus early stirred all our pulses. His engine was only designed eight weeks ago. It was what card players call a Singleton—No. 2 hasn't been made yet. He was up against the formidable A.J.S. battalion. He was David against Goliath. Belgium confronting Germany, Jimmy Wilde challenging Dempsey. And a clever, likeable fellow, too. The crowd rose at him just as they had done with Whalley in the previous year.

Here was no such camouflaged certainty as the Baby Race had given us. It was a pack of sleuth hounds straining to pull down a solitary thoroughbred. We waited breathlessly for the end of lap 2: and the worst of it was that with Davies starting at 10h. 16m. 30s. a.m., Le Vack at 10h. 25m. 30s. a.m., and Harris (A.J.S.) at 10.29 a.m., we had to puzzle our heads with dreadful calculations before the painters brushed the all-important times up and ended our suspense.

At last the vital lap 2 figures were complete. Stringing out a little—it took 1m. 40s. to cover the first six now. Still four A.J.S. machines among them. The lonely Le Vack had pulled out his 3s. lead to 10s. Woods round in 40m. 29s. (Ugh! And that horrible flare-up fifty yards along lap 3!) Another long wait whilst we watched the fingers creep round the B(Ballacraine), S(Sulby), R(Ramsey), B(Bungalow), and C(Creg-na-baa) of the dials. Noted meanwhile that Harris, the popular Island tip for the winner, had impertinently stolen a 17s. lead of Howard Davies. There came to mind, too, the rumour that Davies is too good a rider for a 350 c.c. engine over the Manx course. He can flog it harder than any 350 c.c. can reasonably stand. If Harris is even more ferocious—why, who can catch Le Vack? There appeared to be no answer.

What's the megaphone saying? "No. 33 (Davies) retired at Crosby with engine trouble!" Well, he will insist on winning the Senior now following last year's precedent. Look at Harris's dial—he's had a stop at the back of the Island somewhere. So lap 3 saw Le Vack leading by nearly two whole golden minutes. Good-bye, kidneys and mushrooms. But, bless me, here's Sheard catching up hand over fist: and Grinton, on yet another A.J.S.—is there no end to these fellows? And that plucky Cotton still in the first six after a blaze and losing so much time. Well, well!

### Consolation.

Lap 4. Sheer tragedy from the *menu* standpoint. The new dish—truffles in aspic, let us say—brandished under the nose: its appetising scent inhaled for a moment: then a grimy paw substitutes the old familiar kidneys and mushrooms. But certain consolations. If the plucky Le Vack is padding home afoot leaving his solid gear box by the roadside, here is a Manxman leading in the great Manx race. Salaams to him and to the Island which bred him, and greets us so warmly every year. And, after all, if the A.J.S. has cornered the Junior for four successive races, honour to whom honour is due.

Could any other team drop cracks like Davies and Harris and Longman and Kelly and still canter home first and second, beating the field by 10m. and 20m. respectively? The hollow character of the A.J.S. supremacy is the most convincing proof of quality which motor racing has yet afforded. At the particular combination of speed and stamina which road racing demands in a victorious team, they are transcendently invincible at present, as they have now been for eight years in the 350 c.c. class. They will not be displaced from their unique pre-eminence until a first-class metallurgist, a first-class engineer, and six first-class road racing jockeys take them on. And perhaps not then.

### Next Year?

The Sheffield-Hendersons, however, made a remarkably fine show for a first attempt, and, with J. Thomas third in the Junior, and L. Padley fourth in the Lightweight event, they are certainly amongst the makes which will be watched next year. No firm nowadays wins a T.T. on its first year of entry; generally it takes three years of hard trying, but the Sheffield production allied with the o.h.v. Blackburne may well reduce the waiting period to a little over twelve months.

B. H. DAVIS.

# The International Senior Tourist Trophy Race

The winner, A. Bennett (Sunbeam) crossing the line at the end of his history-making ride.

**A. Bennett wins the Senior T.T. on a Side Valve Sunbeam in the Record Time of 3h. 53m. 0·2s. = 58·33 m.p.h. Average Lap Time beats all previous fastest Lap Times. W. W. Brandish (o.h.v. Triumph) Second, 4h. 0m. 22·6s. = 56·52 m.p.h. H. Langman (Scott), Third, 4h. 2m 14·8s. = 56·09 m.p.h. Thursday's Wonderful Race.**

THE 1922 Senior T.T. was run in gorgeous weather and resulted in a superb victory for A. Bennett (Sunbeam), who led throughout, and won in 3h. 53m. 0.2s. at the astounding speed of 58.33 m.p.h., his second lap being just one second slower than 60 m.p.h., a feat which all riders who know the Manx course will appreciate.

The second man was W. W. Brandish (o.h.v. Triumph), who finished in 4h. 0m. 22.6s.; he had been running third and fourth during the earlier laps, and finished with his engine in perfect condition.

H. Langman and C. P. Wood, both on Scott Squirrels, were third and fourth respectively. Several famous riders were unlucky. George Dance retired with a buckled wheel in the first lap, and F. G. Edmond broke his handle-bar at Ballig on the second circuit, when he was lying fourth. The cruellest luck befel F. W. Dixon, who retired with tyre trouble at Ramsey on the final round, when he was riding second some three minutes behind the winner. Grahame Walker (Norton) was fifth. A complete list of finishers will be found on p. 773.

In spite of the high speeds, there was a notable absence of accidents. The winning machine was entirely British, down to the smallest item of its equipment.

Thursday dawned with a blistering sun, and even in the small hours there was no mist on the mountain. The Highway Board did its best with water-carts, covering most of the course, but dust threatened to bother the competitors, and the heat was evidently going to be oppressive for the spectators. Every boat arriving since Wednesday morning had been packed, and long before 9 a.m. crowds were streaming out to the various points of vantage along the course. The narrow hill leading up from the promenade at Douglas to the grandstands was full of every imaginable kind of vehicle, crowded to excess on the ascent, or returning empty for a fresh cargo; and the air was full of dust and exhaust fumes.

The phenomenal speeds recorded in practice had considerably intensified the excitement which is the usual prelude of a Senior Race—the tensest excitement of the whole motor cycling year; and on Thursday a special anxiety was discernible, since the 500 c.c. machines are now capable of speeds which sound absolutely perilous over such a course, so that the dread of serious accidents was present to many minds.

At 9.50 a.m. the National Anthem notified the arrival of the Governor, and

R. T. Cawthorne at Quarter Bridge; he rode one of the experimental overhead valve Nortons.

imultaneously the riders wheeled their iachines down the road, in ranks of iilitary precision. Right in front of the imekeeper's box was a small oblong, iarked in white on the tarmac, from hich each rider started in turn. Its rst occupant, by right of last year's ictory, was Howard Davies, a workman-ke figure in tight brown leather, dis-aining gauds. But the 66 men behind im resembled a flower garden in their arish racing colours—Indian red, Scott iolet, Norton grey, Douglas blue and ilver, Sunbeam black and gold, with he vivid grass-green helmets, jackets, ud breeches of the Rudge men standing ut above all.

Among the Tritons were five plucky innows—the three A.J.S. 350 c.c. iachines of Davies, Wade, and Keily, .e Vack's J.A.P.-engined New Imperial, nd Whalley's Massey-Arran. The only vins were five Scotts, five Douglases, one ew Gerrard, and one N.U.T.

Two minor changes were made in the rrangements at headquarters, both in-pired by Tuesday's experience: riders ere ordered to stop their engines during epôt stops to reduce the risk of another re, and an extra board was erected to xhibit the numbers of the ten leading ien as each lap was finished.

### The Start.

Davies evidently realised that contend-ig against 500 c.c. engines was a sterner isk for his A.J.S. than in 1921, for he ad streamlined his front number disc ith celluloid. He got a great cheer. So id de la Hay, No. 2, as the 1920 winner, id No. 3—Duggie Brown—as a native f the island. C. P. Wood's arrival on ie starting oblong stirred sympathy, as ie rule against preliminary warming-up f engines was deemed unfair to the ater-cooled two-strokes; but Wood ushed off, and his engine was firing from one-cold within ten yards.

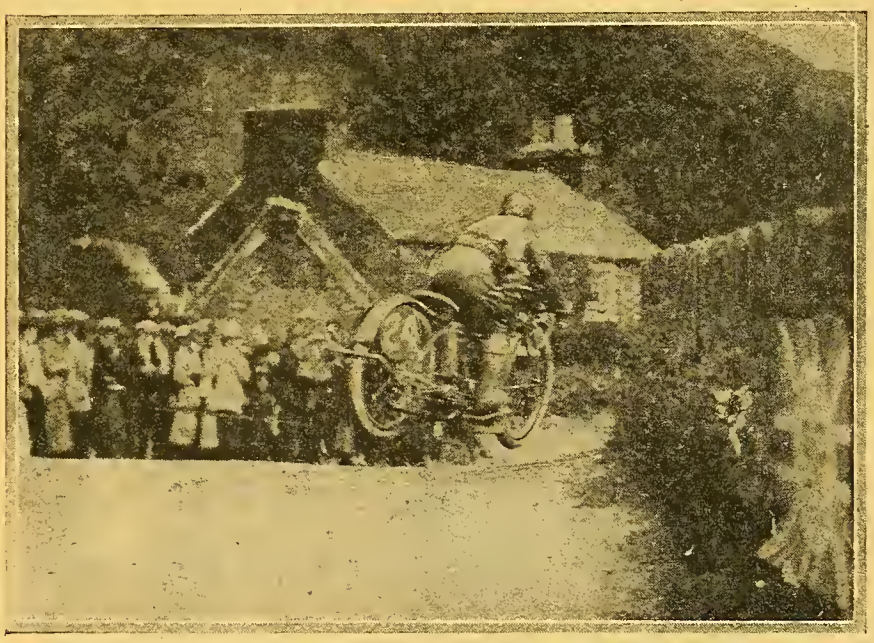
A. H. Alexander, who had elected to de his 1920 Grand Prix machine in lieu f the 1922 model, which he had tested i the recent Scottish Six Days, made the est get-away up to this point; but some riders obviously preferred to spare a cold engine at the outset. Greenwood's Sunbeam smoked as if his pump had been leaking overnight. F. W. Dixon, whose dashing practice work had earned him many backers, had a great send-off, and probably carried more money than any other entrant.

### Methods of Mounting.

Quite half the riders stepped on to the near footrest when their engines fired, and the old-fashioned leap clean into the saddle—once regarded as essential in speedy events—was used by few. Le Vack got an ovation in recognition of Tuesday's great ride, and so did Davison, as the lightweight winner.

Simpson, regarded in knowledgeable quarters as the Scott dark horse, tried to start with no gear engaged. By the time he got away twenty men were signalled through Ballacraine; only No. 13 was missing at that point. Davies still led at Sulby, where Clarence Wood had already caught Duggie Brown and Brandish. Meanwhile about half the field had got away. Vivian Olsson says he competes because the island is the only place where one can have a real blind; but he got away like a winner.

Searle's Sheffield-Henderson showed terrific acceleration. Bennett, probably co-favourite with Dixon, went off slowly, adjusting his goggles after mounting. The board showed that Hassall's Norton was already gobbling up men who had started ahead of him, and Clapham's progress dial was equally promising. One felt that the race had really started.



Few pictures give a better impression of the leap made at Ballig Bridge by fast machines than this wonderful photograph of F. W. Dixon with both wheels of his Indian well off the ground.

G. Clapham (486 c.c. Scott) opening out into the fast section below Craig-ny-baa.

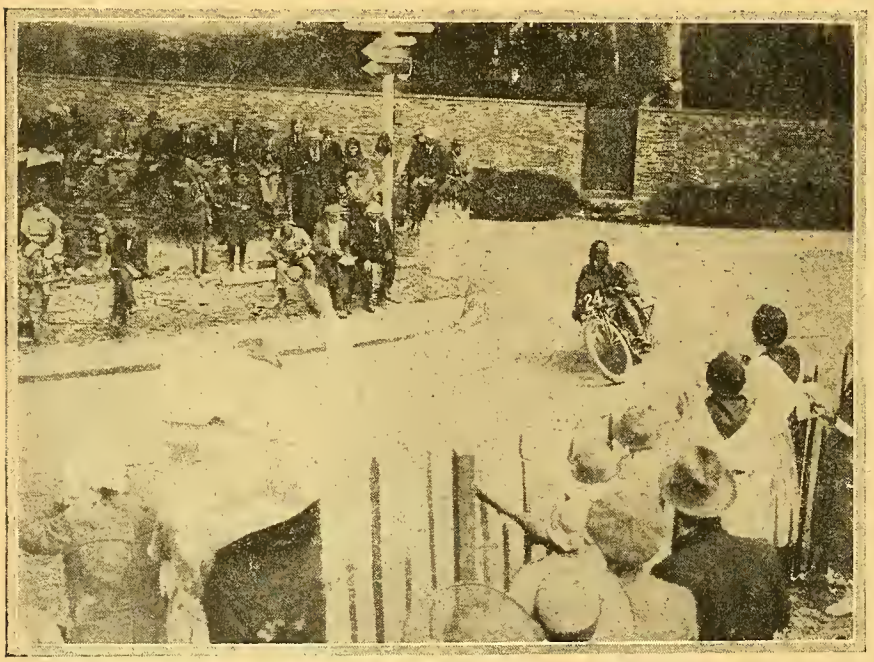
A buzz of comment arose when de la Hay was posted as first man at Ramsey, but Davies' number was substituted a minute afterwards. "Pa" Cowley got a special cheer as the oldest starter in the Senior: he has a beard and his years coincide with his racing number, *i.e.*, 57; his son was also riding.

Three of the most dangerous entrants were among the last half-dozen to leave—Dance (cheered before he took his stance in the oblong), F. G. Edmond (whose Triumph had been kept under lock and key), and Langman (riding one of the speediest Scotts). The last man left at 10h. 33m. 50s.; so if the rumoured 37-minute laps were to be produced, there would only be the briefest interval before the early starters completed their first circuit.

### The First Lap.

This interval brought news of a catastrophe. The discs showed that de la Hay had caught H. R. Davies on the mountain, and after the latter's index had been stationary for a long time it transpired that his petrol pipe had broken without the rider's knowledge, and near the Bungalow drained his tank.

Bownass (N.U.T.) was reported repairing after a tumble at Quarter Bridge.



Around the course Dixon, the Indian exponent, was a hot favourite, and he was popular with the children especially, who cheered him at Governor's Bridge and other points on the route.

Then Brandish's (Triumph) disc went u signifying arrival at Governor's Bridg necks were craned, and almost instant neously the distant hum of his engi struck the ear. Nearer and nearer came at 70 m.p.h. in giant *crescend* The crowd drew a breath of appreci tion, and perhaps 20s. later de la Hay Sunbeam, which had lost its minute's sta of Brandish, ripped past, followed i quick succession by many others.

### The Bend at Bray Hill.

Nearly everybody cut out momentaril on sighting the curve to Bray Hill, an having thus slowed down took the ben with their engines running. Brandis had done a standing start lap in 39m. 38s —good earnest of the nineteen separat beatings which the 1921 record was t sustain. Meanwhile the board showe that Dixon had caught seven men befor the Bungalow; that Edmond had caugh George Dance; that Bennett was cuttin out a truly frightful pace; and, finally that Dance had stopped. No. 44 (Ben nett) was signalled at Governor's Bridg immediately after No. 34, Cawthorn (o.h.v. Norton), who is himself no slug gard; and a sigh of astonishment went round when the Sunbeam's standing start lap was announced as 38m. 14s.

The crowd was much interested in the Scotts: the musical drone of their exhausts is pleasant to hear, and varies in pitch as the rear wheel spins over a bump. Everybody was curious to know how the later starters had done, especially the three cracks whose numbers were among the sixties. Alas! George Dance was reported as down and out near Craig-ny-baa with few spokes left in his back wheel. But Edmond came through very early, though with goggles down, suggesting trouble next time he entered another man's dust. Scarcely had he passed before Langman's Scott streaked through, gradually overhauling their starting difference. Porter (New Gerrard) visited his depot. Norris came through very late, as did Bownass, whose pluck in continuing after a bad toss was duly recognised. At last the position at the end of lap 1 was clear:

### Positions after the First Lap.

| | | H. | M. | S. |
|---|---|---|---|---|
| 1. | °A. Bennett (Sunbeam) ... | | 38 | 14 |
| 2. | °H. Langman (Scott-Squirrel) ... | | 38 | 15 |
| 3. | °W. W. Brandish (Triumph) ... | | 39 | 38 |
| 4. | °F. G. Edmond (Triumph) ... | | 40 | 7 |
| 5. | A. H. Alexander (Douglas) ... | | 40 | 12 |
| 6. | F. W. Dixon (Indian) ... ... | | 40 | 14 |
| 7. | G. Clapham (Scott-Squirrel) ... | | 40 | 26 |
| 8. | H. W. Hassall (Norton) ... ... | | 40 | 28 |
| 9. | W. Hollowell (Norton) / S. A. Crabtree (Sunbeam) ... | | 40 | 34 |
| 11. | R. T. Cawthorne (o.h.v. Norton) | | 40 | 37 |
| 12. | H. Le Vack (New Imperial-Jap) ... | | 40 | 47 |

°NOTE.—The first four men with a standing start all beat Edmond's 1921 record of 40m. 8s. for a flying lap. These placings included a surprise or two. Brandish had exceeded his practice form; Hollowell and Crabtree had done remarkably well; and no praise is too high for the fashion in which Le Vack's 350 c.c. J.A.P.-engined New Imperial outstripped over fifty bigger engines.

In the early stages with over sixty men still running, the small progress dials were not so useful as they became later on, when the keenest interests had narrowed down to comparatively few men, and many starters had dropped out or lost all chance of victory. But with a dozen

**International Senior T.T. Race.—**

leaders practically within two minutes of each other, the crowd spent the interval in studying the dials, and the attendants at the cages fidgetted over their preparations as the bulk of the men were due to stop for fuel and oil after two laps.

The ranks were beginning to thin, though lap 1 had retained a record percentage of survivors. During lap 2 Reg. Brown was put out near Sulby with engine trouble. G. Cowley, jun., withdrew after his machine had caught fire on the first round. Poor Bownass stopped at Sulby with a broken steering column, due no doubt to his crash on lap 1.

News came through that Simpson's disappearance was due to his petrol tank bursting at Ramsey in the opening circuit. The Duzmo never regained the starting point. Ivor Thomas had engine trouble at Bishop's Court on his second round, and a similar fate overtook Hatton's Douglas at Ramsey. A. W. Jones (Douglas) survived lap 1 to vanish on the next lap. (We heard later that his tyre came off in a crash following a frightful wobble after Governor's Bridge.) Stead's failure to return was reported as due to tyres, and Ollerhead's Douglas gave up at Union Mills in the second round.

### A 350 c.c. Machine Gaining Ground.

These misfortunes left less of the board to be studied. Le Vack was gaining more ground than anybody, despite his small engine. Consternation was rife when Edmond's dial seemed to indicate a stoppage, and a groan went up when the megaphone announced that a broken handle-bar had put him out of the race near Union Mills. He felt it giving way, and was therefore able to avoid a fall.

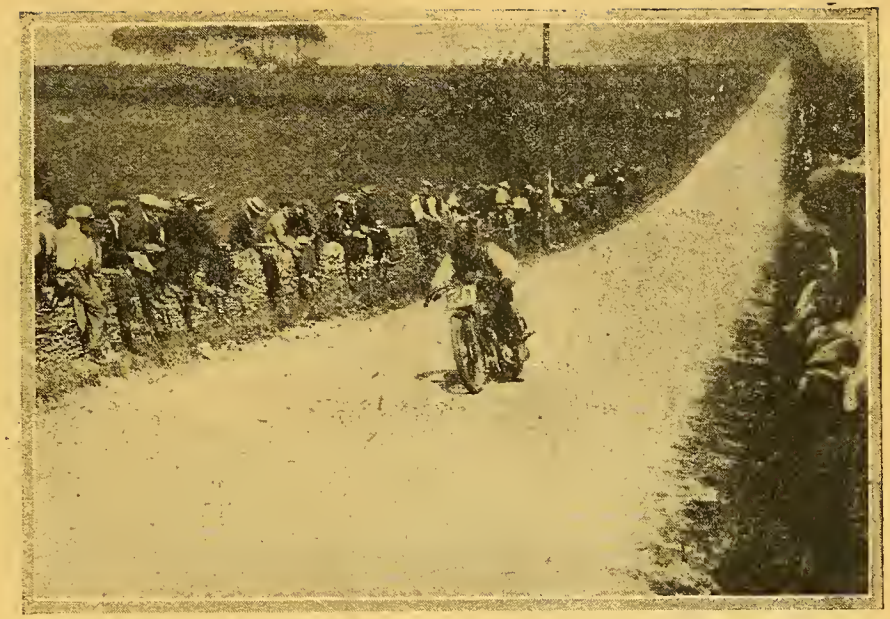
Wood's Scott appeared to be pressing Brandish, now the chief hope of the Triumph team; indeed, the Scott was clearly travelling at a furious pace. A. H. Alexander met some brief trouble, but Hollowell's Norton was accelerating.

Scarcely had these features been recognised before the yellow discs began to herald the second lap arrivals, and neat deceleration at the depots was the order of the day, very few men wobbling or overshooting their cages, whilst the brakes were quiet, firm, and smooth as contrasted with the squeaks and skids of previous years. In fact, observers opined that improved brakes shared the credit for the faster lap times.

### Advantage of Large Tanks.

On the second lap practically everybody stopped to replenish at the cages, but Wood (Scott) and Hassall (Norton) shot through, having fitted large tanks so as to accomplish six laps on a single depot stop, thus saving at least fifteen seconds on any rival who stopped every other lap.

Brandish, having started No. 4, was first man into the cages, but quick as he was, Wood hummed past ere he could get away: the Scott was travelling like forked lightning at this point, but Wood presently found it wise to restrict himself to threequarters throttle in the interests of his ignition. Ere he did so, he cut the Bennett's new lap record (38m. 14s.) by nine seconds, but, as it turned out, the Scott was not to hold the record for many minutes.



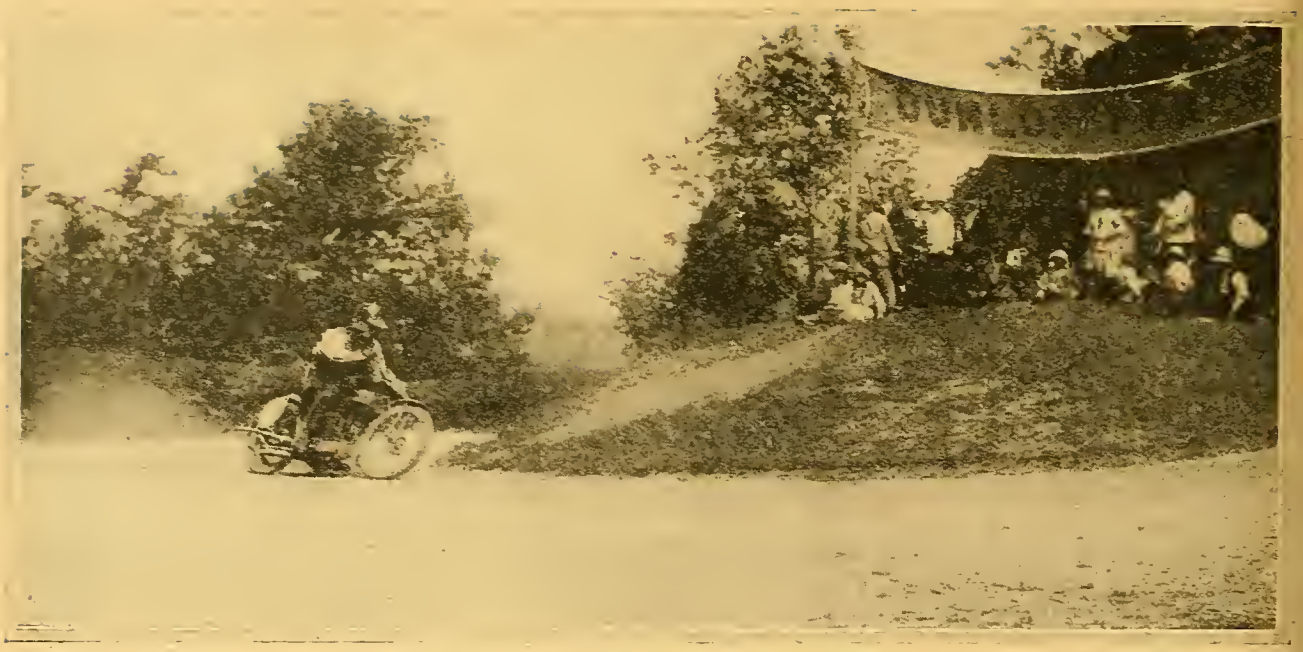
One of the fastest sections of the course—from Craig-ny-haa to Hillberry. H. R. Harveyson (499 c.c. Triumph) approaching the latter corner.

As we waited to see how the later men were faring, the megaphone reported that Jackson (Sunbeam) had gone over his handle-bars at Ballig Bridge, but was quite unhurt. The "crash" helmets have now many lives to their credit, and do not tear off the men's ears, as the croakers had prophesied.

A record lap was expected from F. W. Dixon: 39m. 18s. was certainly hot, but not hot enough to push him right in front. Then Whalley passed still on his first lap—trouble dogs this fine rider; and Mather's (Rudge) was in a similar predicament. All eyes were glued to Bennett's column on the big board, and his yellow disc swung down before his most sanguine friends expected it. He shot up to his cage, and was off again in a matter of seconds, while the crowd guessed at his lap time.

At last the man with the paint brush approached column No. 44 on the board —"37m. 46s." Phew! For is not

H. W. Hassall (490 c.c. Norton) overtaking G. Cowley Senr. (499 c.c. Sunbeam) on the Governor's Bridge hairpin.



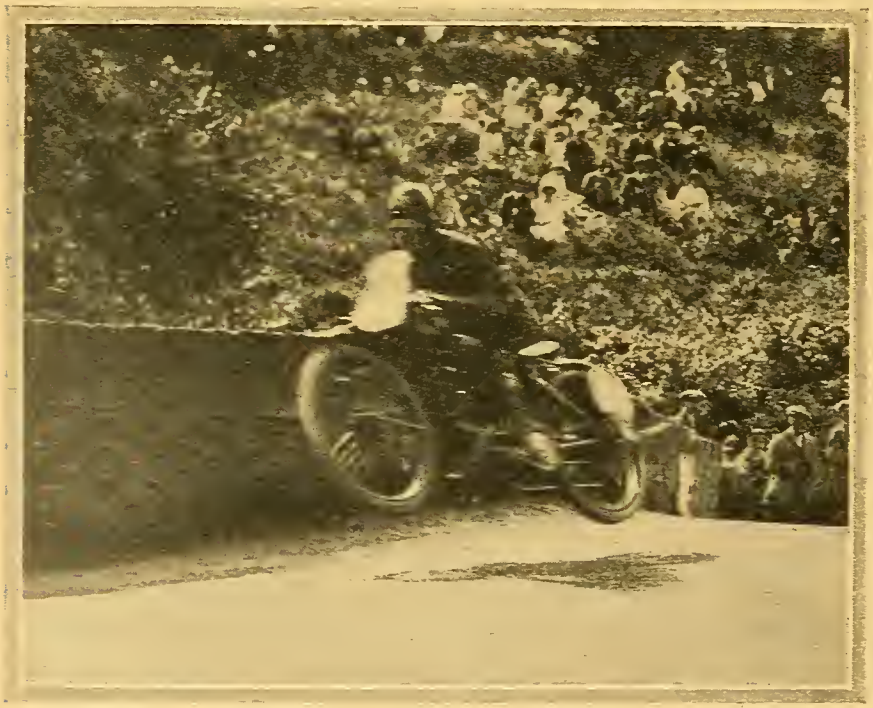
Beautiful cornering was a feature of last week's races. F. B. Halford (499 c.c. Triumph) making a neat attack on Ramsey hairpin.

37m. 45s. a level sixty miles an hour? Yet Bennett's Sunbeam engine is so quiet and smooth that few would suppose him to be fastest past the stands.

### Speculation.

Could any of the late starters among the sixties beat this? Slowly their pointers crept round the dials. Suddenly a cheer arose up the road—surely it *couldn't* be Langman so absurdly soon? "He's done a thirty-five-minute lap!" proclaimed some Scott enthusiast. But no! It was Howard Davies, sadly touring in after obtaining a supply of petrol.

Two of the formidable "sixties" in Dance and Edmond were now out of the race, but Langman fought hard for his end of the list, and when he ran into his depot, his lap time was 39m. 10s.



The riding of F. W. Dixon (498·8 c.c. *Indian*) is extraordinarily daring, and he "jumped" bridges like those at *Ballig* and *Ballaugh* in the manner shown.

### 2nd Lap Positions.

The leaders after two laps were then posted as follows:

| | | H. | M. | S. |
|---|---|---|---|---|
| 1. | A. Bennett (Sunbeam) | 1 | 16 | 0 |
| 2. | H. Langman (Scott-Squirrel) | 1 | 18 | 25 |
| 3. | C. P. Wood (Scott-Squirrel) | 1 | 19 | 8 |
| 4. | W. W. Brandish (Triumph) | 1 | 19 | 13 |
| 5. | F. W. Dixon (Indian) | 1 | 19 | 32 |
| 6. | W. Hollowell (Norton) | 1 | 20 | 52 |
| 7. | H. Le Vack (New Imperial-Jap) | 1 | 21 | 11 |
| 8. | G. Chapman (Scott-Squirrel) | 1 | 21 | 13 |
| 9. | H. W. Hassall (Norton) | 1 | 21 | 16 |
| 10. | R. T. Cawthorn (o.h.v. Norton) | 1 | 21 | 53 |
| 11. | S. A. Crabtree (Sunbeam) | 1 | 22 | 11 |
| 12. | T. C. de la Hay (Sunbeam) | 1 | 22 | 53 |

NOTE.—The outstanding feature of this time-sheet is the quality of Bennett and his Sunbeam: his opening laps in 38m. 14s. and 37m. 46s. had given him nearly 2½m. lead of the field in a most furious race. C. P. Wood actually jumped his Squirrel from thirteenth to third position in one frenzied circuit. Of the first lap leaders, Edmond had retired, A. H. Alexander had dropped back, de la Hay was working in towards the van, and the astounding 350 c.c. New Imperial had gone up five more places, actually outstripping all but six of the Senior machines.

Already victory seemed assured for Bennett, provided he and his mount could stick six laps of such a cracking pace under an almost tropical sun. The prophets began to quarrel—all the hares would stop by the wayside, and one of the tortoises would quietly annex a pawky victory. For our anxiety and excitement there was no vent but to use glasses and watch in conjunction with the progress dials: and when a Boy Scout was late in shifting a fast man's pointer round the dial, the hearts of that rider's supporters almost stopped beating with anxiety.

Meanwhile G. Cowley, jnn., toured in on his fire-blackened mount and retired at the grandstand. Norton enthusiasts grew anxious, for Hollowell, their fastest man, was not signalled from Snlby when one there. Langman's Scott signals

**International Senior T.T. Race.—**

wanted just enough waiting for to suggest he had sustained a brief stop somewhere—a touring trifle which is converted into disaster when your rivals are lapping at nearly 50 m.p.h. Hassall's counter always seemed to move a few seconds early during this third lap, suggesting that the mantle of Hollowell had fallen on the second Norton. Meanwhile, one felt a pang of pity for the general rush of the riders, many of whom were lapping at speeds which would have sounded dazzling enough in any previous T.T., but were almost overlooked in the keen combat between the super engines of the super men.

### Unrecognised Merit.

Amongst the middle markers excellent work was clearly being recorded by all men who covered two laps in under ninety minutes, i.e., at better than 50 m.p.h. There were some two dozen of them, whose names do not appear amongst the leaders—two Sheffield-Hendersons (Strange and Searle), eight Nortons (D. Brown, Tucker, G. Black, Minister, Carron, N. Black, Shaw, and Adamson), three Sunbeams (Greenwood, Waterhouse, and Olsson), two 350 c.c. A.J.S. (Wade and Kelly), two Rudges (Baldwin and Taylor), two Douglases (A. H. Alexander and Anstice), two Indians (D. Alexander and Davidson), and two Triumphs (Harveyson and Halford). These riders' speeds varied from 50-55 m.p.h. over the first two laps, and were good enough to have won or nearly won in 1920 or 1921. But in this year's crop of miracles such feats passed unrecognised by many of those present.

During the brief wait for the return of the leaders on their third lap, rumours began to fly about—that Bennett's tank hardly held enough oil for two laps at his present speed; that Johnson had crashed near Ballacraine and had possibly fractured his leg; that the occasional misfiring of Dixon's engine implied a broken valve spring; and that the Scott speedsters had to choose between sparing their engines a trifle or asking for ignition trouble.

Then the crowd sat up to watch some speed, as very few riders were due to visit their cages on the third lap. Of course, the men were not all out at the stands, as the Bray Hill curve comes soon after; but they were probably doing 70 m.p.h.

### First Replenishment Stops.

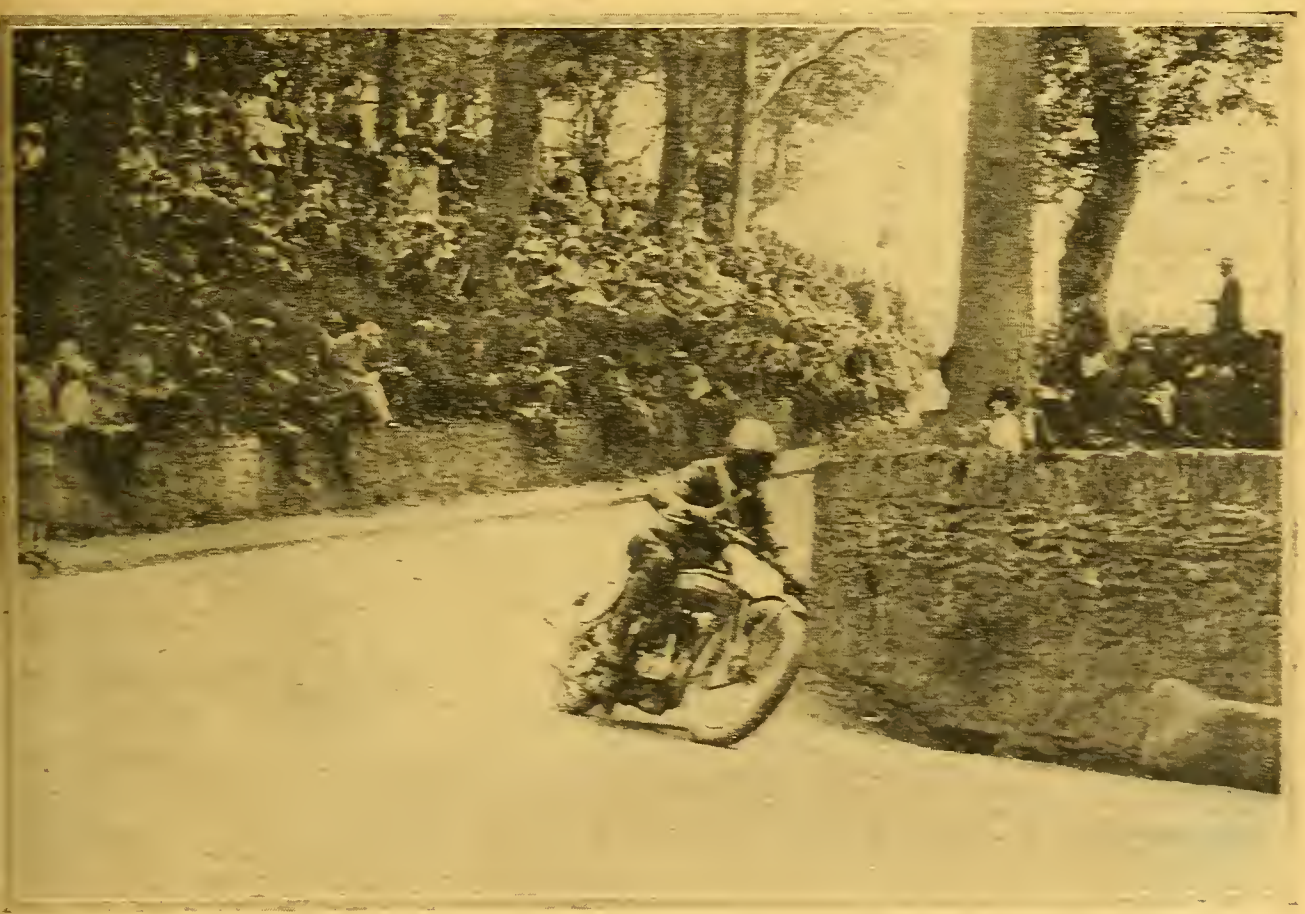
At noon precisely Wood made his first replenishment stop, having covered three laps on one tankful of spirit. His lap of 58m. 10s. was 11s. slower than his previous circuit. Burrill came in on his second lap, overshot his cage, and turned round in the road to ride back to it, fortunately nobody was passing through. Clapham gave a demonstration of a Squirrel at speed, having filled up on the previous round. Dixon came past early, having lapped in 58m. 5s., but there was a shade of irregularity in the roar of his engine fast though he was.

The board signals hinted that Hollowell was hopelessly stuck near Sulby, and his retirement was presently telephoned through—engine trouble: hard lines on the Norton. Brandish had dropped some way behind Wood.

Where was Bennett? Up went his disc punctually, and he shot through quietly in 58m. 20s., which included his stop at the cages at the beginning of the lap.

Munday (New Hudson) arrived late on his second circuit, having run out of petrol up the road. Le Vack roared through in his usual projectile fashion, his New Imperial's performances being indistinguishable by eye from the faster 500 c.c. machines. Douglas Alexander was just behind him, and seemed less speedy.

Late arrivals and withdrawals were giving the board a more sporty appear-



A natural grand stand is provided by the banking at Governor's Bridge. The rider is J. W. Shaw (490 c.c. Norton), one of Ireland's representatives in the races.

**International Senior T.T. Race.—**

ance now that half the distance had been covered, and it was easier to pick out those who threatened danger. Some of the slower men seemed to be tiring physically: at any rate, a number of them were plainly taking the simple bend at Bray Hill with reduced dash, cutting out sooner and longer.

### Half Way Positions.

| | | H. | M. | S. |
|---|---|---|---|---|
| 1. | A. Bennett (Sunbeam) ... ... | 1 | 54 | 20 |
| 2. | C. P. Wood (Scott-Squirrel) ... | 1 | 57 | 24 |
| 3. | F. W. Dixon (Indian) ... ... | 1 | 59 | 9 |
| 4. | W. W. Brandish (Triumph) ... | 1 | 59 | 20 |
| 5. | H. Langman (Scott-Squirrel) ... | 2 | 0 | 29 |
| 6. | H. W. Hassall (Norton) ... ... | 2 | 1 | 51 |
| 7. | G. Clapham (Scott-Squirrel) ... | 2 | 2 | 54 |
| 8. | H. Le Vack (New Imperial-Jap) | 2 | 3 | 18 |
| 9. | R. T. Cawthorne (o.h.v. Norton) | 2 | 5 | 38 |
| 10. | T. C. de la Hay (Sunbeam) ... | 2 | 5 | 44 |
| 11. | N. Black (Norton) ... } S. A. Crabtree (Sunbeam)... } ... | 2 | 5 | 55 |

NOTE.—Bennett had thus added another 39 sec. to his lead. Dixon had caught Brandish and Langman. Wood, now standing second, had picked up 4 sec. only on Bennett. Hassall had gone up from 9th to 6th place, and Norman Black replaced the missing Hollowell.

The usual wait for the late starters' times ensued, but at last Langman's came up, and the half-time positions could be calculated.

### Unable or Unwilling?

Thus the fourth lap was contested in a growing tension. If the riders knew their approximate positions, nobody except Wood seemed inclined to go hard after Bennett; the others seemed to have set themselves a certain pace, and to be unable or unwilling to exceed it.

As it happened, the first information obtainable from the progress dials proved that something was amiss with Wood. The pointers were not always reliable, but they indicated that Brandish had caught Wood and even reached Craig-ny-baa before the Scott got moving again, and was telephoned as past the Bungalow. "Nothing serious, but a short stop and a slow lap!" said everybody. Meanwhile Dixon's pointer spurted on regularly, marking a new sector every few minutes, and so did Bennett's. Langman, on the other hand, seemed to be getting his pointer round faster again.

### Retirements.

Occasional news dribbled in of the slower men and the missing ones. Harveyson had been delayed with a stuck valve at Crosby on lap 3, and finally retired. Davison's back tyre had deflated twice. Greenwood walked in after engine trouble at Ballacraine on his third circuit. Tucker pulled the valve clean out of his front tube at Creg Willey. Simister (Norton) met engine trouble at Sulby. Carton broke a piston near Ballacraine. Burrill burst a tyre down Bray Hill. During the fourth round Shaw (Norton) also dropped out, and Searle's Sheffield-Henderson, after a fine *début*, relinquished the struggle near Crosby, after averaging over 51 m.p.h. to that point.

Soon the big clock indicated that the early starters were due in on lap 4. Up went Brandish's yellow disc. He roared in with his stand down, overshot his cage, and was chocked by the stand when he tried to wheel back. He got away some five minutes before Wood appeared, and got a tremendous cheer. Wood was late in arriving, the fourth circuit having cost him no less than 46m. 38s.—an 8 min. excess which ultimately cost him two places; he went through without stopping and whatever had delayed him was clearly remedied by this point.

### Dixon's Difficulty.

Presently Dixon free-wheeled neatly into his depot, effected a lightning fill-up, and departed at speed, but still troubled by that haunting hiccup in the beat of his engine; it was only just noticeable, but sufficient to ruin his chance of riding down Bennett. The spectators waited feverishly for Bennett, whom many people thought incapable of staying the racket of six laps at his opening speed. But the next cheer was for F mond, who toured quietly in, steering with half a handle-bar.

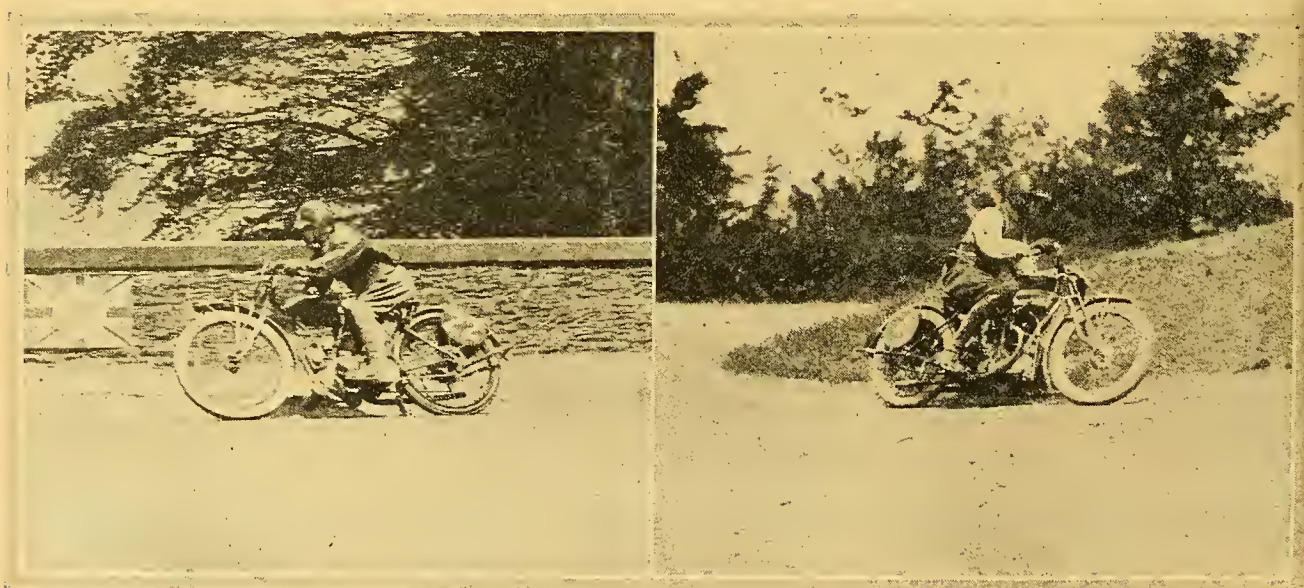
Then somebody with a watch remarked that the pointer on Bennett's dial h stood at "R" (Ramsey) for 15 mi Just when his friends were growing ne vous his pointer suddenly revived, spu round feverishly, gave place to the yell "Governor's Bridge" signal, and in came, having lapped in 42m. 50s. Th was slow time for the Canadian, and later transpired that shortage of oil ha worried him. He spent rather a lon time at his cage, and left amidst friend cheers. Mundey now came in on h third lap, looking rather weary. Most the faster men made depôt halts on th fourth round, which naturally compl cated calculations for the fifth lap. Whe Langman, the latest starter of the fa men, came into the pits, the position the end of four laps was made out a follows :—

### Fourth Lap Positions.

| | | H. | M. | |
|---|---|---|---|---|
| 1. | A. Bennett (Sunbeam) ... ... | 2 | 37 | 1 |
| 2. | F. W. Dixon (Indian) ... ... | 2 | 38 | |
| 3. | W. W. Brandish (Triumph) ... | 2 | 39 | 1 |
| 4. | H. Langman (Scott-Squirrel) ... | 2 | 40 | 2 |
| 5. | H. W. Hassall (Norton) ... ... | 2 | 43 | 2 |
| 6. | C. P. Wood (Scott-Squirrel) ... | 2 | 44 | |
| 7. | G. Clapham (Scott-Squirrel) ... | 2 | 44 | |
| 8. | H. Le Vack (New Imperial) ... | 2 | 46 | 1 |
| 9. | R. Cawthorne (o.h.v. Norton) ... | 2 | 47 | |
| 10. | N. Black (Norton) ... ... | 2 | 47 | |
| 11. | G. Walker (Norton) ... ... | 2 | 47 | 3 |
| 12. | T. C. de la Hay (Sunbeam) ... | 2 | 48 | |

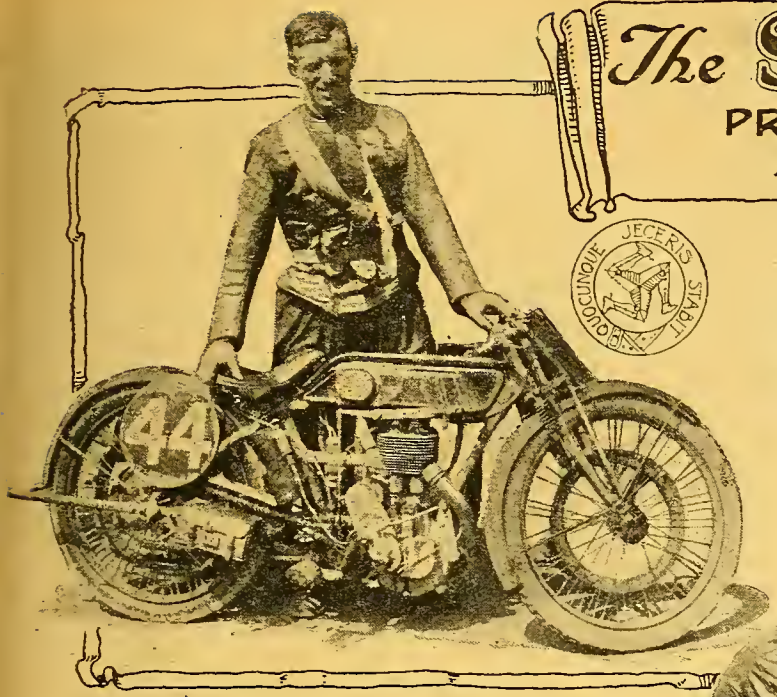
NOTE.—The sensation of these figures was tha Dixon had cut down Bennett's winning lead fro 3h. 4s. to a beggarly 53s. and Bennett's lon depot stop had reduced the Sunbeam vantage b perhaps another half minute.

A tight finish began to look possibl after all. Wood had lost four places, and Grahame Walker had replaced the missing Crabtree. Langman was probably warned at the Scott cage that his chances were now better than Wood's, and the atmosphere became full of electricity.

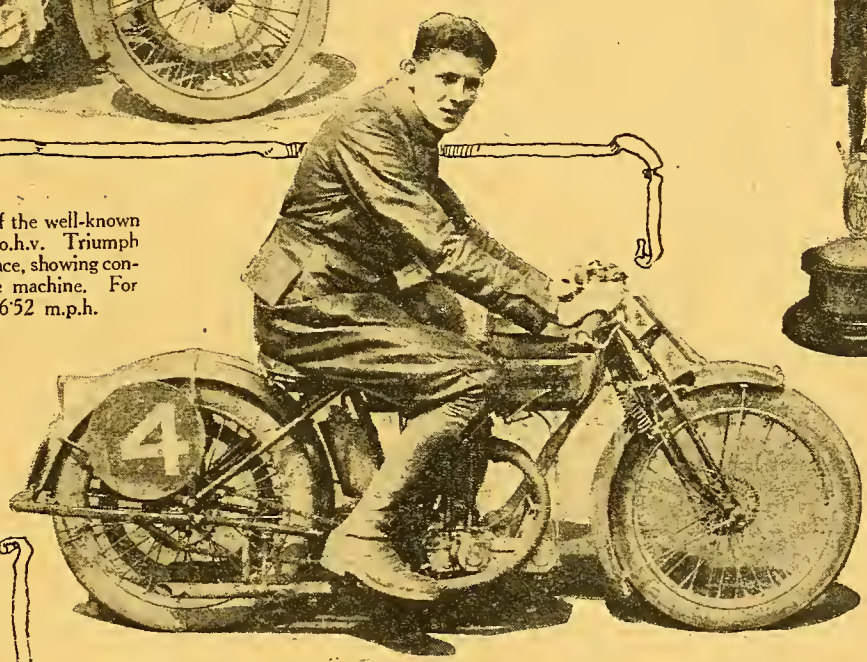


Comparisons in riding attitudes: On the left is D. S. Alexander "getting down to it" at Quarter Bridge, while W. Brandish, second place winner, takes the hairpin cautiously, sitting fairly upright

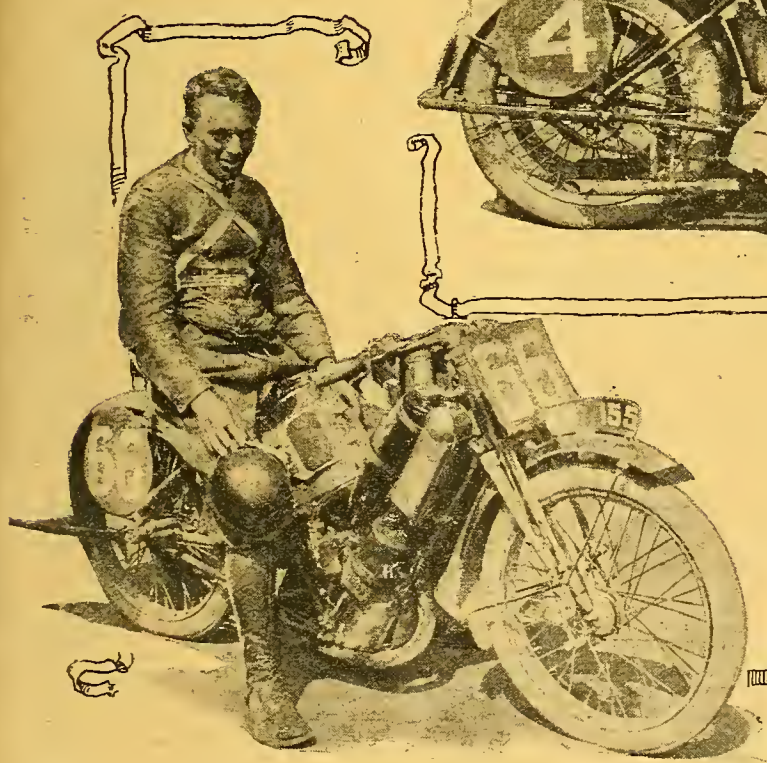
# The SENIOR T.T.
## PRIZE WINNERS in 1922



ALEX. BENNETT, Senior Tourist Trophy winner with the side-by-side valve engined Sunbeam (85 × 88 mm. = 499 c.c.) on which he averaged 58·33 m.p.h. for the 226 miles of the Isle of Man course. Bennett first came into prominence as the winner of the Grand Prix in France last year.



WALTER BRANDISH (Jun.), son of the well-known Coventry Agent. He rode his o.h.v. Triumph (85 × 88 mm. = 499 c.c.) into second place, showing consummate skill in the handling of the machine. For the total distance he averaged 56·52 m.p.h.



HARRY LANGMAN, to whom all credit is due for once again bringing the Scott into a position in "the first three." His mount was a Squirrel model (70 × 63·5 mm. = 482 c.c.) and in the first lap he had a fall which broke away the right footrest completely. Langman's average speed was 56·09 m.p.h.

**International Senior T.T. Race.—**

J. A. Porter (New Gerrard) turned up, having spent some two hours on his second lap, and appeared to leave the course just past the stands. Strange came in to replenish his Sheffield-Henderson, and reported that his average of 46⅕ m.p.h. would have been much higher but for a long stop with tappet trouble. The callous crowd by this time had begun to ignore the men who were merely doing fifty miles an hour, and attention was concentrated on the half-dozen columns which might record the history of a winner.

At last the early starters became due in on lap 5. Brandish was the first of them, and raced past at top speed, his engine running by faultlessly. The next comer was a false alarm, and proved to be Bourke (New Hudson), who walked off the course from the depôts, having encountered trouble in his second circuit.

Immediately after, C. P. Wood took his Squirrel past faster than ever, but too far behind Brandish to cherish any hopes of overtaking him in a non-stop final lap. Scarcely had he passed before F. W. Dixon was signalled in. As the Indian had started 9½ minutes after the Scott, and 10 minutes after the Triumph, an Indian victory was to be expected if misfortune befell Bennett. And Bennett had started 10 minutes behind Dixon, so another feverish delay occurred.

Meanwhile de la Hay came along, but not fast enough to be formidable. The men were looking extraordinarily swarthy, with the combined effects of sunburn and dust and dirt. Then Watson-Bourne arrived, and made a lengthy stop at his pit. Presently somebody remarked: "We should get Bennett's disc up in five minutes, if he is all right!" Hardly had he spoken when "44" was signalled, and the Sunbeam flashed past, travelling magnificently, and apparently faster than anybody had yet taken this stretch. Tired as he must have been, and in spite of an engine which was being rationed for lubricant, he had actually ridden the 5th lap, including a substantial pause at his depot, in 37m. 59sec. As his engine was running perfectly, whereas Dixon's was still missing a trifle, nothing but disaster seemed likely to change the order.

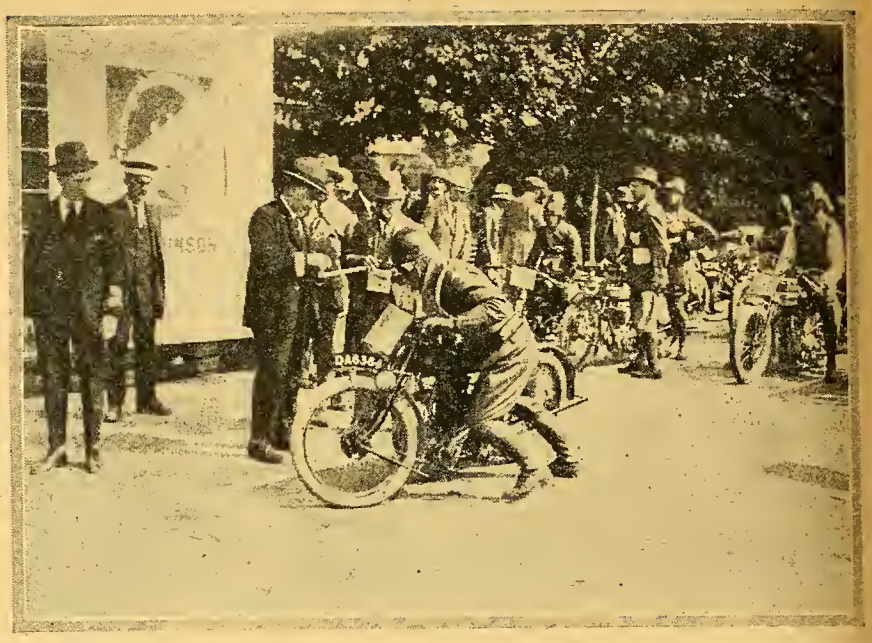
The times for five laps were:

**The Leaders at the End of the Fifth Lap.**

| | | H. | M. | S. |
|---|---|---|---|---|
| 1. | A. Bennett (Sunbeam) ... ... | 3 | 15 | 9 |
| 2. | F. W. Dixon (Indian) ... ... | 3 | 18 | 25 |
| 3. | W. W. Brandish (Triumph) ... | 3 | 20 | 18 |
| 4. | H. Langman (Scott) ... ... | 3 | 21 | 59 |
| 5. | C. P. Wood (Scott) ... ... | 3 | 25 | 25 |
| 6. | G. Walker (Norton) ... ... | 3 | 28 | 44 |
| 7. | R. T. Cawthorne (Norton) ... | 3 | 28 | 52 |
| 8. | T. C. de la Hay (Sunbeam) | 3 | 31 | 35 |
| 9. | H. Le Vack (New Imperial) | | | |
| 10. | A. H. Alexander (Douglas) ... | 3 | 31 | 55 |
| 11. | G. Clapham (Scott) ... ... | 3 | 33 | 5 |
| 12. | V. Olsson (Sunbeam) ... ... | 3 | 34 | 20 |

The first three men seemed firmly established in their places. Hassall's Norton was gone, Wood had lapped in 41m. 23s., Grahame Walker was going up hand over fist. Clapham had evidently met minor troubles, de la Hay was accelerating, and A. H. Alexander made a welcome appearance in the first dozen, much to the credit of his 1920 engine.

Everybody now began to figure out feverishly the times at which the leaders were due to finish if they retained their order. A confusing business at any time, and doubly so after five hours under a blazing sun. But the gods of chance simplified the task for all amateur mathematicians. Incredulously we saw Dixon's pointer become rigid on its dial. It had reached "Sulby." It was due to move to "Ramsey." But it did not. Bennett's pointer moved relentlessly round the clock, but malevolent fortune seemed to have pinned the Indian down. And so it was. A fine engine, still amply willing. A superb rider, as great as Bennett. And the Achilles' heel of motor cycling, a tyre, grudged him even the second place after half a day of danger and effort. The megaphone announced, "No. 24 has retired at Ramsey with tyre trouble!"



Last year's Senior winner, H. R. Davies, on a 349 c.c. A.J.S., starting away in the 1922 Senior Race on a similar mount.

**Bennett *v.* Brandish.**

Then Brandish clocked in amidst frantic cheers. He won the hearts of the crowd on his Rover last year, and the Triumph is popular everywhere. He had started twenty minutes ahead of Bennett. If Bennett came in within that period the Sunbeam was first: otherwise the Triumph. Slowly, inexorably, the minutes ticked away, but Bennett's pointer kept pace with them. Now he was at the Bungalow.

Who's this? Strange's Sheffield-Henderson, "revving" finely in its fifth lap. Bennett's at Craig-ny-baa. Suddenly, up went the yellow "44," and the incomparable Sunbeam roared home, winner of far and away the fastest T.T. on record, more than seven minutes ahead of Brandish, at an average speed of 58.33 m.p.h.

Langman's Scott had started No. 66—eleven minutes later than Bennett, so a brief wait was still necessary before the laurel wreath could be formally hung over the Sunbeam's number on the board.

Langman arrived too late for this, but both he and Wood were cheered to the echo. The former's slowing down was explained by his finish—he shot two or three hundred yards past the box, with low gear engaged, his brakes being weak. He had lost his right footrest at the half distance, and so had an uncomfortable ride.

All honour is due to the Sunbeam, which stood so terrible a racket undauntedly, and hardly less to the Triumph, which ran so good a second in the hands of a youngster just of age.

**Old Firms do Well.**

The table of finishers on page 773 speaks for itself, most of the old firms having covered themselves with glory. Of the twenty-two to finish, the Sunbeam secured first, sixth, eighth, seventeenth, nineteenth, and twentieth places. Triumphs were second and thirteenth. The three Scotts all finished high up—third, fourth, and ninth. Nortons claimed five places. Alexander, on an unofficial Douglas entry, was seventh. The Indians had to console themselves after Dixon's mishap with the eleventh place, but without them the race would have been shorn of its chief interest in the later stages.

Wade can be proud to have driven a 350 c.c. into twelfth position in so fierce a struggle; and the A.J.S. people can be proud of the machine which carried him. The Rudge has not quite come back to its old supremacy, but Baldwin's place is satisfactory. The Sheffield-Henderson, on its first appearance, has finished very creditably in all three T.T. races. Mundey's New Hudson was much faster than fortune permitted it to demonstrate. The winner's time was actually 16m. 22s. faster than in 1921—4m. 5½s. less per lap.

# THE SENIOR T.T. WINNER'S EXPERIENCES.

## Bennett apologises for allowing his oil supply to run low. One narrow escape.

ALEXANDER BENNETT, who won the Senior Tourist Trophy Race last Thursday at an average speed of 58.33 m.p.h., won the French Grand Prix, also on a Sunbeam, in 1921. At that time we mentioned that he was born at Vancouver, B.C., and is 25 years of age. Employed at the Sunbeam factory at Wolverhampton, he has been a favourite during all the practising period, partly by reason of his magnificent riding last year and his French success. Bennett is of a retiring disposition, and finished the ordeal in surprisingly fresh condition, though he is frail, weighing but 9st. 10lb. His was not exactly a no-trouble ride, though he was full of apologies to his manager for running out of oil, for that represented his only worry. Stopping twice at the replenishment depôts (at the end of the second and fourth laps), he learned that he was leading, but on the last occasion was told that F. W. Dixon, the Indian rider, was hot on his heels. Since Bennett had run out of oil at Ramsey on this lap and had actually suffered a momentary stop on the mountain climb due to the piston running dry, he was stirred to redoubled efforts. To this point he had run on three-quarters throttle, but now he really bent his back and let his machine go. His time for the fifth lap—37m. 59s.—which included a stop for petrol and oil, is sufficiently indicative of this assertion, and on the sixth lap Bennett estimates that he would have comfortably beaten his own record but for the fact that his tank again became depleted during the mountain climb, and he slowed appreciably, and had, in fact, to "nurse" his engine all the way to the finishing line. From all points of the course we had learned of Bennett's magnificent cornering, his speed round Hillberry Corner exciting praise from all and sundry except on the last lap, when he gave every onlooker a thorough fright by swinging out after rounding the bend at a good mile a minute, and scraping by "a thousandth of an inch," as one observer put it, the bank by the roadside.

### A Temporary Lapse.

Bennett explained this temporary lapse by the remark that he had to listen carefully to the engine, as he realised he was forcing it along without oil and risking a seizure. In so doing he for once misjudged the corner—but this was his only mistake. Compared to other tracks over which he has raced Bennett is emphatic that the Manx T.T. introduces a much stronger personal factor than any other.

### Trouble with Goggles.

He was troubled by squashed flies on his goggles due to the speed at which he travelled, until finally he had to discard them. Bennett was a popular winner, stentorian cheers and waving handkerchiefs greeted his arrival, and on entering the enclosure Mr. A. S. Bowers, managing director of John Marston, Ltd., made a personal present to Bennett of the machine he rode. On removing the cylinder one recognised that naturally the single-ring aluminium piston had not been improved by lack of oil; indeed, it was quite dry and tight on its pin. Both piston and conn. rod were drilled, little or no carbon was evident, and otherwise the machine was in astoundingly good fettle. The Sunbeam's *average* lap time of 38m. 84s. beats all previous *record* laps comfortably. It is of the standard Sunbeam T.T. type.

The equipment included M.L. magneto, K.L.G. plug, Amac carburetter (the first six used this carburetter), Miracle oil in the petrol, Dunlop tyres, Brooks saddle.

# W. W. BRANDISH AND HIS TRIUMPH.

## Young Midland giant expresses satisfaction with his dry sump lubrication system.

WALTER WILLIAM BRANDISH, jun., the second man home, after occupying third or fourth positions until the end of the fifth lap, is the 21-year-old son of a well-known motor cycle agent of Foleshill, near Coventry. Standing 6ft. 3in. and weighing 13½ stones he is a fine youth. Though naturally bespattered with oil and dust after 227 miles at nearly 57 m.p.h., we found him in remarkably fresh condition and showing no outward indication of exhaustion as a result of his strenuous ride. Standing by his Triumph machine as the official examiners removed the cylinder for measuring purposes, his young eyes glistened as he saw the magnificent state of the piston and rings which were covered with a fine film of oil. Neither piston nor connecting rod was drilled in any way. The piston was of the now well-known Ricardo aluminium slipper type with two rings at the top, and the first-rate internal condition was undoubtedly due in a large measure to the positive system of feeding oil to and from the crank case. Brandish was loud in praise of the oiling system, which relieved him from any anxieties in this direction, and, moreover, the Triumphs had no auxiliary pump as a stand-by, though many other makes adopted this precaution. Though Brandish never learned his position during the race, he naturally knew he was well up, for he enjoyed a no-trouble run, and only had two stops for replenishments, and was urged on by enthusiastic crowds at the different corners. Actually he might have improved his time but for one little incident. On the third lap at Signpost Corner he found his second gear inoperative, and thereafter he had to use first and third only, which handicapped him, particularly when climbing Snaefell.

Asked if he was "all out," Brandish assured us that his overhead-valve Triumph was capable of higher speed than he attained, but the state of the road surface would not permit him to let it go. Dust did not worry him unduly until after four laps, when, his goggles having become choked, he cast them aside. Brandish used home-made kneegrips, Shell spirit, Speedwell oil, B.T.H. magneto with K.L.G. plug, Coventry chains, and Brooks saddle. We examined the Dunlop Cord tyres which were fitted to the machine, and, though naturally the tread of the driving tyre bore slight traces of wear, the front cover might have been new. Brandish rode in last year's T.T. on a Rover, and was noticed by *The Motor Cycle* at the time as a consistent rider. He occupied thirteenth place on that occasion, and his lap time variations were extremely slight.

# SHEARD'S POPULAR SUCCESS.

## Nail found in rear tyre of Junior winner's machine.

NEVER was a T.T. won by a more modest and retiring rider than Thomas Mylchreest Sheard, who is self-effacing to the point of shyness. Immediately on the conclusion of the race he went home, leaving his wonderful A.J.S. for the crowd to admire.

A Douglas man by birth, his success was very popular; in conversation he confessed he did not know his position until his replenishment stop at the end of the fourth lap, when he was told that Le Vack was leading. He had no outstanding incidents, experienced no involuntary stops, but had to climb the mountain slowly on his second and fourth laps owing to oil shortage.

Excepting blistered hands, Sheard was quite unaffected by his fine ride. This was his sixth T.T. Last year, third in the Junior and ninth in the Senior, he is thirty-four years old.

During the examination a nail was found in the rear tyre, but the front cover was unmarked. He used Hutchinsons, with Impervio. His machine was geared 5, 6, and 9.5 to 1; his engine was as good at the finish as at the start. Steel pistons were used on all the A.J.S. machines.

The variation in Sheard's lap times was 2m. 43s., his fourth lap being the fastest and his last lap the slowest.

# THE RACE FROM DIFFERENT POINTS OF THE COURSE.

ONE cannot consider the Isle of Man course to be ideal, but it has many good points, of which not the least is the fact that, provided the visitor keeps outside it and rides a good mount, he may see the race from many different places and at all different points of the compass. I chose Ballacraine as a sort of centre; it has a telephone and is in touch with headquarters at the start, a narrow passage is left behind the barrier, through which a solo mount can be wheeled on to the Peel road, and some magnificent riding can be witnessed there.

Here the course turns to the right towards Glen Helen, an easy curve, it is true, but this makes it exciting, and the Senior men knew it to a fraction. Comparison with the performances in the Junior Race was most interesting, and after making a careful study of the machines at five different places, I have no doubt in my mind that generally the Senior mounts travelled as if made for the course. The Senior men as a whole cornered much better than those in the Junior event, and the machines held the road in a wonderful manner.

### Lap One from Ballacraine.

At 10.8 No. 1, H. R. Davies (548 A.J.S.), hove in sight, swooped majestically round the corner and disappeared. De la Hay, who had slowed down at the warning boards, actually accelerated before taking the bend, which he negotiated with all the skill of which he is master. Greenwood (492 Sunbeam) arrived with his stable companion, Brown, a length behind, but once on the Kirkmichael road Brown took the lead. Clapham (486 Scott-Squirrel) took the corner in dashing style, and the change of note as he altered his gear caused many a laugh among the crowd. Hollowell (490 Norton) was one of the many who knew just how far he dared lean over, and I could swear his exhaust pipe cleared the ground by no more than an inch. Anstice (499 Douglas) gave us the first thrill as he shaved the wall of the inn, but Ballacraine itself was devoid of incidents, so I hied me to Ballig.

### The Bridge of Leaps.

Ballig, with the accent on the "*ig*," is one of the favourite viewpoints of the T.T., being highly spectacular, but not dangerous, if taken properly. Poor Jackson (Sunbeam), last man on the entry list, was the victim of an error of judgment. Alas! he steered too central a course, came off head over heels, and for him the race was finished, as his machine suffered the damage which he himself had fortunately escaped, and this in his first lap.

An excellent view of the jumps was obtained from the wall of a ruined cottage. Wood (Scott-Squirrel) made a splendid leap, and one heard his forks crash as he regained Mother Earth, but never the sign of a swerve could be detected.

Even more sensational was Dixon (Indian), who took the bridge in his usual daring manner. Then came Bennett, whose wonderful riding was even then appreciated, as amateur timekeepers were already crediting him with a record lap. But enough of Ballig.

### Creg Willey's Hill.

So my own mount was put to the rough road to Ballavaish and left outside a gate; next followed a lovely walk down the hillside along a path leading to beautiful Glen Helen, out of which rises Creg Willey's hill—the terror of early T.T. events. Here Greenwood (Sunbeam) met engine trouble, and, knowing he was finished, ran down the hill, like the good sportsman he is, to help Tucker (Norton), who had had the valve pulled out of his front tube. Both worked like heroes, and Tucker was off again just as Wood's buzzing Scott sped by on its fourth lap.

### A Fast Stretch.

Cronk-y-hoddy, a fast stretch, but still on the upgrade, was not far away, so thither I went. Here men flashed by without incident, so back to Ballig, where all was proceeding merrily, and then to Ballacraine again. Competitors were now passing on their fifth lap, when suddenly a doctor was heard to remark, "Not serious, but a hospital case most certainly. We must have him X-rayed." But who was it? Evidently the doctor had been too busy to note, and people wanted to know badly, so on by foot to the Hawthorne Inn.

It appears that Johnson (Sunbeam) was in the act of passing No. 13, Norris (Beardmore), who clearly ought to have met misfortune with such a number, but no! No. 58 skidded and fell, and was somewhat damaged, but well able to sit up and take notice on our arrival, and eager to watch the racing. His helmet saved his life. Here Carton (Norton) was reported to have retired with a broken piston, and poor Tucker was again in trouble with his front tyre one mile east of Ballacraine. Back over the hills to Braddan, where the observer reported the retirements of Harveyson (Triumph) and Ollerhead (Colmore-Douglas), and the stopping in his second lap of Danskin (Rudge) for ten minutes to replace a valve.

E. M. P. B.

# IMPRESSIONS AT BALLAUGH.

A SLIGHT haze failed to temper the heat of the sun, but discomfort was forgotten by the spectators at Ballaugh, when the first man, H. R. Davies (A.J.S.) came through at about 10.20 a.m. with a substantial lead. Then followed Brandish and Wood, the Triumph and Scott exponents.

Ballaugh Bridge is in some ways more troublesome to the riders than Ballig Bridge. The approach to Ballaugh is on the twist, a jump is almost inevitable, and before a safe landing is made the steering must be corrected to enable the narrow village street to be negotiated. Generally, the exhibition of riding at this point was admirable, and 1922 machines obviously hold the road better than last year's mounts, for there was very little actual jumping, although most back wheels came off the road at the crown of the bridge. Clapham's Scott was the only machine that "aviated" quite clear of the ground, and he had quite a wobble on recovering.

Even so early in the race as the first twenty miles one or two engines appeared in distress. Cowley's (jun.) Norton knocked badly when picking up at Ballaugh, and so did Davison's Sunbeam.

At Sulby, too, the cornering was of such a high standard that thrills were denied to the large gathering which lined the banks beside the road.

It must have been the excitement of the race that caused Clapham again to go a little too fast, this time with more serious consequences, for he struck the wall and stopped, restarting again almost immediately; on his subsequent laps he rode much more cautiously. Riddell and Watson-Bourne showed how well the Rudges steer, for they took the approach to Sulby Bridge at a tremendous angle.

### Consternation.

R. Bownass's accident created some consternation amongst the crowd at Sulby. He was coming down the straight approaching the bridge at a high speed when the steering column of his N.U.T. broke away; with only the top links holding the forks to the machine he fell, yet came to rest undamaged.

Brandish also nearly came to grief at Sulby on his second lap—either he missed his gear change or got confused, but anyway, he only missed the bridge wall by fractions of an inch.

Good riding marked the bulk of the performances on Ramsey Hairpin. Since last year, indeed, there seemed to be not only a marked appearance of greater surety but also a visible increase in the speed at which the acute bend was rounded. Undoubtedly, the most informative incident occurred in the third lap, when Strange (Sheffield-Henderson), Knowles (Norton), and Riddell (Rudge) came round the hairpin in a cluster on the third lap; the former showed infinitely superior acceleration, leaving the others well behind. Langman's Scott showed such engine power that the rear wheel spun as he opened the throttle and he narrowly averted a skid.

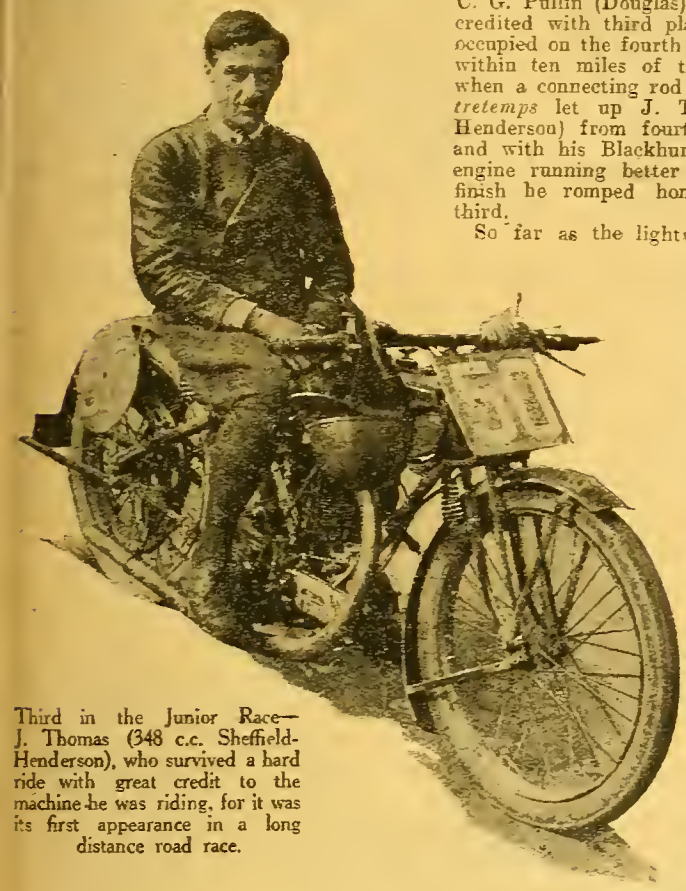
### Missing.

Porter (New Gerrard) stayed here some time, but after adjustments he was still in trouble with his engine, and although he restarted, he did not reappear on another lap. At Ballaugh, Sulby, and Ramsey, great excitement was created by the ding-dong duel between Brandish and Wood, but the Triumph rider ultimately came round alone, leaving the Scott man well behind.

# THE SHEFFIELD-HENDERSON ASSERTS ITSELF.

## Third in Junior and Fourth in Lightweight Races.

BY scoring third place in the Junior T.T. and fourth in the Lightweight Race the Sheffield-Henderson machines have crowned a long list of successes in competition. The rapid rise to fame of this machine is the more noteworthy when it is realised that it is a machine introduced as recently as 1921. Jack Thomas occupied third place in the Junior race, occupying 3h. 47m. 28.6s. In the telegraphic report of the Junior race which appeared in our last issue, C. G. Pullin (Douglas) was inadvertently credited with third place, a position he occupied on the fourth lap and indeed to within ten miles of the finishing point when a connecting rod broke. This *contretemps* let up J. Thomas (Sheffield-Henderson) from fourth place to third, and with his Blackburne overhead-valve engine running better than ever at the finish he romped home a comfortable third.



Third in the Junior Race—J. Thomas (348 c.c. Sheffield-Henderson), who survived a hard ride with great credit to the machine he was riding, for it was its first appearance in a long distance road race.

So far as the lightweights were concerned, L. Padley (Sheffield-Henderson) came home fourth. Again using a Blackburne engine, Padley rode magnificently, and might have been higher in the list but for unexpected events. He fell once and also had to change a plug twice, the first time due to fitting a long plug which the high-tension wire would not reach. Again, on the third lap he narrowly missed a fall on the Gooseneck which without thinking he charged all out and had to shoot up the bank before he could regain the road again. No manufacturer was more pleased with the showing of his men and machines than L. B. Henderson—a clever metallurgist who had tended his T.T. machines with almost loving care. Mr. Henderson has but one leg, and he was showered with congratulations on all hands.

L. Padley and his 248 c.c. Sheffield-Henderson, on which he performed very creditably, finishing fourth in the Lightweight T.T. Race.

The rakish lines of the Sheffield-Henderson were the object of much favourable comment at the last Olympia Show.

# T.T. INCIDENTAL NOTES.

Never has the weather been more perfect—not a drop of rain fell throughout the events.

* * *

Thursday's crowds for the Senior Race were noticeably larger than on Tuesday, and a general holiday was proclaimed in Douglas on that day.

* * *

The Rudge slogan was:

"When you see the Rudge go by
Cheer and wave your Hank—y!"

There were literally hundreds of green handkerchiefs distributed round the course by the firm.

* * *

The Sheffield-Hendersons were the surprise packet of the Junior and Lightweight races.

* * *

Condolences to C. G. Pullin (2¾ Douglas), who had to retire ten miles from home with engine trouble when actually in third position of the Junior race.

* * *

June 1st, 1922, will go down in history as the day of the hardest motor cycle race ever run. There was a more serious atmosphere over this event than the other two, perhaps naturally since it is the oldest event of all.

* * *

W. W. Brandish's first lap in 39m. 38s. on a Triumph opened spectators' eyes. He is the son of a well-known Coventry agent, and a leading member of the Coventry and Warwickshire Motor Club. Another meteoric opening lap was H. Le Vack's, on his "Junior" 350 c.c. New Imperial-Jap, in 40m. 47s. Of course, Bennett's Sunbeam record in the second lap of 37m. 46s. took the palm, and with a side-by-side valve engine too!

* * *

T. C. de la Hay had a no-trouble run, but misunderstood the message he picked up at the depôts, or he might have opened out more.

Second and third Senior men carried registration number plates H.P. 2933 and A.U. 15.

* * *

C. Waterhouse, possibly the youngest rider, punctured three times, but otherwise suffered no troubles. He finished twentieth.

* * *

Blackburne engines showed up conspicuously well in both the Lightweight and Junior Races. In the Lightweight Race they were second, fourth, seventh, and ninth, and in the Junior third, fourth, fifth, eighth, and ninth.

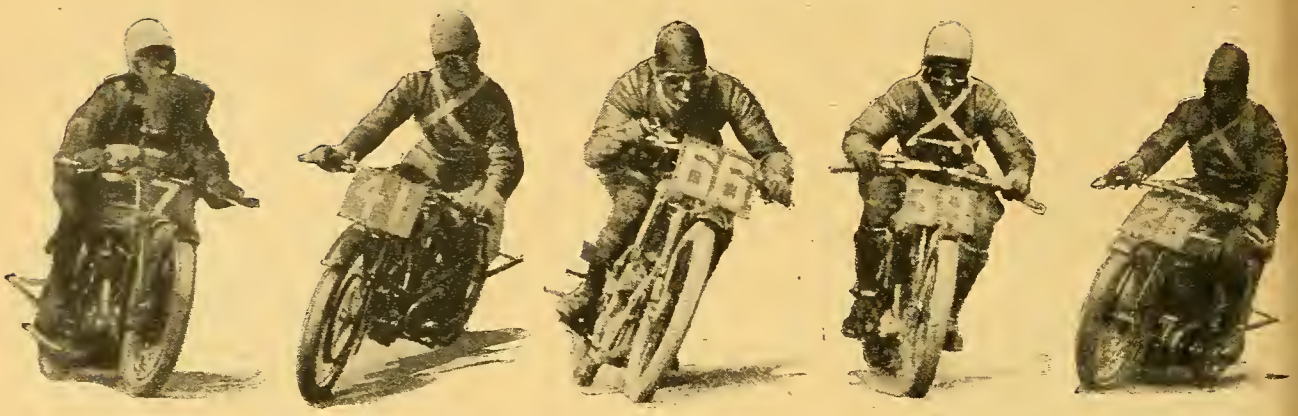
* * *

It is said that the Senior winner will net between £1,000 and £2,000. Good luck to him!

* * *

Every event produced a British success, but one would prefer to see a more international flavour about the T.T.

TYPICAL RIDING ATTITUDES IN THE SENIOR RACE



G. H. Tucker. V. Olsson. H. Langman. J. W. Shaw. A. Carton.

**T.T. Incidental Notes.—**

The engine of one solitary make which let its rider down badly on the mountain was attacked by him with a hammer.

* * *

Davison, who won the Lightweight Race on a Levis, used Price's Huile de Luxe. Miracle Oil, the new fireproof cylinder lubricant, was used by all the winners.

* * *

E.I.C. Magnetos, Ltd., who presented small pen-knives to contributors to their charity fund, were able to hand to Noble's Hospital the sum of £43 6s. 6d.

Last minute changes of equipment caused much annoyance and adverse criticism throughout the island.

* * *

Ivys were the only two-strokes in the Junior event and finished seventh, tenth, and twelfth.

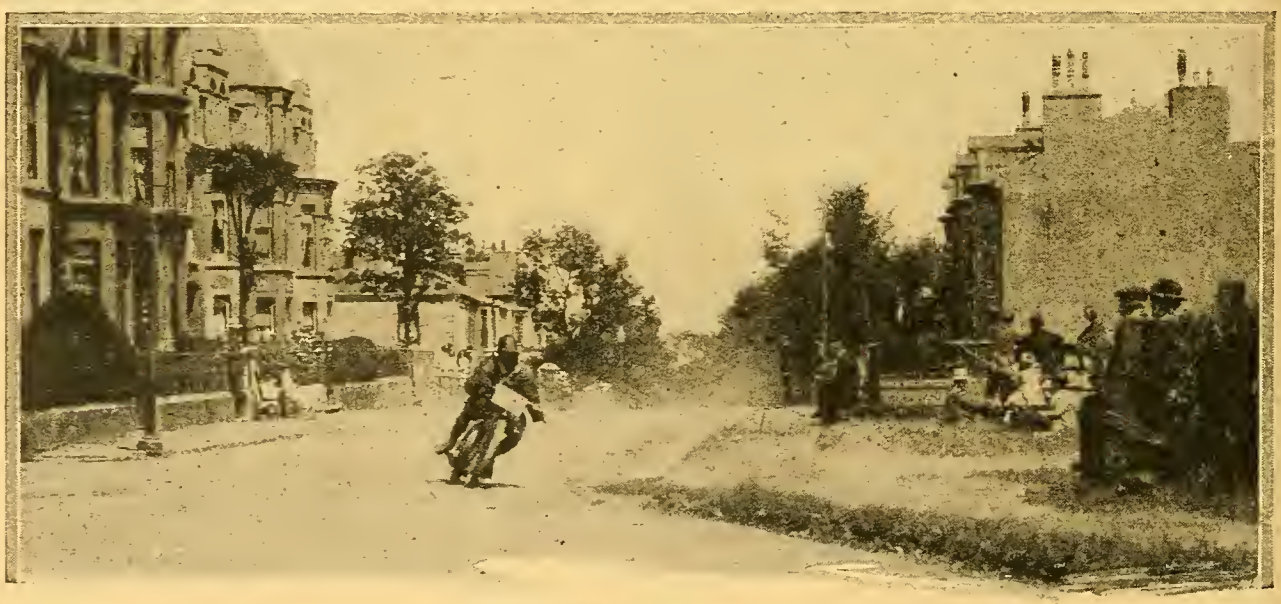
* * *

The New Hudson senior entry was in the nature of an experiment, since the firm have not attempted speed work for some time. Under these circumstances Mundey did well to finish on a modified standard machine, averaging 45.58 m.p.h.

Once again—for the third year in succession—the Junior Race became a duel between A.J.S. and Blackburne engines. While the former secured the two premier honours, Blackburne engines were fitted to the Sheffield-Henderson (third), Coulson (fourth), and Cotton (fifth).

* * *

The sight of the competing machines as they are massed for the start must warm the hearts of manufacturers of insulating tape. Surely in this year of grace there is some better method of securing fittings



Hurtling through the town of Ramsey. F. A. Longman (A.J.S.), who gained a place for one lap in the Junior race.

## THE TROPHIES PRESENTED.

ON Thursday night, after the Senior Race, an absolutely packed audience witnessed the presentation of the prizes by the Lieut.-Governor of the Island. Bennett, the Sunbeam rider, who made such a fine winning ride, was called for loudly.

Brandish also received loud and long cheers, and although both were called upon to speak, only the former was able to express his feelings; his speech, however, was quite inaudible to most.

Bennett's friends, of course, promptly seized him and chaired him round the spacious dancing-floor, despite a crush of some thousands of people.

Keen disappointment was felt at the non-arrival of the Scott contingent from Ramsey to receive their gold medals, and, in Langman's case, the third prize also—the explanation of this absence was made later, when it was learnt that the taxi which was bringing the party from Ramsey missed a turning, and in the subsequent crash some damage was done, especially to Langman and C. P. Wood, who had to be removed to hospital.

# OCCASIONAL COMMENTS.

By "IXION."

## I Recant.

VARIOUS diseases are incidental to youth. Measles is one of them. A few years later you get stage door fever. When I was at that age, a musical comedy called *San Toy* used to wheedle the money from youthful pockets. Its cast included a fat emperor, who quivered with joy like a jelly when the *première danseuse* pirouetted in front of him. Which things are a parable. The other day I went to a cinema. The Yankee comedy hinged round a Ford car, which dithered violently in huge 3ft. tremors whenever its engine was running. This also is a parable. For these two motions—the infinitesimal but eternal quiver, and the large abrupt jolt—are characteristic of the road vibration to which motor cycles are liable on modern roads. The original solution of this problem was the spring frame. Latterly, we had heard a lot about the merits of 3in. tyres. I wobbled in my convictions. Finally, sanity has returned. I still hold that 3in. tyres will confer a vast deal of comfort. But I further plead that when we get the perfect spring frame we shall prefer it to a mere big-tyre-and-good-fork solution.

## And Why——

MY change of heart on this burning topic is due to practical demonstrations of two more or less experimental spring frames. On one of them I have seen the inventor ride over the most appalling surfaces. Side by side with him travelled other men on other frames. They vibrated so rapidly that the eye could not follow their movements quickly enough to pick out the details of their personal appearance and attire; and, in addition to this quivering, reminiscent of the emperor in *San Toy*, they bounced enormously, like the Ford car on the invisible mechanical oscillator in the film comedy. But the spring frame demonstrator moved forward as steady as a statue on its pedestal. You could almost count the separate hairs of his moustache, examine the pattern of his tie, note the ornamentation of his cuff links. And he did not bounce. The point of his nose followed an even track precisely conforming to the hill contour. The contrast was extraordinary. Bentley and Draper, who handle the Ricardo piston in town, also have a new spring frame of which I hear the most glowing accounts. Wait and see.

## Spring Frames on the Track.

THE average club speed merchant would scoff at the notion of a spring frame having any record-breaking value on Brooklands. But the No. 8 hats are veering round to the conclusion that 90 miles in the hour on a 500 c.c. motor cycle and 100 mies in the hour on a small car, together with other keenly coveted records, depend almost as much upon springing as upon engine design. Come to think of it, when your saddle is jerked a foot off the concrete, it is engine power which lifts you: and you don't get that engine power back. You are wasting power in the vertical plane, which is urgently needed to knock those few seconds off the lap time of Pullin, or whoever set up the figure you are out to beat. Then, too, while your back wheel is off the ground it is wasting more power in beating the air, power which might as well be utilised in propelling you on towards the timekeeper. If these notions are sound, we may see the record-breakers scurrying about to get hold of super spring frame designs, and that in a not too remote future. I am sorry that my brain doesn't run to surds and such symbols as the square root of $x^n$, or I might make this bald suggestion absolutely convincing.

## Magneto Reliability.

READERS should not grow nervous when they read of magneto failures in the big trials or on the track. No deterioration of workmanship is implied, and the tourist magneto is as good as ever it was, or better. But in a good many competitions magnetos are run up to absurd speeds, and this overrunning sometimes lasts for quite lengthy periods. For example, if you are trying to climb Tornapress on a sidecarette in a trial, and your emergency ratio is about 25 to 1, whilst the hill demands full throttle for nearly half an hour, that poor magneto is going to be subjected to stresses—heat stresses, mechanical stresses, and electrical stresses—which could hardly be produced by any test possible to a Saturday-afternooner. (Rather proud of that last phrase. Just thought of it. Hits off a certain type of rider, doesn't it?)

## A Strong Man's Tears.

PERCY was lying awake every night. It was true that he had reached the final of the golf cup, for which purpose he was temporarily domiciled at Bunker-on-Sea. But had not papa recently unloaded the needful for a B.S. Norton? Cruel that the thoughtless and selfish engineers should cease work just when Percy's engine was being assembled prior to its final track tune. So Percy spent white nights, lying on his back staring at the ceiling, and picturing himself taking blind corners at 80 m.p.h. One morning came a letter from little sister. He glanced idly through its artless prattle—hey, what's this? "*Mummy told me to tell you that the postman says there is a motor bicycle at the railway station.*" Percy volplaned out of bed, upsetting his undrunk morning tea. He ripped on clothes somehow, hurtled down to the golf club, drew a heavy pencil line through the first half of the secretary's notice. "FINAL: Percy

**Occasional Comments.—**

Smithers (8) v. the Hon. Azure Gore (2)." added three neat letters to his name (scr.). howled for a taxi, goaded its elderly driver to T.T. speeds, caught the express, dived on to the home platform before the train had slowed to 20 m.p.h.. and burst into the parcels office like Ludendorf's *sturmtruppen*.

Propped against the wall, swathed in corrugated cardboard, was a dinky little motor scooter labelled with the name of the vicar's elderly wife.

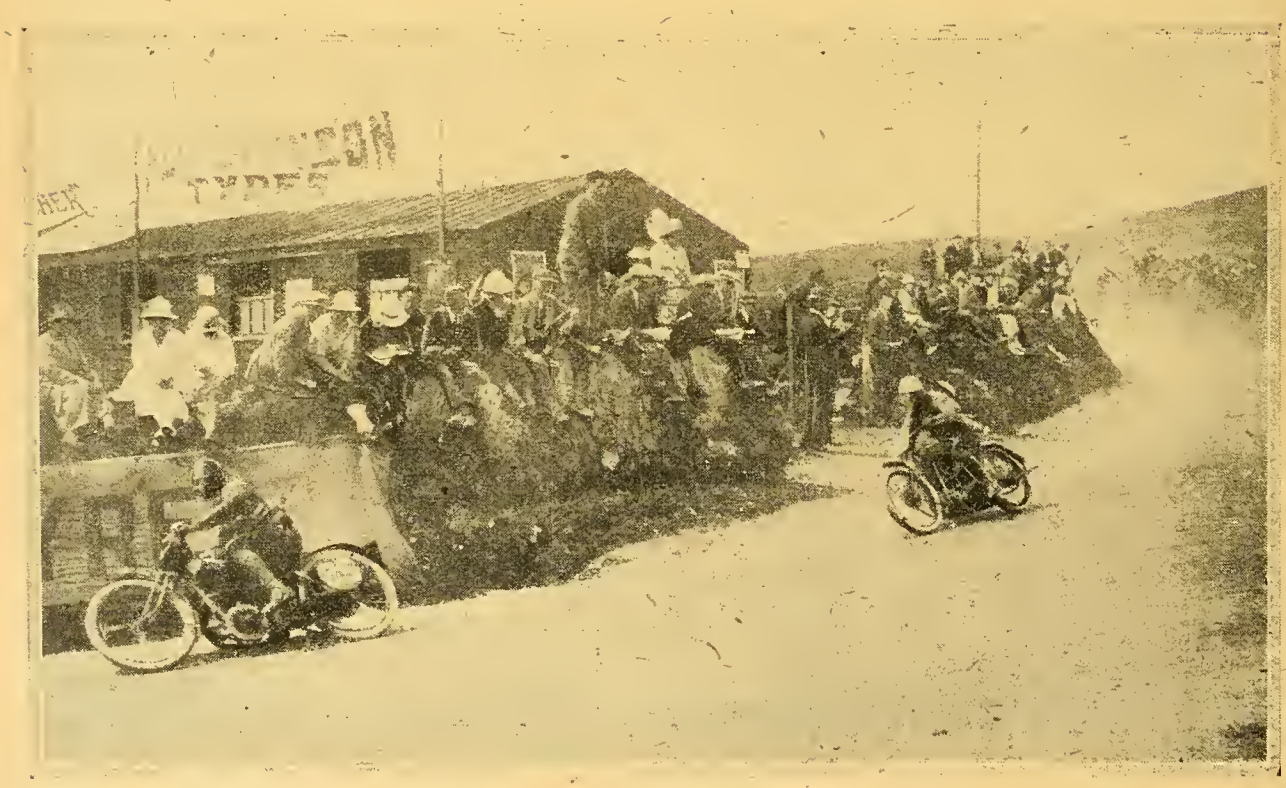
So Percy wept. D'you blame him?

## Scared Stiff.

WHEN I get wind up on the road, it is usually because I have done something silly, or some other idiot is driving as he shouldn't. But t'other afternoon you might have seen me proceeding along with my eyes popping from my head and my cap perilously poised on the extreme tips of my hairs. Yes, you are right first time—it *was* a speed wobble, one of the worst I ever suffered from. The speed was 18 m.p.h.—no more; and the vehicle—as you have doubtless guessed by this time—was a scooter, of all things. It had a nasty vertical sort of rake on its front fork and a Lilliputian front wheel about as big as a sparking plug washer, and after proving that I could manage her at her normal speed of 10 m.p.h., I rashly opened out to an adventurous 18. At this gait the unspeakable front wheel went into a wobble, quite as violent and irresistible as the wobble a rat gets into when a sturdy terrier has it by the nape of the neck. Why didn't I jump off? Well, for one thing to jump off isn't as easy as it looks when you are seated in an armchair on a wide platform and the handle-bar is level with your nose; for another, my right ankle is bandaged up as thick as an elephant's; but that is another story. How did the wobble end? As most wobbles do. My left ankle is now bandaged, too. So is my proboscis. And something else—I am not sure whether he called it a femur or a tibia.

## That Dud Bulb.

A NUMBER of electrical correspondents are still waging mighty battle in private letters to me about my tail lamp bulb which refused to light up, but continued to transmit current. The latest and most authoritative evidently hails from the Emerald Isle, since he talks of the "presence" of a vacuum. The purpose of a vacuum in a bulb is to prevent combustion of the white-hot filament, and so to prolong its life. He does not believe that the filament would survive many seconds if a tiny blowhole puncture existed in the glass. So—cheers for me—he votes heavily for my original suggestion, to wit, that the current was shorting through a crack in the cement of the bulb socket. He considers it common for the cement to be cracked whilst the owner is inserting the bulb into its holder, after which the cement rapidly goes to powder under the vibration. Moral: never remove a bulb without due cause, especially if it is head lamp size, with a big glass exerting marked leverage on the cement.



A fine speed impression at Craig-na-baa: T. M. Sheard (348 c.c. A.J.S.) winner of the Junior T.T. Race on the heels of L. Nicholson (248 c.c. Coulson).

# A Car Owner on Two Wheels

## Opinions on Motor Cycles and Some Experiences with the Ner-a-Car.

By OWEN JOHN, of "The Autocar."

NOT a motor cycle, not a scooter, not a car—but a "wheeler." This is how the firm responsible for the Ner-a-Car describes its new machine.

I write in fear and trembling of it in *The Motor Cycle*, for I have always had it instilled into me that this is a journal conducted, written and read entirely and solely by experts and that the least departure from strict accuracy is fraught with heavy and immediate penalty.

### Confessions of a Non-Motor Cyclist.

*The average woman thinks that she could manage a car while she regards the motor cycle as something too complicated. There are men—especially elderly men—who share the same opinions.*

*Why is this?*

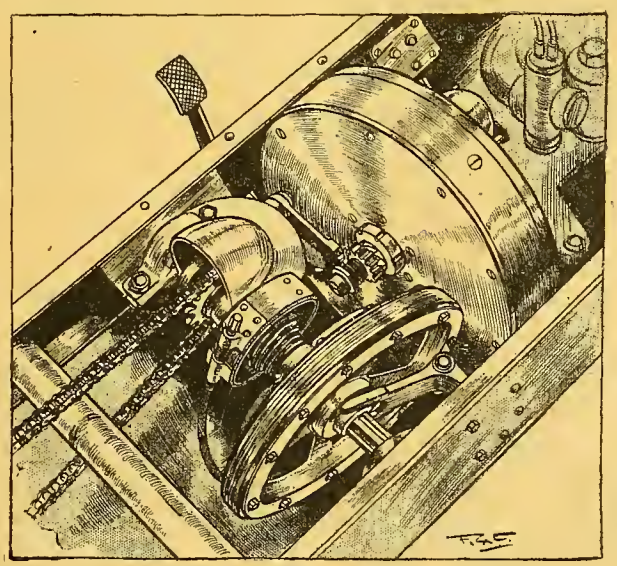
*The explanation appears to be in the fact that the mechanism of a car is unobtrusive and silent. Owen John's contribution seems to confirm this.*

But I will be brave and fear not. I am not a motor cyclist (cries of "Shame!"). I am too old at umpty-eight, too heavy at nearly fifteen stone, too valuable as a bread-winner, and quite happy as a car-owner and a self-appointed guide, philosopher and friend to several generations of four-wheel motorists. But I have succumbed to the charms and the speed and the safety of this new invention, and if I can only be assured that ordinary motor cycles are as easy, simple and safe to use, you may perchance find me in the Ardennes, in Ireland, in the Isle of Man, or wherever the next big motor cycle race may be, buzzing round the course clad all in leather and entirely cognisant of all the names of all the competitors and their mounts.

### Collective Experimenting

For a new era has opened to me—or, rather, it would have had not my family also appreciated the simplicity and hardiness of my new machine. I experiment vicariously, they do it almost all for me; only now and then do I take it out and amaze my friends and acquaintances with my apparent relapse into gay boyhood. It seems very simple, it seems very safe, I know it is very economical; when the sun gets warmer I am sure it is going to be very delightful indeed. For there seems so little in the Ner-a-Car that *can* go wrong, its accessibility is quite good, and its moving parts are nearly as few as those of a steam-engine, always my *beau idéal* of economy in machinery.

I have not had it long enough to be able to judge of its wearing qualities, a test for which only time and distance can tell, but it seems hardy and, considering that several people already have set their raw hands to it and promptly ridden off upon it, I think that it shows marvellously few signs of collision or of inexperience. Possibly the fact that one can ride on it as slowly as one can pedal a cycle may have something to do with the surprising confidence that beginners show upon it; a mount that goes off at twenty miles an hour with a roar often frightens away tyros by the mere thought that prodigies of skill are required to control the monster.



Variable friction-gear of the Ner-a-car, showing rack and pinion kick starter and countershaft brake.

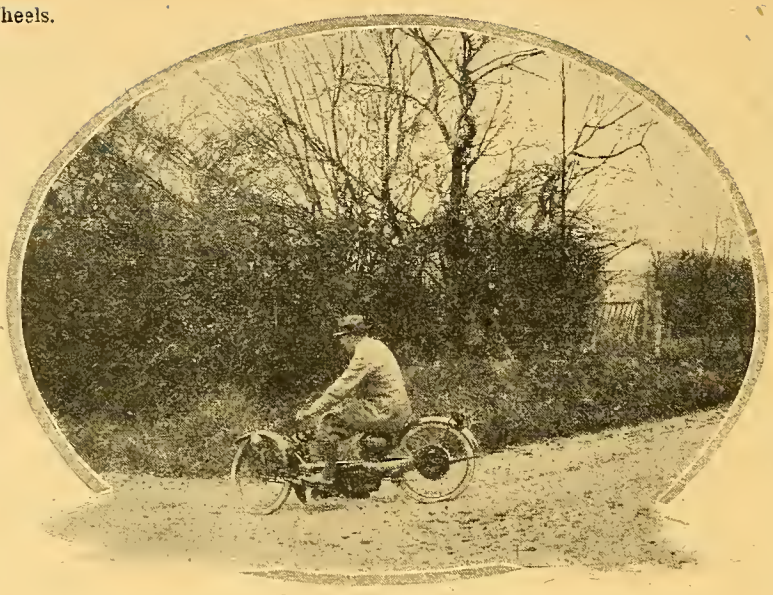
### For the Multitude.

A gentle and docile machine is a standing invitation for a new scale of humanity to take up motor cycles, for it cannot be denied that hitherto the movement, as we know it, has been more attractive to the young and hardy than to the man or woman who is more in search of comfort

**A Car Owner on Two Wheels.**

and convenience than mere speed.

Thousands of potential buyers exist amongst the latter class; they want a mount that can do its 30 m.p.h. up and down ordinary hills, that can steer like a fish, make its own light, and can carry an extra passenger when necessary on the flapper-bracket. The Ner-a-Car does all these things, and yet all the time, owing to its centre of gravity being so low, the rider does not seem to be doing anything bolder than just sitting on a cushion. Perhaps the fact that it possesses a chassis, a clutch, a two-stroke engine, five speeds, a footbrake, and that it steers like a car may lend it an extra sense of security. I do not know: all that I am aware of is that through it I have learned to appreciate the value and the economy of the two-wheeler, and in future shall be able and happy to count myself among the number of its devotees.

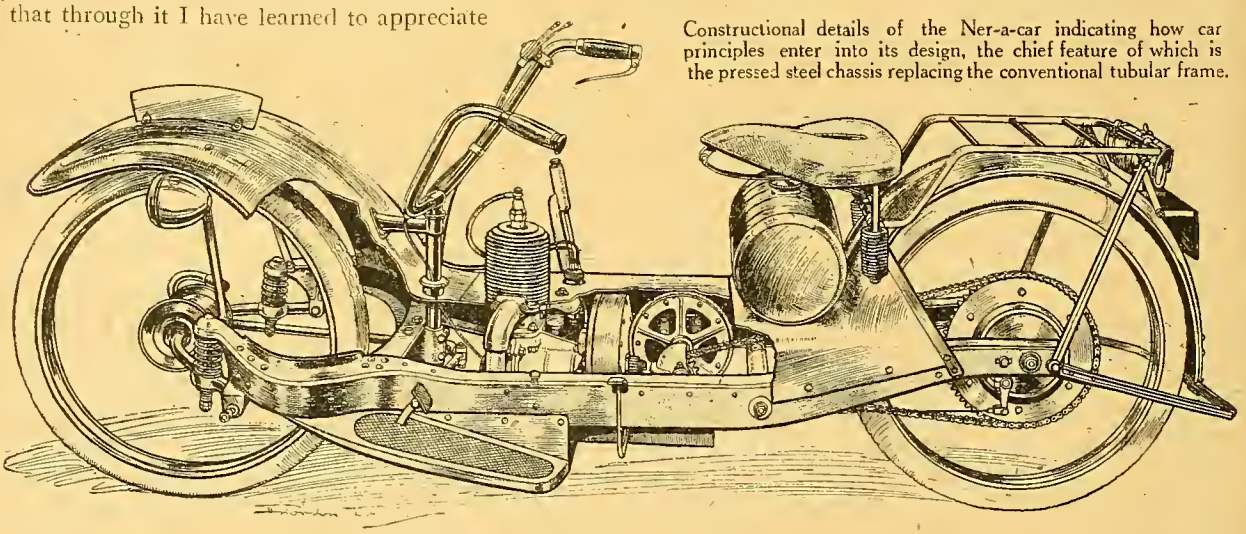


The extremely low riding position will be gathered from this illustration.

A curious thing was I found the pleasure derived from the handling of a motor cycle quite different from the pleasures of car driving; altogether apart from the motor cycle's handiness, its sporting appeal alone made it attractive.

A cheap, handy, well-made machine that, to parody the words of Mr. Jorrocks, can give "all the joys of the motor cycle with only twenty-five per cent. of its (imaginary) dangers" is something that an extraordinary number of people are looking for.

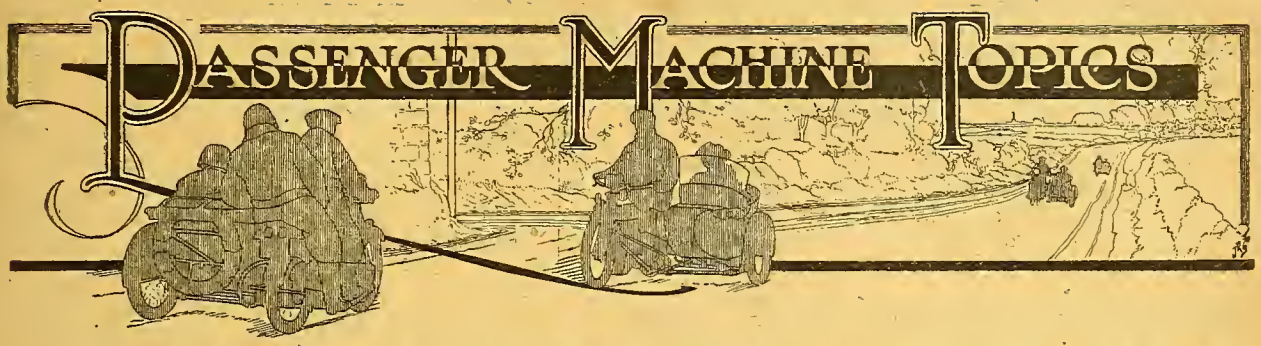
Constructional details of the Ner-a-car indicating how car principles enter into its design, the chief feature of which is the pressed steel chassis replacing the conventional tubular frame.



## OIL WHERE IT IS NOT NEEDED.

OIL, as the mere tyro knows, is essential for the good running of every piece of mechanism. Dirt has been described as "matter out of place." When oil is out of place, this lubricant and dirt are synonymous. The proper place for engine oil is in the crank case, the oil tank, and the various bearings. Engines can be, and are, made oiltight, but unfortunately there are makers who do not appreciate the quality of cleanliness in this direction. The motor cycle should be everybody's mount. Although the movement has progressed to an enormous extent it will never reach the popularity it deserves until the only necessity for overalls is concerned with the weather. Special or improvised attire to protect the rider against oil flung from the engine or gear is an indictment against the machine he rides.

We most earnestly assure manufacturers of motor bicycles that the point to which we have drawn attention is a most important one, and once a machine gains a name for cleanliness from oil it should, provided it is equally satisfactory in all other respects, gain a most enviable reputation. This is a point which the A.C.U. could consider. Why not serve out six days' competitors with white overalls.



## What Passengers Should Not Do. The 2,000-mile-a-Year Sidecar Owner and the Present Taxation.

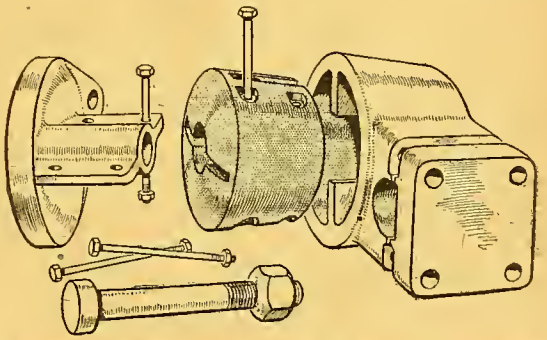
By "FRIAR JOHN."

NO more pleasurable occupation exists than that of planning out a summer tour, especially when seated by the fireside with good maps on a cold, wet night, buoyed with the knowledge that the holidays are near and the machine ready for the road; yet not a few write to the Editor asking him to plan a tour for them. Such a query is intelligible when one wishes for the best and most direct route to a given place, or details of interest in a particular district, but for someone else to plan where I should travel, and possibly where I should eat and sleep for fourteen to twenty precious days, and what views to admire, surely takes the spice from the curry. I desire the passenger also to take an intelligent interest in the map and to maintain a celestial indifference to the idiosyncrasies of my machine and my driving, especially on steep hills; to join in my enthusiasm for exploring by-roads which I confess have often led to disaster and ignominious retracing of the track. In short, when on holiday I like to go whither the spirit takes either my passenger or myself. There are many who tour in a like manner, for I have met them on the road, wandering along to the north, to the south, or the east, or the west, on any route they fancy.

MUCH has been written and spoken about the desirability of flexible sidecar connections, and it is generally admitted that absolute rigidity is by no means ideal. A slight amount of flexibility in the rear attachment is almost essential and will save much frame distortion; already more than one patent has been filed on subjects relating to this important point.

The illustration shows the invention of Mr. W. H. M. Higham, A.M.I.A.E., of 56, Moorpool Avenue, Harborne, Birmingham, and it may best be described as a "cush" connection, since it is somewhat similar in principle to a well-known type of "cush" hub.

It will be seen that the lug bolted to the chain stay carries a conical boss having opposed vanes on its inner diameter and a spherical outer face. Into this boss fits a rubber block suitably slotted to take the vanes, and bolted lightly to similar vanes mounted on the outer or sidecar attachment member. These parts are held together by a central bolt, and form, to all intents,



The Higham flexible sidecar connection dismantled to show the construction.

a universal joint slightly flexible in all directions. How the vertical flexibility is obtained will be quickly grasped, but it is perhaps necessary to explain that a slight degree of lateral flexibility is allowed by the spherical faces of the inner and outer members working over each other against the pressure of the rubber block. Broken lugs become a thing of the past.

A device for those who dislike goggles, but desire protection for the eyes and face. The illustrations also show how the "Phace" screen is carried when not in use. Messrs. Coupé Windscreens, 74, Lennox Road, Portsmouth, are the makers.

OUR sister journal, *The Autocar*, has ever championed the cause of the owner of little cars, in spite of its reputation as a "big fellow's" paper, and I was glad to see that it did not intend to let the question of

**Passenger Machine Topics.—**

taxation remain undisturbed. neither does the A.A., which is shortly making representations to the Government. We suffered the present rates at the time they were imposed under protest, though some motor cyclists persuaded themselves they were necessary if any road improvement at all was to take place. A reduction in the taxation will naturally be particularly welcomed by owners of very small and old cars, and by the same calculation sidecar owners will appreciate a more equitable application of the tax. There are thousands who do no more than 2,000 miles a year. and this works out at nearly ½d. per mile for taxation, a much too big amount, considering the sidecar's light weight. The agitation for the more just taxation of petrol at the source must eventually have the desired effect, in spite of the supposed difficulties of collecting the revenue.

◈ ◈ ◈ ◈

IT is not every man who cares to purchase a new outfit each year, or even every two years. Apart from the question of cost, there are certain advantages in retaining the old bus for a lengthy period, although sooner or later one is confronted with the alternative of having the sidecar repainted by coach-painters or enamelling it oneself. Probably because Messrs. Robbialac's instructions led one to believe that the operation is a simple one. I undertook the job of painting the old shopping bus. the " ever-ready " and always reliable vehicle of convenience which is used at any time and at all times between trial runs on new outfits. Well! enamelling is simplicity itself. Not being a coach-painter by instinct, I simply cut out the Robbialac instructions by half. so to speak. rubbed down the body with a felt pad and pumice powder. then washed it. When dry I brushed on the enamel; when that was dry I gave it a wash with clean water. afterwards applying the varnish. Two evenings' work was quite sufficient for the job. and really it was not half the business I thought it was going to be.

◈ ◈ ◈ ◈

WHERE is the cheap four-wheeler " which was—and is—according to some prophets. to oust the sidecar? This question has grown into quite a hoary-headed old poser. and bids fair to remain a query and a topic for many moons. From time to time we publish details of most promising designs, we hear rumours of wonderful schemes of mass production, of the " perfect substitute for a sidecar." But the rumour soon fades away, and we hear no more of these promising designs. The meritorious little Carden and Tamplin are very much alive and kicking to show the way; but the sidecar still holds pride of place, and insists not only on retaining its just popularity, but on increasing its remarkable vogue.

◈ ◈ ◈ ◈

AMONGST the letters which have reached me this week, there is an offer to find me a house with garage space at the side—ideal, of course. in situation, elevation, and sanitation—an offer in response to my remarks on lack of garage space in many of the new houses at present being erected; another letter contains a request from an old sidecarist for further assurance anent the back wheel of three-wheelers before he abandons the sidecar. I gave him all the assurance I could. and by now he is probably satisfied that the rear wheel of the three-wheeler need not be more trouble than a pair of hind tyres on a four-wheeler; another correspondent deals with racing sidecars, and asks the following startling query: " Why not a sidecar T.T.? "

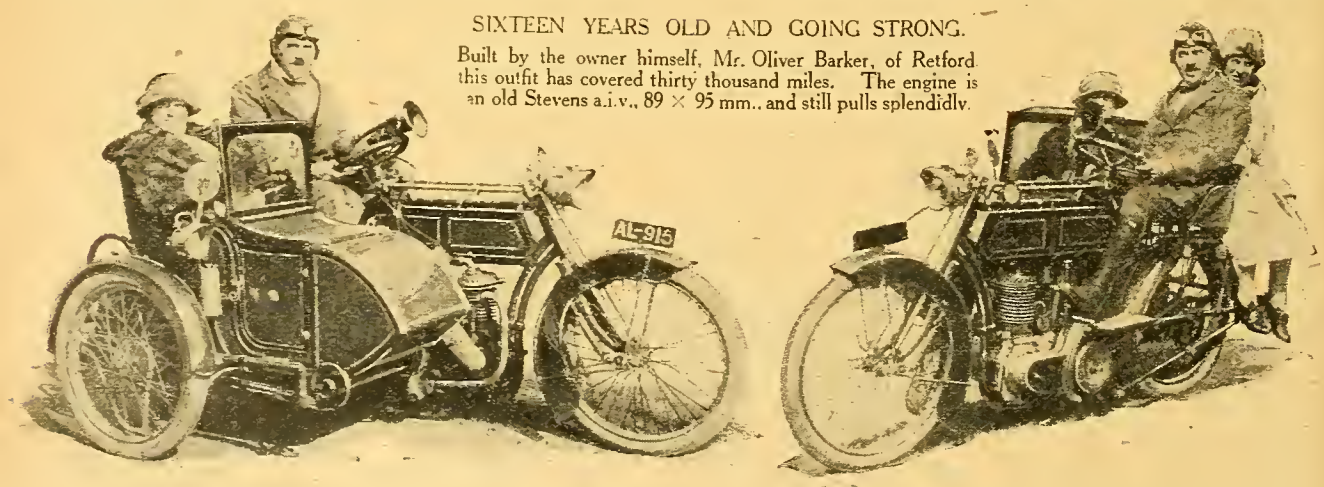
◈ ◈ ◈ ◈

I WONDER what the A.C.U. would think about a sidecar T.T.? And whilst we are on the subject it had better be put to Mr. Loughborough; he really should not escape this question. He has apparently got rid of the private petrol consumption test problem and the amateur race problem; now what about a sidecar T.T.? I wonder what O'Donovan would say, or Pullin Davies. Dance. De la Hay. and a host of others who have had sidecar experience at Brooklands and at hill climbs where phenomenal speeds are obtained and where bends are negligible—I wonder what they would think of hurtling around the T.T. course on a sidecar?

My correspondent did not give his reasons why a sidecar road race ought to be held. Maybe the same good reasons that apply to the holding of the three T.T. solo races would justify a sidecar event. Surely we have not reached finality in sidecar-chassis design?

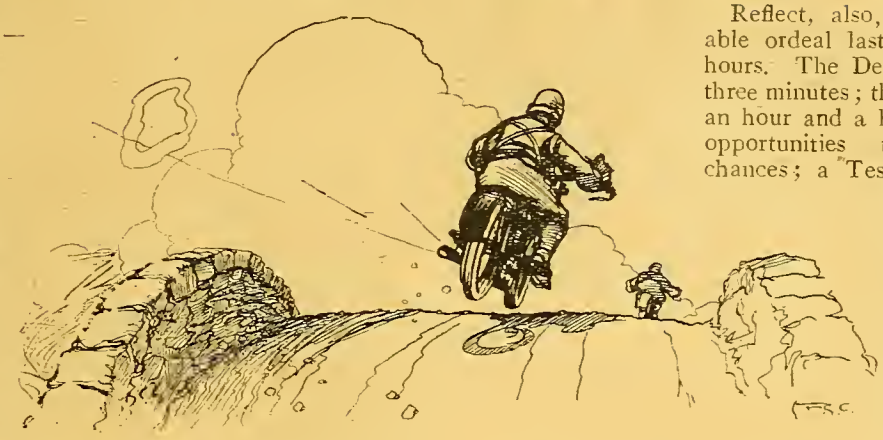
SIXTEEN YEARS OLD AND GOING STRONG.

Built by the owner himself, Mr. Oliver Barker, of Retford this outfit has covered thirty thousand miles. The engine is an old Stevens a.i.v., 89 × 95 mm., and still pulls splendidly.



# WINNING A T.T.

## First Place in the I.O.M. Races, the most hardly-earned Honour in the Sporting World.



OTHER sporting events — the Derby, the Cup Final, a Test Match, the Golf Championship — may attract larger crowds, provoke far more betting, and excite more attention all the world over, but I have always held that the Senior T.T. Race is infinitely the greatest fixture on the programme of international sport; and a very good case can be argued for this audacious assertion. Consider first the other newspaper boomed events.

In the Derby the horse counts for more than the jockey—a Flying Fox can win with almost anybody "up." In cricket and football and golf, the man is certainly everything, but in these events there is room for a bad blunder without the payment of any heavy penalty. Hobbs may give a catch in his first over, and be missed; Islip may miss an open goal, yet enjoy 89 minutes in which to work another opening; Duncan may drive into a bunker, and drop his second stone dead with a niblick; and in all these sports your opponent may balance your blunder by one of his own.

### Men, not Machines.

In a T.T. there are usually at least twenty machines good enough to win in record time. Which of them wins will be decided by the men who sit them. Moreover, the enemy makes no blunders. For in the T.T. a man does not have to beat another man—indeed, he seldom has more than a vague idea how the other men are running. He has first of all to master himself; and secondly, he has to master the inexorable laws of Nature, cold, impersonal, pitiless. Last year, for example, our very finest rider failed to finish. He was not beaten by the ultimate winner, H. R. Davies. He was not beaten by a finer machine, the A.J.S. He was beaten by himself and by physical laws. With the race in his pocket, he glanced up for the fraction of a second when a friend hailed him on a bend; in an instant his machine was plunging about on the rough at the roadside—then a stone fouled the front wheel, and he was out of the race. For such a tiny error there is no pardon in road-racing. The punishment is out of all proportion to the crime; it is as if a dropped catch at cricket always cost you 200 runs; as if every bunker at golf lost you 10 strokes; as if a ballooned shot at football meant your being pinned on your own goal line for the rest of the game.

Reflect, also, that this inexorable ordeal lasts for four mortal hours. The Derby lasts less than three minutes; the Cup Final takes an hour and a half, but is full of opportunities to recover lost chances; a Test Match occupies three days, full of long breathers, with victory incessantly tossed to and fro. But in the T.T. the riders are at full stretch for 240 minutes without so much as a single second's respite, and during every second of those 240 minutes their nerves are tense, their brains concentrated, their muscles tested to the uttermost. Moreover, the penalty which they court if failure comes is not limited to personal disappointment, or public humiliation, or financial loss. It includes a very real risk of physical injury. I know no event which provides so complete or thorough a testing of manhood in all its aspects.

### Six Essential Qualities.

Six factors, raised to the utmost limit, go to the composition of a first-class road racer. Eminent amongst them is the "reaction period." Pretend to throw something at the heads of two friends. One man's hand will fly up in self-defence a fraction of a second sooner than the other's. In the T.T. the speed with which the senses wireless the brain, and the speed with which the brain operates the muscles, are of prime importance. This factor counts at every corner. It counts in every emergency, as when the fellow just ahead does something he shouldn't. It counts particularly in overtaking along a rough, narrow road at 50, 60, 70 m.p.h.; and the winner overtakes somebody perhaps 200 times in the race. Then that indefinable sense of balance, so needful to excellence in every sport, is most of all demanded in driving a vehicle devoid of natural balance over so fierce a route as the T.T. course at T.T. speeds. Judgment of speed and distance—you, gentle reader, sometimes take easy corners at 30 or 40 m.p.h. With what indecision—throttle off and on again, brakes off and on again! That will not do in the T.T., where speed must be maintained up to the last inch, sliding round with just nothing to spare, and not a tenth of a second wasted in the roar with which she opens out once more. Daring—too timid a first lap has lost a man the race before now—yet not too daring, for every year a number of men start off too furiously, and are missing after a lap or so. Daring must be balanced by that cool restraint which never funks, and yet never shuns a legitimate or a possible risk.

As the slow hours wear on, and the body tires, and the familiar danger-points loom up like lightning, and

**Winning a T.T.—**

pass yet once again, the aching body and the weary brain must keep up all these virile qualities at their absolute zenith. So the perfection of physical fitness is essential.

In trade circles you may hear cynical remarks now and then about the financial aspects of victory, rumours of hard bargains driven by men with a name, and the like. You cannot run a world without a currency, and it pokes its ugly head into every sport. The Cup Final is won with the aid of somebody's boots, the golf championship with somebody's ball. Any good rider on the right side of thirty, with his career to carve, naturally makes the most of his abilities on a keen market; and with competition cut so fine as it is to-day, the firms bid high for the few real cracks to ride their bicycles. But once these inevitable preliminaries are settled, sport comes into its own: and the fact that the rider is paid, and paid as well as he deserves, does not alter the fact that his manhood is passed through a very fiery crucible in the actual race. Indeed, the fact that some of the riders are riding for cash as well as for glory, rather adds to the romance and the humanity of the race. For after all, cash is always convertible into something—perhaps something as domestic as a little home, and the consent of *her* papa, or a first-class education for that squaller in the bassinette. In racing, as in war, promotion is rapid, though purchased at grave risks; and once a man's foot is on the ladder, he may climb right away from what he used to be.

### Real Romance.

Nor do I personally forget or dislike the commercial interests at the back of the men. On paper a limited liability company is a soulless, unlovable thing; and the novels of the day try to make you visualise it as a little coterie of greedy, bald-headed old men. But if you have ever been put in charge of a concern which was none too prosperous, dropping money month by month and losing ground to better managed rivals, the struggle to pull things round is fascinating enough, and human to its core. Many a T.T. entry has been inspired by that kind of motive; whilst others who have, must try to hold. Ere now a big firm has grandiloquently decided, "We will win the T.T.!" The Board has allotted huge sums—perhaps £20,000—to the effort, and met only failure; while a petty little concern has done better on an expenditure of a few hundreds.

### The Designer's Part.

This brings us to a forgotten personage, who has more to do with our thrills in the Island than some people trouble to remember. I mean the designer. It ought to be plural, for there are many of them—tyres, ignition, carburetters, sparking plugs, valves, and the like, quite apart from the frame and the engine. To-day almost any competent engineer can produce a 500 c.c. engine which with the aid of a decent gear box, can lap as fast as human nature can circle the Manx lap. I feel a special respect for the metallurgists—those quiet, spectacled folk in the laboratories—who give us valves that won't snap or stretch, springs which flex and reflex without tiring, and pistons that won't grow. Every detail tells; and most of all, perhaps, the frame—watch the Scott frame on a corner like Hillberry.

The tuner? Sometimes he is the rider, too, sometimes not. But in the Senior event the tuning doesn't mean so much as it does at Brooklands. So fast are the 500 c.c. engines of to-day that one must tune for reliability rather than for speed.

So let nobody say that winning a T.T. is not team work. Eleven men lift the Football Cup; eleven men win the "ashes." But the teams which have been labouring for months past to ensure victory in the T.T. embody the massed brains and hands and tools of many a factory, and the little leathered figure which flashes past us with a roar and a dust-cloud is just the physical incarnation of those myriad thinkers and workers—the last man in the relay. As his is the sternest and the hardest task, so his is the main honour, when Fortune smiles.

ROAD RIDER.

At Sulby. D. Young, who finished second in the Lightweight T.T. Race on a 249 c.c. Rex Acme the only machine of this make entered.

# On the Cumbrian Hills with a Side Car

What better fun than an *al-fresco* lunch on the hill-side.

One of the finest mountain panoramas in the Lake district—Langdale Pikes.

## Touring in the Lake District. A Five Days' Itinerary for Medium-powered Passenger Machines.

IT was with great joy that "Passenger" and I accepted an invitation to join an old touring mate on a short visit to the Lake District during the latter part of last year's glorious summer.

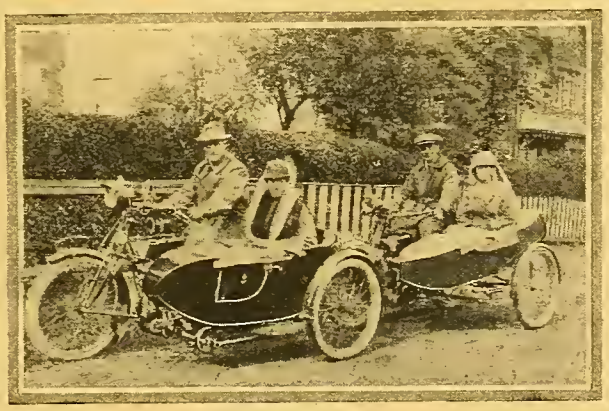
While "Passenger" got ready I busied myself with packing up the camera, a few ground-sheets, and also lowering the gear to obtain a 14-to-1 bottom—low enough for anything, I thought, "up there."

As we desired to make a call on friends at Stockport, two days were occupied in the journey from Birmingham to Blackpool, where my friend lives, leaving there the following morning—he and his passenger on a 4 h.p. Wolf-Jap outfit and we on our 3 h.p. Regal two-stroke ditto.

Our way was via Garstang, Lancaster and Kendal, the ascent leading out of the latter town necessitating a change down to second gear for the first time after leaving Blackpool. With mountain peaks now clearly in view the scenery improved considerably.

### Nearing Windermere.

When nearing Windermere a rather striking notice-board came into view at the top of a hill, telling us to "descend with great caution, or even dismount, as many fatal accidents have occurred," but we reached the Lakeside town without adding to the list of fatalities, and, bearing left, proceeded to Bowness and halted to admire the wonderful scenes all around. Then, slightly retracing, we took the picturesque road by the lake to Ambleside.



The two outfits on which the tour was accomplished, a 4 h.p. Wolf-Jap and a 3 h.p. Regal two-stroke.

Soon after starting for Langdale Pikes next morning the clutch on the Wolf commenced slipping, and on examination we found one of the six bolts broken. This was an "incident" not expected or desired, and being unable to obtain a new one, things had to be taken cautiously.

The eight-mile run up the Langdale Valley is one of wonderful grandeur, with a surprise picture at every turn, and it was difficult to decide what *not* to photograph.

Here we had our first *al-fresco* lunch, and as my friend's equipment included a spirit stove, the meal went down appetisingly, as only such a one should, after which we proceeded as far as we could possibly go—till the "road," in fact, dwindled away through a gate and we found ourselves in a field, out of which Langdale Pikes soared up to 2,401 ft. Yet the return journey to Ambleside was just as enjoyable. This Langdale Valley run should never be missed by tourists.

### Over Dunmail Raise.

Our next halt was in Grasmere, Wordsworth's snug little place, and then up the stiff climb of Dunmail Raise towards Thirlmere, with giant Helvellyn on our right. We got up, but not as well as we wished, for besides my friend's slipping clutch I experienced misfiring for the first time, and to make matters more difficult, rain commenced to fall and a strong wind blew.

**On the Cumbrian Hills with a Sidecar.—**

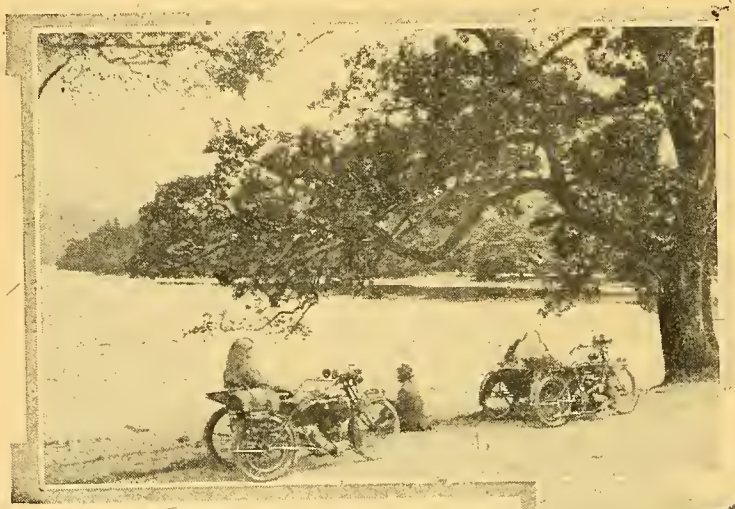
Next morning was spent by Derwentwater and in Borrowdale Valley, where in a quiet spot (except for a billion flies) attention was paid to my magneto, the platinum points of which were found to be very badly worn, and needed very careful handling indeed.

After a lunch we returned to Keswick *via* the west side of the lake—the worst and most dangerous stretch of road we encountered. Our running was certainly better as we proceeded *via* Troutbeck to Ullswater—indisputably the loveliest spot in England; with the glorious tints in the foliage, truly the scenes were bewitching on all sides—and we hadn't a care in the world! Through loitering we were late for tea at Pooley Bridge, at the foot of Ullswater, where we stayed the night.

Next morning was glorious, and the eight miles to Patterdale, by the water's edge practically the whole way, was a very slow run of enchanting delight. Midway we viewed Aira Force; many trippers were doing likewise, and after more photographing we moved on, until another halt by the side of the lake was called for lunch, etc.—this "etc." being a final "go" at my magneto and shortening the belt on the other machine. Then for the big climb!

### A Struggle over Kirkstone.

Starting off in the gayest of spirits, we had not proceeded far beyond Brothers Water when my misfiring became very pronounced, and the Wolf, owing to its heavy load and slipping clutch, struggled on only for a few yards more and then shut off steam. I carried on, but soon had to stop owing to the misfiring, which became more pronounced as the revs. increased. To ease matters our passengers decided to walk; but, not being able to assist one another, our progress was very slow. Having no kick-starter (I've never needed one), it was not easy getting my outfit in motion, and, when I did, the distance travelled was infinitesimal; but by perseverance we "got a move on," and eventually climbed to the "Traveller's Rest" (well-named), a distance of three miles, in two hours, thereby creating the world's "slow-" record! It is some consolation to add that during our progress we witnessed four failures on Kirkstone; they were an 8 h.p. sidecar, a $4\frac{1}{4}$ h.p. ditto, a $3\frac{1}{2}$ h.p. single with a pillion passenger, and a $2\frac{3}{4}$ h.p. light-weight, all engines konking out.



A rest by beautiful Ullswater.

### Mountain Echoes.

We had reward for our labours, however, in the shape of a musical treat from the merry miss at the inn, who sang a succession of selected harmonising notes towards the mountain, the resultant echoes being exquisite sustained chords as if from a choir. Needless to say, we demanded many encores ere we dropped down the four-mile descent to Windermere; and it *was* a drop, requiring exceptionally strong braking at some points, my back brake block being completely worn out in the run down.

After tea a visit was made to Orrest Head, and fortunately we saw one of those gorgeous sunsets of Lakeland, together with the fine panoramic view—this a special item no visitor should miss when at Windermere. There is still something else of further interest on this eminence, but what it is I must leave the tourist to discover.

### Heading South Again.

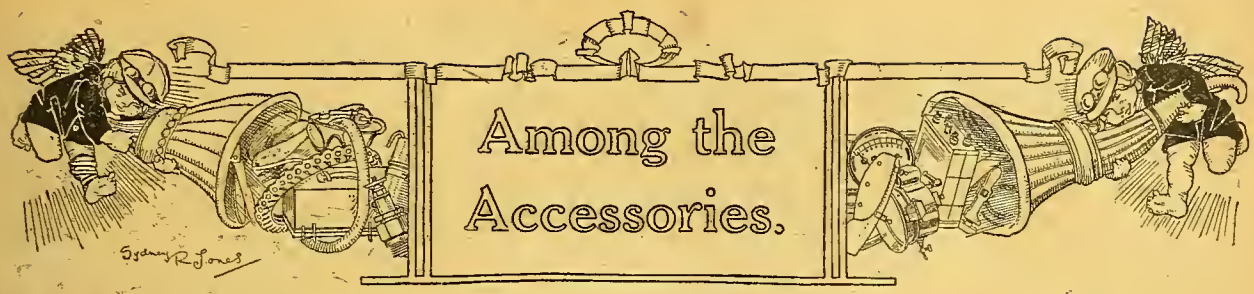
Reluctantly we turned southwards, *via* Lakeside and Grange, where a "lovely" sidecar tyre puncture was mended, followed by our last roadside lunch, after which the route was Lancaster, Garstang, and back to Blackpool.

With new platinum points fitted, together with two carbon brushes at the driving end, all went well on the run back to Birmingham *via* the Peak District of Derbyshire—a route to be recommended.

My total mileage was 620. I used 9 galls. of petrol, averaging 68 m.p.g.—a wee bit low in my opinion, and due to the low gear used; oil 3 pints. The Wolf-Jap used only $7\frac{1}{2}$ galls. of spirit, giving the excellent mileage of 82 per gallon.

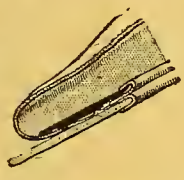
A. A. S.

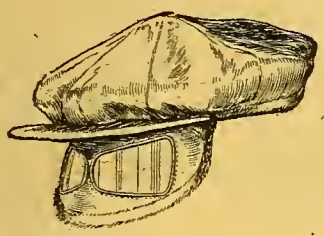
At the summit of Kirkstone Pass. "The Traveller's Rest," one of the highest inns in the country.



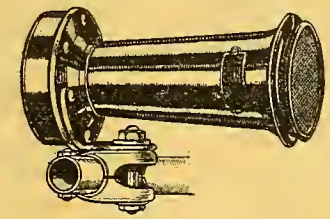
## Disappearing Eye Protectors.

When not in use the eye-protector of the Pidko cap folds flat in the peak. (Norrish & Pidcock, Ltd., 27, Chancery Lane, London, W.C.2.)





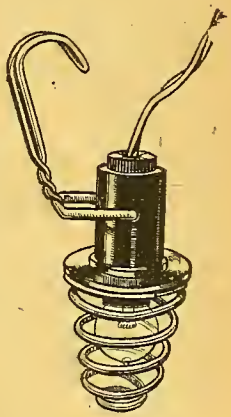
## New Electric Horn.



Of the "trembler" type with only two actual moving parts, the new Clayrite motor cycle electric horn is sold complete with flex and switch at 42/6. (Clayton-Wright, Ltd , Gt. Hampton Street, Birmingham.)

## Neat Inspection Lamp.

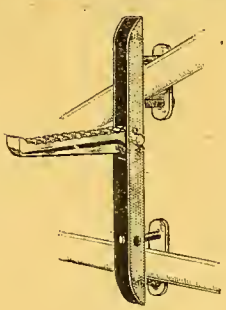
In the compact and well made Hunt Inspection Lamp the bulb is protected by a coil spring. (A. H. Hunt, Ltd., H.A.H. Works, Tunstall Road, East Croydon, Surrey).



## To Cure Hot Plug Troubles.

For two-stroke and other hot-running motor cycle engines, a new K.L.G. plug, the H.S.I., has been introduced. (The Robinhood Engineering Works, Ltd., Putney Vale, London, S.W. 15.)

## Rests for the Pillion Rider.

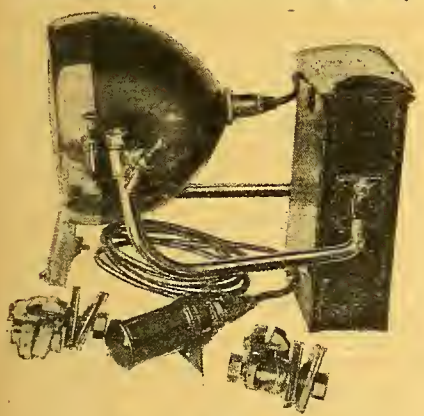


Foot rests for pillion riding have been introduced by Norrish & Pidcock, Ltd., 27, Chancery Lane, London, W.C.2. The step portion, which is adjustable. 12s. 6d. per pair.

## Combined Helmet and Goggles.

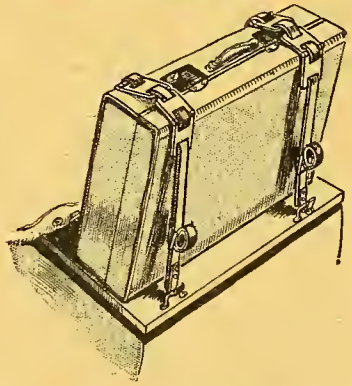
Goggles are incorporated in the peak of the Bednall Helmet, which otherwise follows R.A.F. lines. (H. Bednall, 55, Sutton Crescent, Walsall.)

## Self-contained Electric Lighting.



Carrying a four-volt accumulator of large capacity on the handlebar, the W.T. self-contained lamp, which includes tail-lamp and separate switches, is sold by the Service Co., Ltd., 289, High Holborn, London, W.C.2, at £4 17s. 6d.

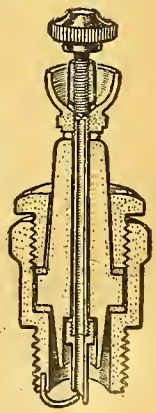
## Secure Luggage Straps.



Four angle pieces through which the straps are threaded, thus acting as pads, form the chief item of originality in the device of Capt. K. H. McCartney (The T.O.M. Co., Ltd., 6, Princes Street, Hanover Square, London, W.1) for securing luggage to a side-car locker lid.

## Sparking Plug and Compression Tap.

Motor cyclists, whose machines are not fitted with compression taps, will be interested in the Parson's combined tap and sparking plug, which has a hollow central electrode and a cup above the insulator; in the central electrode there is screwed a cone pattern valve. The plug is self-cleaning by simply opening the valve. (Quickways, Ltd., 30, City Road, London, E.C.1).



# CLUB NEWS.

### Eccles and District M.C.

The name and address of the acting hon. secretary of this club is now as follows:—Mr. S. Bethel (Jr.), 16, Clarendon Crescent, Eccles.

### Basingstoke M.C.C.

On May 28th an 86-mile reliability trial took place for the Porter Cup and medals over rather difficult country. The Cup was won by F. G. Hedges on a 4-valve Triumph.

### Neath and District M.C.

"Bumper" speed trials in Margam Park are being organised to take place on July 22nd, in conjunction with the Port Talbot *fête* and gala, when the whole of the proceeds are to be devoted to local charities.

### Suez M.C.C.

A club has recently been formed at Suez under the above title, and the first two runs have proved undoubtedly successful. Any communications may be addressed to the hon. sec., Mr. E. M. W. Alexander, at E.T.C. Staff Mess, Suez.

### Birmingham University M.C.C.

On Saturday, May 27th, the club held a gymkhana on the Athletic Grounds, the events including "riding the plank" (slow and fast), "potato race," and acceleration tests, finishing up with a hockey match played on motor cycles, which proved a great success.

### Knock M.C.C. (Belfast).

Neill's Hill was the starting point for a recent paper-chase, the trail being laid by N. P. Metcalfe and W. R. Boyd in a "Stelkite" car and H. McCleery on an Indian. The hounds followed on handicap 20 minutes later. The first to overhaul the car was C. Duffin (2¾ Douglas), followed by A. Bothwell (Norton), Trevor Cather, and S. Bolster (Rudge Multi's).

### Ashford (Kent) M.C., and L.C.C.

Over fifty entries were received for the hill-climb on May 24th at New Barn Hill, Hastingleigh. Although the club has only been in existence for a matter of two months, the membership numbers nearly 100. R. B. Eddleston (3½ Douglas) and Capt. Maund (3 A.B.C.) put up the fastest times, theirs being 53⅗sec. and 53sec. respectively. Miss Burnage (single-speed Levis) also did well. The hill is 1,040 yards long with a nasty hairpin bend in the middle, which renders fast cornering out of the question.

### Aberdeen and District M.C.

The club recently travelled to Potarch to witness a scooter competition on a hill about 150 yards in length, with an average gradient of 1 in 13½. In the ladies' class Mrs. Dawson took first place (32⅘sec.), whilst H. Kitson (28 3-10sec.) was first in the gentlemen's class.

### Stocksbridge and District M.C. and L.C.C.

Twenty competitors entered for the "Padley Cup Trial" on May 20th, the route for which included two circuits at 20 m.p.h. of typical Pennine country. Results:—

(1) Cup and Gold Medal.—W. P. Archer (4¼ B.S.A.); (2) G. Moorhouse (3⅝ Scott); (3) W. Sutton (3½ Rudge-Multi).

### Cheshire Centre A.C.U.

A rally of the clubs in this newly-formed centre is to be held at Knutsford Heath at 2.30 p.m. on June 25th, when the "Blake Cup" will be awarded to the club turning out the most members, multiplied by the number of miles travelled to the "rally"; other prizes will be awarded for individual events.

### Scarborough and District M.C.

About 40 machines were entered for a 37 miles handicap reliability trial, held on May 24th over the country surrounding Scarborough, which had to be completed at an average speed of 20 m.p.h. There were several ties, so that it will be necessary to re-run the event over a similar course to decide the winners.

### Salisbury and District M.C.C.

The first run organised by this new club took the form of an 80-mile reliability test, and was very successful. The route included an observed hill at Alvediston with an average gradient of 1—7. H. Edwards on a 3½ h.p. Sunbeam made a good ascent on top gear. Other good climbs were made by A. R. Hitchings (4 Norton sc.), W. H. Burt (4 Triumph sc.), E. J. Longman (3½ Douglas), and D. B. Ware (3⅝ Scott).

### Kingswood and District M.C. and L.C.C.

A speed hill-climb on May 20th, held at Warren Hill, Dursley, resulted in the following awards:—[350 c.c. class] (1st) C. H. King (2¾ Douglas); (2nd) E. G. Edwards (2¾ Douglas). [Solo unlimited class]: (1st) J. B. Williams (3½ Norton), the fastest time of the day; (2nd) P. E. Hale (3½ Norton); [Sidecar class]: P. E. Hale (3½ Norton sc.).

### Ferryhill and District M.C.

A course of 100 miles was covered in a reliability trial held on May 21st over a route that, without being particularly severe, required skilful driving to maintain a minimum speed of 20 m.p.h. Chas. Jones (4 Triumph) took first place with a loss of 11 marks, whilst E. W. Jones (6-7 B.S.A. sc.) came in a close second, losing 11½ marks. A 7-9 h.p. Harley-Davidson sidecar outfit, driveo by H. Wion, was third with a loss of 12 marks.

### Ipswich and District M.C.C.

A successful hill-climb was carried out by members at Cook's Hill, Mauningtree, recently, when over 100 entries were received for the 17 classes. A. G. Mann did well with his 3½ h.p. Sunbeam, whilst B. A. Katcher (o.h.v. Triumph) and F. K. Portway (Norton) also put in some very good work. A Barr and Stroud was entered and riddeo by A. Blowers, securing third place of the touring motor cycles (class C) with a time of 27sec.

### Bargoed and District M.C.

Results of the hill climb on May 11th, which was open to all clubs affiliated to the East South Wales Centre A.C.U., are now available:—

SOLO (up to 300 c.c.).—1, Luther Davies, Newport (2¼ Diamond-Jap), 54s.

SOLO (up to 350 c.c.).—1, H. Davies, Garnant (2¾ Diamond-Jap), 53⅕s.

SOLO (up to 600 c.c.).—1, L. C. Ramsay, Newport (2¾ Douglas), 53⅕s.; 2, Fred Davies, Tredegar (3½ Sunbeam), 56⅖s.

UNLIMITED SOLO.—1, L. C. Ramsay, Newport (2¾ Douglas), 51⅘s.; 2, Luther Davies, Newport (2¼ Diamond-Jap), 55⅖s.

### Glasgow M.C.C.

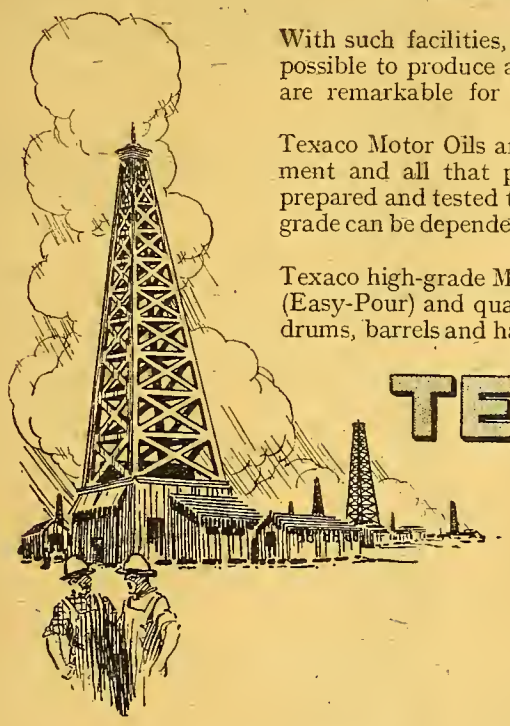
On May 13th the club held an open handicap hill climb on Bowhouse Hill, a recently discovered gradient near Bankerton. There were 19 classes, of which four were abandoned, and in all the entries numbered 108. Electric timing was employed over a half-mile stretch which was perfectly straight with fairly good surface. The best time was 30 seconds, made by two riders—James Beck and E. A. Small—both on 499 c.c. Sunbeams. These riders tied in classes 7 and 10, while Beck also scored in three of the sidecar classes. A. Best, riding a 250 c.c. New Imperial, won classes 1, 5, 6, 8, and 9, while John Deas (A.J.S.) was the winner in three classes. J. Kinney (A.B.C.) and W. M. Henderson (Matchless sc.) were also successful in obtaining firsts.

# OIL EFFICIENCY

**TEXACO PRODUCTS PRODUCED, REFINED AND DISTRIBUTED BY THE TEXACO ORGANISATION**

The equipment of the company responsible for this important development in automobile lubrication consists of :—

5 Refineries.
18 Terminals.
Chemical and Physical Laboratories at all Refineries and Terminals.
A large Fleet of Ocean-going and Coastal Vessels.
Over 4,000 miles of Pipe Line.
Over 5,000 Tank Cars.
Branches, Representatives and Storage facilities in nearly every country of the world.
Shipyard, where Texaco Tank Steamers, Cargo Vessels, Tugs, Barges, Motor Vessels, etc., are built.
2 Research Laboratories.
Barrel, Case and Can Factory.
Staff of over 27,000.



With such facilities, equipment and means of service, it is possible to produce and market a range of motor oils which are remarkable for their high-grade lubricating properties.

Texaco Motor Oils are the embodiment of scientific development and all that practical experience teaches. Specially prepared and tested to meet all automobile requirements, each grade can be depended upon for efficient and economical service.

Texaco high-grade Motor Oils are sold in gallon, half-gallon (Easy-Pour) and quart sealed cans ; 5 and 10 gallon sealed drums, barrels and half-barrels. *Ask your dealer for particulars.*

TEXACO

**The Texaco "Easy-Pour" Can**

The can that enables you to pour into the breather without using a funnel, without gulping or dripping, without waste or oily mess. *The Texaco "Easy-Pour" can costs you no more than the ordinary half-gallon square can.*

*SOLE MARKETERS U.K.:*

**THE TEXAS OIL CO., LTD.**

Imperial House, 15-19, Kingsway, London, W.C.2

Telephone:—GERRARD 6550. Telegrams: "TEXACOIL, LONDON."

# "With no loss of marks"

JUST as the G.N. in open competitions repeatedly gains the highest award, so, year after year, in the Great 365 Days' Trial, in which every private owner takes part, the G.N. comes through without the loss of a single mark.

Every claim is substantiated. Owners are unanimous in paying the highest tribute to the powerful and economical running of the car, its durability, reliability, and, moreover, the service that we give them *after* they buy their cars.

*Send for illustrated catalogue.*

# Your Garage Roof

Does it leak? Does the rusty corrugated iron condense and let drips fall on the coachwork?

Scrap it and cover it yourself with ACE Roofing, and stop all trouble. It's easy to lay—only nails and a hammer are required — it's cheap — only 7/3 per roll of 12 sq. yards—and its extra bitumen coating on both sides makes it wind, water, and weather proof for years.

Think it over and act! It will make a lot of difference at a trivial cost.

*From all Ironmongers.*
Sample and name of nearest agent free from
F. McNEILL & COMPANY, LTD.
4, South Place, Finsbury Sq., E.C.2

**ACE ROOFING**

PETRO FLEX

Follow the lead of the racing "cracks" and have your petrol and oil piping of Petro-Flex, the advantages of copper, but none of the drawbacks. Very light, takes any bend, *really flexible.* Can't break; can't leak. Standard on speed machines; passed by Air Ministry.

# PETRO -FLEX-

State type of carburettor and name of machine, or preferably send us present piping. Send cash with order. Tube and unions come by post within 48 hours.

Prices: up to 6" long, 3/6; to 9", 4/-; to 12", 5/6; to 15", 6/6; to 18", 7/6; to 24", 9/6, post free

## Special Features.

TOURIST TROPHY RACES.
TOURING IN CUMBRIA.
THE LONDON-EDINBURGH RUN.

**The Club Team Championship.**

Entries close on Saturday (the 10th inst.) for the M.C.C. Team Trials for *The Motor Cycle* Cup. The event will take place on the 24th.

**An Official Function.**

The Mayor and Corporation of Douglas entertained A.C.U. officials and the Press to dinner on Wednesday of last week at Collinson's Café, Douglas.

**The Scott Trial.**

Owing to the original day clashing with another important competition, the date of the Scott Trial has been changed to Sept. 16th. This event is regarded by all hardened soloists as the most difficult and sporting "day-out" organised in this country.

**Exiles.**

We understand that a Midland T.T. rider intends to reside in the Isle of Man permanently. It appears that his wife, who crossed with him during the pre-heat-wave storms, refuses to return until the Irish Sea is bridged.

**Winner of Royal Meet Competition.**

Our congratulations to Mr. F. V. Bradley, 25, Birchwood Road, West Byfleet, on winning the 584 c.c. Harley-Davidson motor cycle offered by Mr. Duncan Watson, on the occasion of the Royal Brooklands meeting on the 20th ult. The number of Mr. Bradley's entrance ticket given up at Brooklands was 5782.

**An Inter-'Varsity Hill Climb?**

It has been suggested that an inter-'Varsity hill climb might be held between such Universities as Sheffield, Manchester, Aberystwyth, London, Birmingham, etc., on July 15th this year, the hill to be somewhere in the Midlands. The "Packman Cup" has been promised as a challenge trophy, to be retained by the winning University for one year. The Birmingham M.C.C. is prepared to organise the event this year should the idea be welcomed in University and other circles.

**All Praise to them.**

There are more old crocks in London than in any other city—and they go.

**Thanks.**

Our thanks to the many readers who have written congratulating us on attaining our 1,001st number.

**In Another Transport Sphere.**

Sir Eric Geddes has been elected a member of the Board of the Dunlop Rubber Company, Ltd.

**Hoist with his own ——**

A small boy who filled the exhaust pipe of a hefty single with stones had the surprise of his life. He was bombarded with his own missiles when the rider started up.

**Increase in Swiss Motorists.**

At the present moment there are 27,511 motor vehicles in Switzerland, while in 1920 there were only 20,409. Probably when the number of cars in German Switzerland increases the motor tourist will receive a little greater consideration at the hands of the authorities.

**"The Motor Cycle" *v.* Time.**

Those of our readers who, on reading in the Isle of Man on Wednesday *The Motor Cycle* report of Tuesday's Junior race, little realise that the members of the staff responsible—both in the island and in London—held a kind of T.T. race of their own: *The Motor Cycle versus* time.

**Motor Vehicles Prohibited.**

The Duke of Portland and Earl Manvers have decided to open respectively Welbeck Park and Thoresby Park, in the Dukeries, to the general public forthwith, but the concession so far as vehicles are concerned, is limited to those which are horse-drawn. All motor vehicles, which incidentally convey the majority of visitors to the Dukeries, are barred.

**A Surprise Win.**

The win of a two-stroke in the lightweight race was a surprise to everyone.

**Speed.**

It takes longer for a telegram to come from the Isle of Man on T.T. days than it does for Bennett to cover the 226 miles of the course.

**A Popular Winner.**

T. M. Sheard is the first Manxman to win a T.T. race. Naturally he was a greater hero than any previous winner of the coveted trophy.

**"The Motor-Cycle" Lap Bulletins.**

As usual, thousands of the public interested in the T.T. races gathered before *The Motor Cycle* telegram boards which were displayed all over the country.

**Pocket Leviathans.**

The smallest engine entered for the London-Edinburgh run, described elsewhere in this issue, was the 169 c.c. J.E.S. which incidentally is just over two-thirds as large as Geoffrey Davison's wonderful Levis.

**Pioneers.**

Judging by the number of veterans who commenced their motor cycling career on a Werner front-driven machine, the output of this ancient mount must have been very high indeed. Perhaps they changed hands frequently.

**Motor Cycle Club Assists Police.**

The excellent condition of the roads on Dundham Downs has proved so great and irresistible a temptation to young and thoughtless "speed merchants," that the local police have been stung into a vigorous offensive, which has resulted in a number of prosecutions. The Bristol M.C. and L.C.C. has offered to support the police in suppressing this nuisance, and has threatened to remove from its books the name of any member convicted for this offence.

# LAP SCORES OF THE 1922 TOURIST TROPHY RACES.

Individual Lap times and Total times of all Survivors in the three races. Lap times of all the Starters.

## SENIOR T.T. RACE.

Distance, 226·5 Miles (6 laps of 37·75 miles). 67 starters; 22 survivors.

# The London-Edinburgh Run

At Hendon last Friday evening. This year the start took place in much less picturesque surroundings, and public interest was naturally less pronounced than when the competitors were dispatched from Ye Olde Gate House at Highgate.

## Out of 245 Starters in the M.C.C. Classic Whitsuntide Event, 219 Complete the Journey

IT hardly seems natural to start the London-Edinburgh run from Hendon, which is not—and does not want to be—London. Gone is the old glamour of starting from Highgate in that fine wide open space thronged with people beyond the Gate-House Inn. This year the fates and the Metropolitan police ruled otherwise, and the start, on Friday night last, took place in the open country outside the premises of the London Country Club, the hospitality of which, extended to members and officials, was highly appreciated. Unfortunately, the space wherein the competing vehicles were marshalled was somewhat restricted.

Two people started exceedingly late and did not sign the checkers' sheet: Stannah (499 Rover) left well over half an hour after his schedule time, owing to a garage refill of petrol and water, while Heller (293 Calthorpe) omitted to sign the sheet and started 20m. late.

### Lighting Equipment.

Acetylene lighting held its own. Dissolved acetylene cylinders were used in a number of cases, and, as on the Exeter and Land's End runs, Rhode's Triumph was illuminated by means of two Lucas King of the Road headlights placed side by side.

Boorer (678 N.U.T.) had wrapped his route card round a roller and covered it with celluloid. This roller was mounted on brackets and so placed that it could be rotated so as to show the route at every stage throughout the journey merely by turning it the required amount. Browning (349 A.J.S.) had rigged up an ingenious home-made arrangement, consisting of a case with a glass top through which a home-made route card, mounted on rollers, could be seen, and turned as required by wing nuts on the outside.

Fellowes competed as usual on the De Dion, the engine of which is slightly older than he is; its 1922 improvements consist of a new T.B. magneto and new piston rings.

We noticed a new o.h.v. flat twin Brough with a short wheelbase frame, saddle tank, and unit engine and gear box, which was being piloted by F. W. Stevenson. The new Hagg tandems were fitted with Barr and Stroud single sleeve-valve engines and ran very quietly. Hugh Gibson (Raleigh) was amongst those who had returned from the Isle of Man in time to take part in the event, and H. Glendinning turned out on one of the new 976 c.c. J.A.P. engined Zeniths, with three-speed gear and all-chain drive.

The inseparable friends, Jacobs and Le Grand, now united after the war, were riding identical Rex-Acme sidecar outfits, both fitted with Wattalite generators and both equipped with Belgrave tyres, a new make of cover hailing from Wembley. The two P. and M. sidecar outfits, ridden by Townsend and Lewis, embodied new types of sidecar bodies; the former's was of the semi-sporting type, with a scuttle which hinged sideways, and the latter's was built of three-ply cedarwood.

The first three-wheeler driver, Spouse (T.B.), started with a vase on the dashboard filled with white narcissi, but Biggs (Coventry-Premier three-wheeler) went further than this, leaving for Edinburgh with three up.

There were only eight non-starters among the solo riders. There was a fair crowd of spectators, not particularly well marshalled, for only one policeman was on duty, but, on the whole, the competitors had little difficulty in getting away, the later starters learning that the best way to get through the throng was to make a good deal of noise and to speed up, when a clear passage was quickly made. Among the 110 sidecars there were only six absentees, and only two three-wheelers did not line up for the start.

From Hendon to Barnet the roads were quite good and adequately marshalled.

**The London-Edinburgh Run.—**

### Rain for a Moment.

Heavy rain fell in the neighbourhood of Barnet.

After the stifling heat of the preceding day the evening's run was pleasant, and the well-tarred roads prevented dust from becoming a serious trouble, though the later competitors complained slightly on this score. By four o'clock in the morning the weather had become chilly, and passing through the Trent Valley it was bitterly cold.

G. Packman (P. and P.) was late at Grantham, having broken his petrol pipe, but he subsequently made up time. Near Grantham, also, C. C. Labin (678 Martinsyde) experienced a mysterious fire, but fortunately neither he nor his machine were seriously damaged, and he was able to continue. Muskham Bridge, north of Newark, is in the process of being widened, and to prevent competitors driving over the edge and into the Trent observers had been posted to give due warning.

### Doncaster and a Sleepy Checker.

Just short of Doncaster G. E. Cuffe (269 Metro-Tyler) broke a magneto chain, but by a stroke of luck he had a spare chain with him, and was under way again in a few minutes. R. N. Thomas (348 Hagg tandem) experienced continuous lamp trouble, and used a hand torch for a considerable distance. Fortunately, however, the period of darkness was short, and even the earliest numbers were able to extinguish their lamps at Doncaster. At this point the official checker was late, and the men were not required to sign on.

With a chill head wind but a bright morning the competitors made for the breakfast stop at Ilkley, and experienced poor road surfaces for the first time for a stretch before that town. At the Middleton Hotel, Ilkley, all the arrangements for the riders' comfort had been admirably carried out, and the sporting proprietor had himself superintended the lighting of the kitchen fires at 3 a.m. The men arrived in good order, and machines were parked in the hotel drive, where petrol and oil were obtainable. J. G. Haun (876 New Imperial) had the misfortune to run out of petrol within sight of the check, and since he walked into the control without his machine he was behind time. Had he pushed his machine in he would have saved his gold medal.

By 7.30 the first men were once again ready to continue their long run northwards, and good roads were the order of the day. Not a few took things easy, and near Skipton we passed an Ariel team resting by the roadside, while George Brough was sitting on a sunny wall discussing matters with a friend. Just beyond Settle a number of local enthusiasts had gathered at the summit of a long upward grade (Buckhaw Brow), but it was a top gear climb for most machines.

In Kirkby Lonsdale competitors were diverted from the main road and passed on to Kendal via Old Hutton, an excellent road, though rather dusty in places; thence onwards to Windermere and Ambleside, and so to the long steep ascent of Kirkstone Pass.

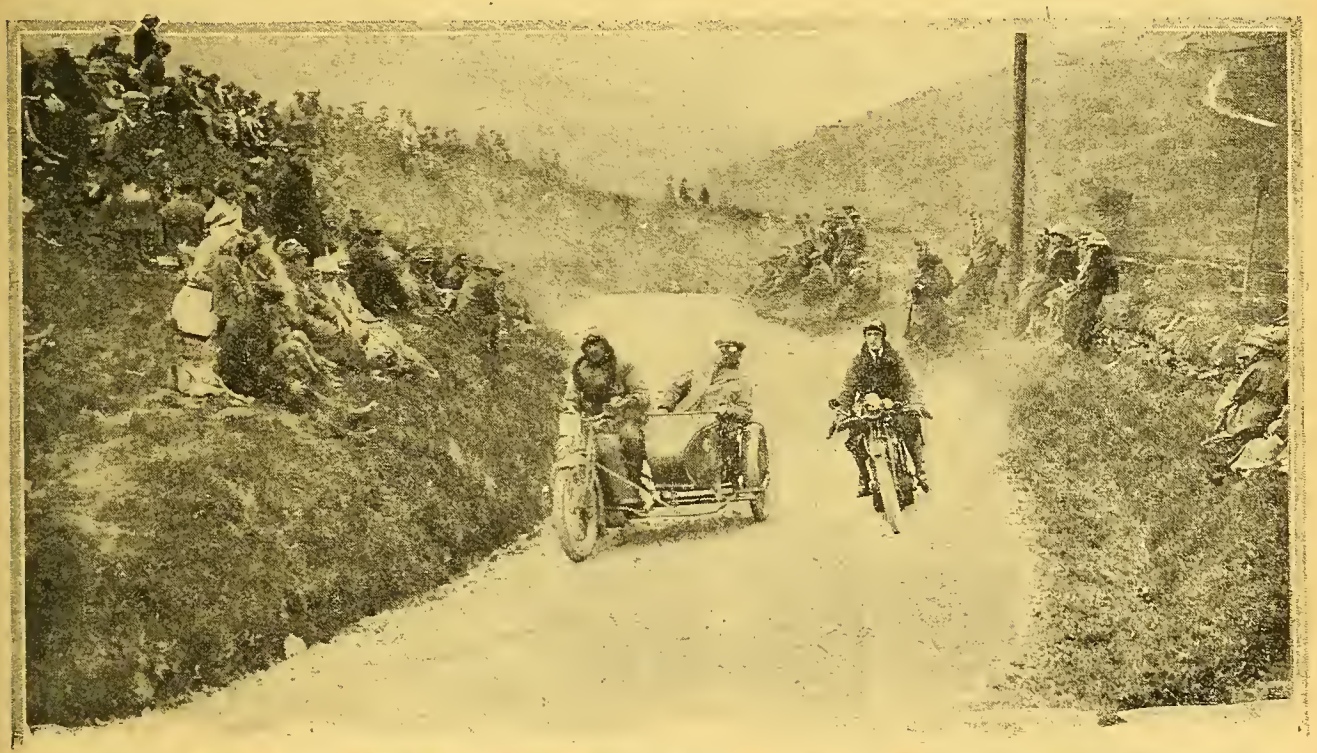
### Kirkstone.

Perhaps the steepest pitch of this climb occurs on leaving Ambleside village, but thereafter there is a long engine-heating pull of about a mile, then an easy stretch including a slight descent, and, finally, after two sharpish corners, a long grind of nearly 1 in 4, known as "the struggle," the summit being 1,476 feet above sea level. With so huge an entry it is impossible to mention each individual performance, especially as the hill is no more than a middle gear climb for many 350 c.c. machines, but some outstanding performances are worthy of note.

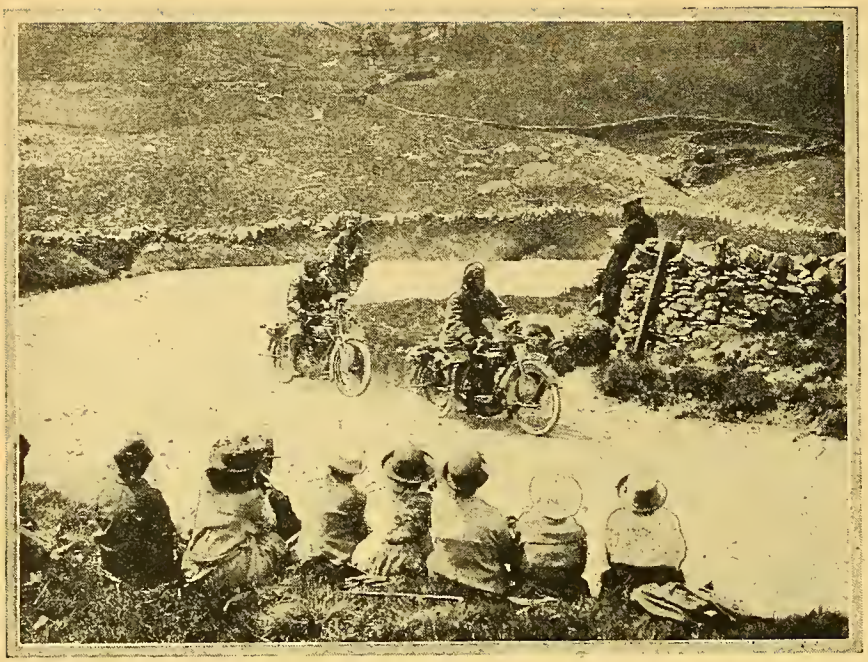
### Among the Early Arrivals.

Amongst the early arrivals, G. Brough (Brough Superior), C. Wheeler (Scott), H. Deacon (Norton), W. Brandon (o.h.v. Triumph), and R. Lane (Brough) made fine climbs of the upper stretch; G. Cuffe (Metro-Tyler) was slow, and was passed by A. C. Rhodes (o.h.v. Triumph). G. Lanford (O.K. Junior) found the long grade too much for his engine. Hugh Gibson (Raleigh) toured up with his hand on his hip, and C. Labin (Martinsyde), H. Lane (Levis), V. Belfield (o.h.v. Triumph), A. Symes, and E. Gifford, on Martinsydes, made splendid ascents.

Next came R. Purnell on his little J.E.S., the tiny engine purring up the steep grade and running well within its power. This was quite one of the most noticeable performances of the day. R. Reid (Scott), A. Wall (A.B.C.), O. Collier (Sunbeam), T. Harman (Coulson), and H. Nias (Ariel), came up fast, while G. Wray (Triumph), F. Townshend (Zenith-Bradshaw), S. Warne (Precision



On the worst portion of Kirkstone Pass, as will be gathered from the crowd. W. H. Hardman (993 c.c. Matchless sidecar) and a non-competitor.



Judging by their nonchalant riding attitude, the hairpin on Kirkstone gave this trio no trouble whatever. J. and A. Stanger (538 c.c. Stangers), followed by L. E. Chirney (348 c.c. Beardmore-Precision).

Barr and Stroud), H. Glendinning (Zenith), and T. Buckle (F.N.) were noticeably quiet. H. Sutton (211 Enfield) failed; F. Parsons (Ner-a-Car) stopped momentarily, and his team mate, N. Runnels-Moss, just got up by a piece of clever driving, a good performance for a machine which is not designed for "stunt" hill climbs.

C. Bartlett (Omega) ran beside his mount, and A. Stanger (Stanger) and E. Clark, Jun. (Douglas) made clean ascents, though their engines were misfiring. The next batch of fast climbs was made by E. Eland (B.S.A.), W. Wells (A.B.C), A. Guthrie (Diamond B. and S.), T. Grose (A.B.C.), and R. Charlesworth (Zenith-Bradshaw). L. Cashmore (Alecto), ran, as did D. Stone (Orbit), while F. Whitfield on an old pattern Rudge-Multi found his machine to be too highly geared, and stopped. B. Fellowes, on the veteran De Dion, made a clean climb with not too much in hand.

Not until the sidecars arrived was there any serious baulking, but L. Arnold (Matchless sc.) failed and baulked W. Sweet (Harley-Davidson sc.), who failed after scraping round Arnold's stationary outfit. On the whole, the many Matchless riders put up very fine performances, being quiet as well as fast.

Three of the four Henderson four-cylinder outfits went up very fast, but J. Cheyney, on a 10 h.p. model, failed badly and baulked an early three-wheeler. Perhaps the best performance in the sidecar class was that of H. Gold on a 348 c.c. Francis-Barnett, though C. Sprosen (370 Connaught sc.) made a fine, steady climb.

There appeared to be no reason for the passenger of W. Chase's Dunelt to perform acrobatics, as the outfit went up well. E. Bridgeman made a fine climb on his Indian Chief, as did all the P. and M. outfits, and Clifford Wilson (Quadrant sc.) and the Brough Superiors climbed well, S. Tait having a windscreen which he preferred to look round. Of the remainder the following were noticeable: P. Platt (Bradbury sc.), P. Peterson (Dunelt sc.), W. H. Bashall (Martinsyde sc.), W. King and J. A. Masters (Harley-Davidson sc.), Frank Smith (Clyno sc.), and L. Peaty (550 Hawker sc.).

### Failures.

The following failed or ran: J. Bradbury (Triumph sc.), R. Andrews (557 B.S.A. sc.), A. Graham (Matchless sc.), T. Ryan (Rudge sc.), A. Conville (Lea-Francis sc.), I. Brettell (370 Connaught), and F. Douglass (Bradbury), who appeared to be in trouble with his change-speed Quadrant.

Of the three-wheeled runabouts S. McCarthy, R. Duke-Williams, H. Beart, S. Hall, A. Maskell, and W. Pattison on Morgans all made first-class climbs, and D. Rhodes (Scott Sociable) made a wonderful ascent for so small an engine. F. Spouse (T.B.) and J. Meredith (T.B.) performed well, and C. Hollyoak piloted a newcomer named the Federation.

### Toward the Border.

After crossing Kirkstone there followed a picturesque drop into Patterdale requiring care, and thereafter delightful Lakeland scenery was enjoyed until the outskirts of Carlisle were reached. Here in the open space outside the County Hotel competing machines were marshalled in most orderly form, the foremost machines in the ranks being despatched after the luncheon interval, while the latest arrivals lined up at the tail end of the long procession. Lunch at 4 p.m. was a new experience for many of the cycle car drivers!

Here we learned that Pattison (Morgan) had been delayed by a broken water connection, Vidler (Triumph) had seized his engine near Otley, and Farmer (Zenith-Bradshaw) had collided with a competing sidecar and suffered injuries.

McGinnell had lost the petrol filler cap

Martinsydes of varying capacity on the hairpin. A. A. Symes, riding a 678 c.c. model, and E. H. Gifford on a mount of 496 c.c. capacity.

**The London-Edinburgh Run.—**

of his Triumph, and had stuffed his now sodden handkerchief into the orifice. A better plan would have been to transfer the oil cap and cover the oil tank, since lubricant does not plop out as petrol does. Cranford (P.V.) suffered a broken sidecar spindle and then transferred as passenger to his brother's Matchless.

On to Gretna Green, one observed that the enterprising A.A. had erected a yellow banner over the border bridge "The A.A. Welcomes the M.C.C." Regular running was the order over magnificently surfaced tarmac roads, undulating but slightly. Ontside Carlisle, Eli Clark, Jun., had to stop to clean the jet; one or two others suffered a similar experience, but mostly when groups were overtaken they were chatting or smoking cigarettes, trouble being rare.

Tea was arranged at Moffat, where the usual crowd had collected. Small boys found amusement in collecting the empty oil tins, and had a fine array with useful dregs for their bicycles and scooters. A magnificent climb over the mountains followed after Moffat.

**Emergency Dyeing Arrangements.**

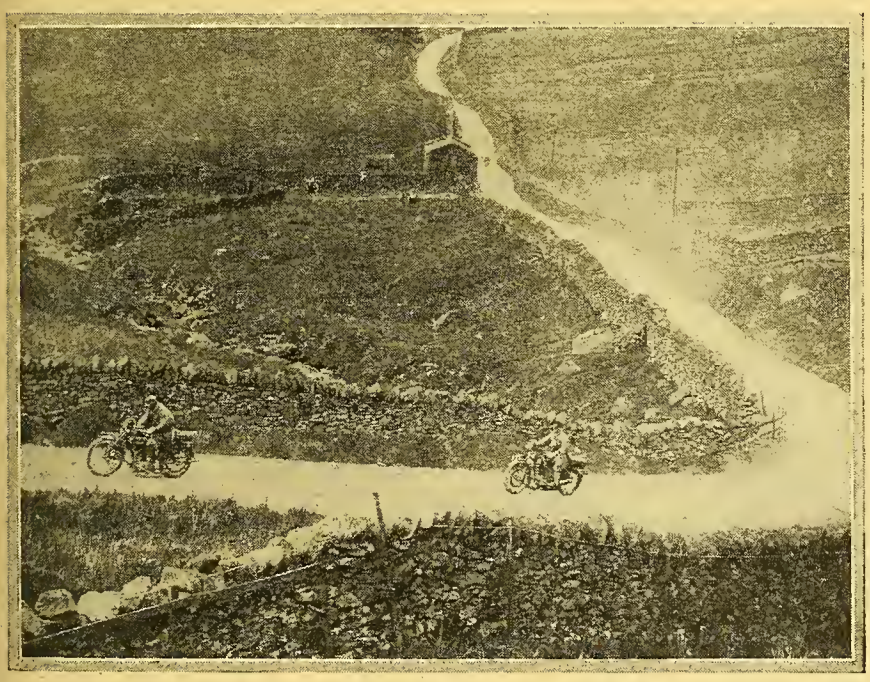
There was no risk of losing the way; apart from well placed arrows checked by G. Pettyt, W. H. Wells, the captain, made sure of things by carrying small sweet bags full of blue dye which, thrown heavily on the ground, produced a first rate line denoting the route.

Hereabouts we spoke to Frank Smith, who, driving a Clyno sidecar, had J. Cocker (formerly of Singers and Triumphs) in the sidecar as passenger. This connection may form the subject of an interesting announcement in the near future.

Near Crook Inn, White (Sunbeam) was passed by the roadside with his front chain case off. Through Liberton to Edinburgh crowds lined the route, a large number of owners of cars and motor cycles of all descriptions having motored out of the city for some miles to meet the dusty and tired riders.

As was the case in the 1920 London-Edinburgh run, when Kirkstone Pass was included, a big crowd gathered at the summit to watch and criticise the competitors. R. L. Richardson (345 c.c. Alecto) followed by P. A. Hopkins (348 c.c. Ivy).

Most complained of smarting eyes, some going so far as to carry eye lotion in order to bathe their eye at the controls. Notwithstanding, a magnificent and enjoyable run was the general verdict, and from a large percentage which succeeded, some were asking if the M.C.C. would willingly dole out so many gold medals, or whether they would make the event much stiffer next year—something to compare with the Eastertide London-Land's End Trial.



A slight idea of the long climb up Kirkstone is conveyed by this photograph taken at an elevation, showing G. Wray (499 c.c. Triumph) and J. J. Sykes (596 c.c. Sunbeam) making an effortless climb.

---

# IRISH RELIABILITY TRIALS.

THE Dunlop Cup reliability trial of the Dublin and District Club on the 27th ult. was won by T. E. Greene (496 Douglas), whose margin of error at the secret checks was less than any of the other riders who completed the course with full marks. The sidecar prize was won by J. Healy (598 James), and the team prize by Allen, Hill and Hurse. Gold medals were won by twenty-five of the finishers—an expensive result for the club treasury.

The Whitsuntide trial of the Dublin and District Club took the form of a novices' trial, most of the club experts being engaged in the open event of the Cork Club. Major Waters got together a very good entry, and over forty riders took part in the event. With good weather and easy conditions most of them completed the course.

# 50 Mile Race on the Sands

## Welsh Speed Championships. A Contest on the Beach at Pendine.

ON Whit-Monday Pendine Sands was once again the scene of successful motor cycle racing in connection with the Welsh speed championships of the Carmarthen and District Motor Cycle and Cycle Car Club. The racing commenced punctually at 10.30 a.m., and a very large crowd of spectators had assembled to witness this popular event. Several of the competitors had been staying at Pendine over the week-end, getting in fettle for the day, and some very close racing was the result.

### Machines Prove Staying Power.

A marked improvement in the staying powers of machines was noticed this year over preceding years, very few competitors falling out through mechanical breakdowns. In the 2½ miles sprint for unlimited machines, a nasty accident befell J. P. Board of Bridgend, who had a miraculous escape, his machine, a Norton, being very seriously damaged.

### Prominent Welsh Speedmen.

The entries included the cream of South Wales riders, among others being J. Thomas (Neath), mounted on his I.O.M. Sheffield Henderson, which made such a good performance in the Junior T.T., Dr. Lindsay on his Norton, Sgonina on his "Sgonina Special," and an A.J.S., the brothers Bush, and brothers Davies, Morris Isaacs, Wm. Edwards, etc.

Morris Isaacs (Carmarthen) did exceedingly well on his New Imperial, and was the winner by a comfortable margin of the 25 mile Welsh championship for machines up to 275 c.c.

### Long Distance Races.

The 25 miles championship for machines up to 350 c.c. was won by L. Davies (Newport) on a o.h.v. Cotton-Blackburn; although Sgonina would have been an easy winner had his machine (Sgonina Special) not been quite so new, he had to fall out in the last lap. The second man home was Jack Thomas (Neath) on his Sheffield Henderson, who ran practically neck and neck with L. Davies.

Great excitement prevailed, and the mounted police were kept busy at the start of the 50 mile Welsh championship for solo machines (unlimited c.c.), there being a considerable entry for this event.

The winner, F. Bush (Harley-Davidson), led from the start, maintaining this position throughout, finally winning by over a mile. Dr. Lindsay (Norton), after a tussle with H. Davies (Brough Superior), secured second position, the last mentioned rider coming in third. The results are as follow:

2½ MILE SPRINT FOR SOLOS UP TO 350 C.C.
1. C. Sgonina, Cardiff (A.J.S.).
2. J. Thomas, Neath (Sheffield-Henderson).
3. Luther Davies, Newport (Cotton Blackburn).

2½-MILE SPRINT, UNLIMITED C.C..
1. F. P. Bush, Neath (Harley-Davidson).
2. Dr. A. Lindsay, Neath (Norton).
3. C. Sgonina, Cardiff (S. Special).

25-MILE CHAMPIONSHIP UP TO 275 C.C
1. Morris Isaac, Carmarthen (New Imperial).

25-MILE CHAMPIONSHIP UP TO 350 C.C.
1. L. Davies, Newport (Cotton).
2. J. Thomas, Neath (Sheffield-Henderson).
3. T. G. Thomas, Carmarthen (Sheffield-Henderson).

50-MILE WELSH CHAMPIONSHIP, UNLIMITED C.C.
1. F. P. Bush, Neath (Harley-Davidson).
2. Dr. Lindsay, Neath (Norton).
3. H. Davies, Garnant (Brough Superior).

THE NEXT STAGE!

*MOTOR CYCLISTS interested in small or large cars should read*

The Autocar

Every Friday 4d.

*the forerunner of all motoring journals. Founded in 1895, it remains the largest and most successful automobile paper, and enjoys the greatest circulation. It is universally accepted as the representative British motoring journal.*

## T.T. ECHOES.

The Lucas Electrical Co. is to be congratulated on producing a twin two-spark magneto which withstood the searching test of the T.T. on the Scott machines. It is probably the first time that such an instrument has stood up successfully to such a gruelling, and this reflects pleasantly on the state of the British magneto industry.

* * *

It is rumoured that a well-known designer of an o.h.v. single lapped the course in 60 min. with a sidecar attached, afterwards remarking that he was *driving carefully*, as he did not wish to make the passenger (his father) nervous. With all due respect to the undoubted prowess of the driver, we are prepared to confess that had we been in the sidecar we might have felt the breeze.

# SIR EDWARD M. ILIFFE.

WE regard it as an honour to the technical Press in general and to *The Motor Cycle*, *The Autocar*, and sister journals in particular, that the list of His Majesty's Birthday Honours includes the name of Edward M. Iliffe, who is invested with a knighthood.

Sir Edward is joint proprietor with his brother—Mr. W. Coker Iliffe—of the firm of Iliffe and Sons, Ltd., owners and publishers of our sister journal, *The Autocar*, and the large group of technical and lay journals known to many as The Iliffe Press.

Naturally we are proud of the honour bestowed upon our director, especially since we know how deserved is the distinction.

During the war Sir Edward joined the Ministry of Munitions, of the machine tools department of which he subsequently became controller. After the Armistice he was appointed liquidator of machine tool and small tool contracts. Early in 1918 he received a C.B.E., and the following year he became an officer of the Legion of Honour.

In the Birthday Honours List.—Sir Edward M. Iliffe.

Sir Edward Iliffe is a Justice of the Peace for Warwickshire; President of the Coventry Chamber of Commerce and a member of the Association of British Chambers of Commerce; and President of the British Association of Trade and Technical Journals.

### A Pioneer Motorist.

An enthusiastic motorist since the earliest days—when he drove an Enfield Quad in the historic Thousand Miles Trial of 1895—Sir Edward is also a skilled tennis player, and frequently plays for Warwickshire County.

In extending our congratulations, we feel that we are writing on behalf of a large number of our readers, many of whom have at some time or another come in contact with the personality chiefly responsible for our success.

# ENJOYABLE LONDON RALLY.

LAST year somewhat inclement weather spoilt the North London M.C.C. Rally at Hendon; this year it was almost too hot. Nevertheless, the attendance at the aerodrome on Whit-Monday was quite good, although, considered in relation to the number of motor cyclists in London and the Home Counties, it was very disappointing.

### A Longer Run Wanted.

Perhaps Hendon is too near the Metropolis for the average motor cyclist who is a great traveller and ignores distance, especially when favoured by a long week-end like Whitsuntide.

This theory is confirmed by the fact that the Wakefield and District M.C. and L.C.C. easily won the Challenge Shield presented by Mr. A. J. F. Beaurain for the club travelling furthest to the meet, the mileage figure, of course, being multiplied by the number of members present. Wakefield gained 2,958 points, and the Connaught M.C.C., with a score of 2,478, was second, gaining the Triumph Challenge Cup (presented by the Triumph Cycle Co.).

Gymkhana events occupied the afternoon and evening, but neither the tent-pegging nor the apple bobbing, nor even the bun-eating competition was half so amusing as the remark of one of those present as he toured into the grounds on an ancient, certainly pre-war, twin in an advanced stage of decrepitude. "I wonder," quoth he, to his friend, "if I can have a blind here. *I'm doing seventy-five just now!*"

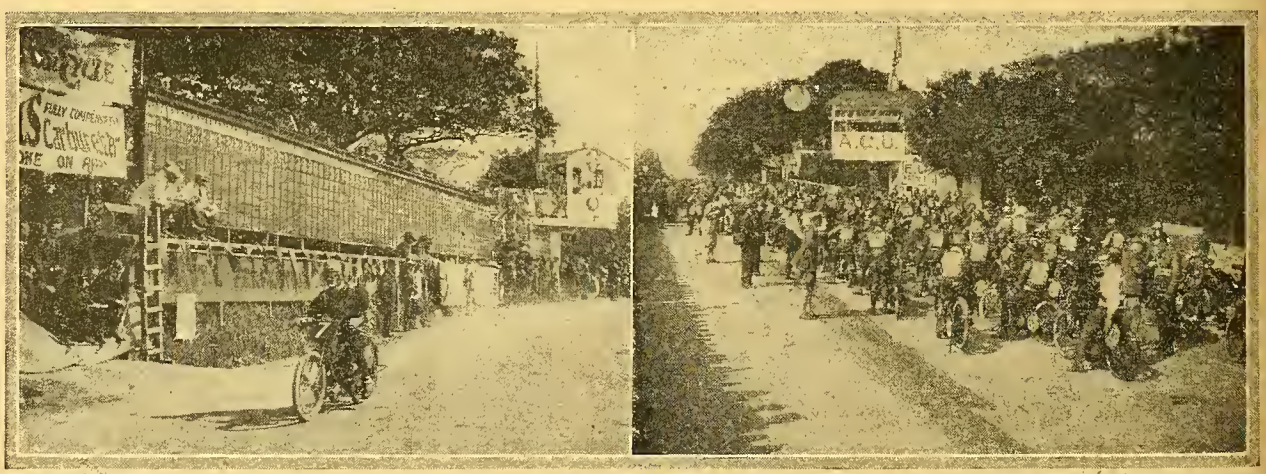
What struck the North Country visitors most was the number of old crocks present; but our representative was even more impressed by the popularity of Rudge-Multis and Connaughts. They were as numerous as insects on the unmown grass.

### A Surprised Prize Winner.

The usual competition for the most ingenious "gadget" provided an unusual *dénouement*; it was won by J. Dennis for a nail and copper wire repair to his gear box effected as a first aid measure to his Royal Ruby on his way to the rally—a case of turning misfortune to good account if ever there was!

An exhibition of "new models and unconventional makes" was better supported on the programme than in the grounds; and the ice-cream stall, generally, attracted greater crowds.

Two hire aeroplanes, there by special arrangement, were seldom allowed to remain long out of the air, and generally speaking there was always something happening until the approach of dusk broke the meeting up.



THE LIGHTWEIGHT AND JUNIOR T.T. RACES.

H. Petty (249 c.c. Diamond) accelerating at the start. Competitors awaiting their turn for the word to go.

### *WHERE TO TOUR.*

Sir,—Having myself often been in doubt as to where to take my summer holiday, I presume that some of your other readers may have been so too. May I be allowed to suggest to these people that they should visit North Wales? There are numerous attractions about the place for the motor cyclist on tour; seaside towns with plenty of amusements and good accommodation, inland rides amidst gorgeous mountain scenery, and excellent roads with plenty of hill climbing, are but a few. SUMMER CYCLIST.

Epsom.

### *AN AMATEUR ASSOCIATION.*

Sir,—Although I think the A.C.U. has made rather a mistake in stopping the amateur race altogether, I do think there is something to be said for the objection that such a race held in between the Junior and Senior T.T. would, to quite a considerable extent, deteriorate their value. If this race became an annual one (held in between the Junior and Senior T.T.), I am sure the public would soon begin to take more interest in it than the trade event, in which case the most important motor cycling event of the year would lose its significance. Also, makers are not going to spend all the money and trouble necessary for competing in the T.T. if it is not spent to some good purpose.

Why not, therefore, have an Amateur Race, but hold it as far apart from the usual T.T. as possible, when the two events would not clash. D. GOODMAN.

Sir,—Messrs. J. M. Philpott's and J. V. Brook's letters have interested—and amused—me not a little; they have not, I am afraid, instructed me much.

Mr. Philpott, whom I know as a thorough good sportsman, misses the point of the matter altogether. He speaks entirely in terms of reliability trials, where, as he says, the amateur stands in just as favourable a position as the trade man. In speed events—road, track, or I.O.M.—he, I am sure, will agree the average amateur, however much he "pays attention to every small detail," is setting himself a hopeless task in attempting to compete against riders of special factory machines.

The second letter is mainly a very stereotyped crede of the A.C.U., as it is supposed to be, but Mr. Brook makes one interesting confession. The biggest stumbling block in the way of the proposed Amateur Race was the difficulty of defining an amateur. Now, in the first place, I understood that the Manx M.C.C. had prepared some very excellent rulings on this matter. Were they considered, or ignored? Secondly, if the A.C.U. cannot define an amateur, surely it is time that we had some organisation which could.

In conclusion, Mr. Philpott mentions "anonymous grousers." I am afraid I must retain my anonymity, for reasons quite unconnected with any desire to "carry off pots," but the Editor can vouch for the fact that I have no axe to grind. R.I.C. UMPH.

W.C.2.

### *TEMPERAMENTAL ENGINES.*

Sir,—My machine would carry on at 15 to 20 m.p.h. with very little gas, and suddenly, without warning, would tear away "all out." Thinking the carburetter to be at fault, I fitted a different type, but the mysterious madness was not cured. On dismantling the engine, however, I found that the exhaust rocker had worked loose on its bearing, and was running partly on the *inlet* cam, thus producing a "decompressor" effect. The fitting of new rockers and cams cured the mania, and the machine now gives such service as one would expect from a Rudge Multi. Usual disclaimer. THREE PLY.

Birmingham.

Sir,—I am very sorry to see that no one has come forward with any possible explanation. I do not think the rarified atmosphere referred to by "Multi" can be held responsible. I can assure any experts who may be interested that this is a real problem, to which there must be one definite solution. Surely it is not going to get the better of us? I fear my case must be the worst, or else the others would demand a further explanation. I may say I have further experimented since my letter in your issue of May 4th, and have definitely ruled out the cause put forward by most people to whom I have mentioned the trouble, *i.e.*, the magneto. This may be taken for granted. I suggest that "Ixion" peruses carefully all the instances, and comes to a conclusion—the right one—without delay! Thereby his reputation will be further enhanced. I can assure him I do not go on any lofty tablelands, nor does my compression vary—as far as I know. R. S. A. BOOTE.

### *STEREOTYPING THE RELIABILITY TRIAL.*

Sir,—In your last issue Major Vernon Brook replied in very friendly spirit to some criticism I had ventured to make upon his resolution that a representative of the Competition Committee should in future inspect the courses got out by the centres for the purposes of open competitions. One can always feel sure that his suggestions are ever prompted by a very keen desire to forward whatsoever shall be in the best interests of motor cycling, and I, therefore, trust that he may deem worthy of consideration the following comments upon the reasons he gives for his proposal:

(1) Major Brook puts as his first reason that the union is responsible for the proper conduct of such events. Personally, I consider the various centres as the component parts of the Union, and as such some confidence should be placed

in their experience and their discretion. After all, the inspector representative from the Competitions Committee would generally be a prominent centre official—though he might come with his instructions.

(2) Trials results on courses of such a nature that the secret check has to be resorted to in order to find a winner are much more of "a farce" than those issued from "the lively course." I am told by a prominent trials rider that in a recent open event performances of equal merit were made on the course and declared time checks by a very large number. The secret check was consulted, and whilst one receives the premier award, another through a four or five minutes' error of judgment receives a "bronze." I can imagine nothing more galling than this to the manufacturer.

(3) It is not my experience that the genuine amateur does not enter the so-called "freak trial." This centre last season ran an event over the same course as that upon which there has been so much controversy of late, and secured nearly a hundred amateur local entries, and no grumblers. The reason open trials fail to attract the amateur is, first of all, because there are very few of the genuine type who can get away from business for the day (open events cannot be run on Sunday), and secondly on account of the high entrance fees necessitated by the gold medal tradition.

(4) Respecting the value to the trade, I dealt with this matter in my previous letter. It seems to me quite unnecessary that any warning should be issued regarding the nature of the tests. To give opportunity of fitting any special equipment would detract considerably from the value of the trial. The courses are as a rule got out by enthusiastic amateurs on standard machines.

(5) Accidents on reliability trials are very rare, and I cannot recollect one which has been due to the nature of the course.

(6) Your correspondent finally states that the union should have control of the sport. I agree, but the pivot of the question is, "Who is the Union?"—a matter which comes under the first heading.

Major Brook refers to the forthcoming Yorkshire Centre open trial, which is quite in order, as all have been advised what to expect. A few weeks ago we read that it was to be all "rough, heart-breaking stuff," but now we are earnestly assured that there are to be no freak surfaces and no freak hills. In my first letter I ventured to suggest that the proposal in question would go to stereotype the open trial. Is it possible that one of the most sporting and enterprising of centres has in any way been influenced by the present controversy, and that amongst the wonders of the Yorkshire dales we are not to have something really distinctive for this very reason?

K. S. TOPPING.
Hon. Sec., East Mid. Centre A.C.U.

### *A 365 DAYS' TRIAL?*

Sir,—To many motor cyclists the average reliability trial—when reported in the Press—is somewhat unconvincing.

This, one supposes, is probably due to the fact that nothing can persuade the man-in-the-street that the machines, entered by the makers and ridden by their experts, are not in many ways un-standard, being specially equipped and made suitable for the particular class of trial undertaken.

One does not entirely blame the manufacturer—he is out to win—and such precautions as are undoubtedly taken with the machines entered (for example, the recent Scottish Six Days' Trial) may be justifiable.

Now the makers are perfectly aware that these suspicions still lurk in the mind of motor cyclists, and for this very reason would, I think, welcome the chance of dispelling them.

Allow me, therefore, as an amateur, to suggest the following scheme for what it is worth, the details to be worked out by a more skilled mind than mine.

At the beginning of the competition season let such firms as Sunbeam, Triumph, A.J.S., and the remainder of the senior (and more opnlent) manufacturers invite the A.C.U. to select, say, four of their standard productions from any agent anywhere in the British Isles.

These machines would be retained by the A.C.U. throughout the year, being handed out to the firms in question in time to be ridden to the start of the trial, at the end of which the machines would be "returned to store."

Any subsequent replacements and adjustments would, of course, be noted by the A.C.U. at the time; these being completed, the machines would once more remain under lock and key till the next trial.

At the end of the year the combined report of the manufacturers' successes and that of the A.C.U.'s observations would be highly interesting, informative, and truly convincing.

One is aware that the scheme would cost money and considerable trouble, but in the end it would be well worth it, especially to the man about to buy a machine, and, after all, he is the one that matters.

There is already, one knows, a stock machine trial, but this, I think, hardly goes far enough.

Perhaps manufacturers would be sufficiently interested to send their views on the above to the Editor?

I am in no way interested or connected with the motor trade.

NELBIK.
London, W.2.

### *ON THE LOWER REACHES OF THE THAMES.*

Sir,—Can you, or any of your readers, tell of a suitable place for picnicing, accessible to motor cyclists, on the north bank of the Thames between, say, Barking and Southend? Plenty such spots seem to show during a trip on the water, but none seem to be visible or accessible from the main road.

A day's rest on one of the banks of the lower reaches of the Thames with its endless and interesting traffic would make a pleasant change from the purely country picnic.

Leytonstone. DOOGOROHT.

### *ABOUT HEAT.*

Sir,—In the correspondence "About Heat," if Mr. Brewster is desirous of accuracy, he should consider his statement "a refractive index cannot be measured if the body will not transmit the wave-length."

Apparently "Brewster's Law" has escaped Mr. Brewster's notice. He will find it in Watson's "Physics," page 577. It is thus that the refractive index of opaque solids, *e.g.* ebonite, is found.

L. H. WAKEFORD.

Sir,—I should like to amplify Mr. W. E. Marsh's remarks on the subject of the radiation of heat, as they seem to me to convey a very misleading idea of the true state of affairs.

First, as to the greenhouse. Mr. Marsh seems to imply that the sun's *light* produces the *heat* in the greenhouse.

THE ISLE OF MAN CAM!

From this unusual contour plan of the T.T. course—the idea of Messrs. A. J. Stevens, Ltd.—one can obtain a remarkably graphic illustration of the chief gradients of the famous Manx circuit over which last week's races were run.

The fact is that glass is opaque to the radiation emitted by bodies at a comparatively low temperature, but is as transparent to the radiation produced by bodies at a high temperature as it is to light itself. Hence the sun's heat radiation enters the greenhouse readily, but the heat radiation of the objects inside cannot pass out.

Next, as to the cooling. Air is the best heat insulator known. The heat is conducted from the cylinder to a minutely thin layer of air in immediate contact with it, and the rest is done by convection, the heated air being continually carried away and taking the heat with it.

A. K. GORDON.

### GEAR RATIOS FOR THE TOURIST.

Sir,—We have read with interest "Jay Cai See's" letter in your issue of the 25th ult., and while we fully appreciate his kind remarks regarding the construction and finish of our standard sidecar outfit, we must confess ourselves considerably surprised that he does not find our gear ratios to his liking, these actually being top 5¼ to 1, 2nd 11 to 1, and low 17½ to 1, *i.e.*, practically the same ratios as used on all the best-known makes. Should he be using the machine solo, our close ratio box, giving 5¼, 7.87 and 14, would, of course, be more suitable.

We note that your correspondent states that his Martinsyde can only attain a little over a quarter of its maximum speed on second gear. Since our standard product can always attain well over 20 m.p.h. on second, we feel that there must be some other cause, such as carburation, for his trouble. We shall be glad if "Jay Cai See" will communicate with us direct.

MARTINSYDE, LTD.
GEO. TILGHMAN RICHARDS.
General Manager.

### TAXATION.

Sir,—Replying to Mr. G. J. Hickling re "Motor Cycle Taxation," I should suggest that not only push-bikes pay 5s. tax, but that childrens' toy motor-cars, tricycles, scooters, and the like, should pay 2s. 6d., also that roller skates should be taxed at, say, 6½d. per annum. Perhaps the A.C.U. could take this up instead of trying to suppress private trials.

3½ TRIUMPH.

Westcliff.

### CAMPING ON THE SOUTH COAST.

Sir,—Can any of your numerous readers assist me to find places on the coast between Portsmouth and Folkestone where the pitching of tents for week-end camping is not objected to?

KE 8411

Westerham.

### R.A.C. SALUTES.

Sir,—I should like to hear the opinion of your readers as to whether they are saluted by patrols of the R.A.C. I have been a member of the A.C.U. for three years, and I think I have only been saluted six times (twice yesterday); yet I do not remember a single occasion on which an A.A. patron has not saluted, although I have only been a member for the same period. They (the A.A.) lay it down as a rule that there is something wrong if a patrol does not salute, and I wondered if the same rule applied to R.A.C., or is it they hold an A.C.U. member below the dignity of a salute?

It is not that I desire in any way to be saluted—as a matter of fact it is rather difficult to return it on a nasty bend, but I just enquire as a matter of interest.

London, W.14. KEN BUSH.

WINNER OF THE LIGHTWEIGHT T.T.

G. S. Davison (247 c.c. Levis), at the Ramsey hairpin, which tests driving skill, the general design of the machine, and the acceleration of the engine.

### 7 TO 1 COMPRESSION RATIOS.

Sir,—It is with much interest that I read the remarks of "Ixion" in your issue of the 25th ult., anent the G.R.I. engine.

Being responsible for the design of this engine, I would ask the indulgence of a little space in your valued journal, in order to provide some justification for the seemingly drastic departure from what has hitherto been considered possible, or shall we say, advisable in the matter of compression ratios.

As "Ixion" remarks, much was done during the war with the use and maintaining of high compression ratios at high altitudes, as in addition to the increased power obtained up to a point, this higher compression has a direct effect on fuel consumption which was, and of course still is, an all-important factor.

The limitation of this high compression ratio was brought by the presence of some "hot spot" in the combustion chamber, which set up "pre-ignition."

It is the absence of any "hot spot" in the G.R.I. engine combustion head which has made it possible to use a compression ratio of 6.5 to 1 in a standard production.

With regard to "Ixion's" reference to a ratio of over 7 to 1 being used, this is, of course, for a special purpose, and one wherein all the factors remain more or less constant, such as, with an accurately machined combustion chamber, a given piston speed and even distribution of temperatures for a given power output. Although detonation undoubtedly takes place, it can, under these circumstances, be regarded as a useful agent, rather than otherwise.

GEORGE R. INSHAW, A.M.I.A.E.

### PRICES OF ALUMINIUM PISTONS.

Sir,—I was much interested by "D.C.O.'s" letter *re* "Specialloid" aluminium pistons. I am glad to hear that they are so nearly perfect, as I thought about trying them until I received the "Specialloid' pamphlet with the price of the piston, when I rapidly changed my mind. I wonder why "D.C.O." did not mention the price? Because, after all, the price can be an advantage or otherwise—can it not?

A.H. 42.

Tynemouth.

[The price of "Specialloid" pistons varies acording to size. For an A.B.C. car the charge is £6, including gudgeon pins.—ED.]

### "IXION'S" REMINISCENCES.

Sir,—On behalf of a small party of non-expert enthusiasts, will you allow me to thank "Ixion" for many an uproarious evening this last winter, through one of our number chancing on his "Motor Cycle Reminiscences."

We made it a habit to take it in turn to read aloud a chapter on one night per week, and when we had finished we were so pleased that we started all over again!

We would now like to know, if we are not troubling you too much, if you are publishing, or have published, any more reminiscences, because, as MacAndrew says (that isn't his real name!), "I'd rather miss a 'gold' than another book like that."

Again thanking him for the wonderfully pleasant evenings we have spent with him.

J. DEXTER WATTS.

For and on behalf of "The Hounds."

[A second volume of "Reminiscences" will appear in due course.—ED.]

### DYNAMOS FROM OLD MAGNETOS.

Sir,—In reply to Mr. G. R. Thomson's letter, I beg to contradict his statement, that "8 volt bulbs of less than 5 amp. can be obtained at *any* garage or electrical shop," which I suppose come under his rather ambiguous name of "electrical engineers." Even if they were easily obtainable, their use in conjunction with the particular dynamo under consideration would not be advisable, since in the event of the head light bulb burning out or breaking the whole of the available current *would* flow through the other bulbs, unless the road speed were very low.

To convince Mr. Thomson of this fact would be rather difficult, since he seems to find even simple elementary calculations in Ohm's law rather complicated; but if he will carefully read my first article on this subject, and will also look up some standard book dealing with alternator characteristic curves, and the effect of armature reaction and reactance on permearat, or separately excited field systems, he will, no doubt, be able to understand why a small amperage bulb of the same voltage as the head light would burn out at, say, a road speed of 20 m.p.h., if the latter bulb was cut out of circuit in any way.

Mr. Thomson's series-parallel circuit is quite sound, provided two 6 volt 5 amp. bulbs be used in the series part of the circuit. These bulbs, in the event of the head light burning out, are quite capable of withstanding the surplus current without any serious danger of burning out.

I have proved the truth of my statements from experiments carried out with one of these dynamos, and if Mr. Thomson will construct one and do likewise, I think he also will be convinced.

W.R.

### RAIN AND RHODESIAN ROADS.

Sir,—I should like to know what part of Rhodesia "Overseas Triumph" lives in, and if he will tell me if he knows of a ten mile run where he can keep over 35 m.p.h. (also the road).

As he states, rain improves sandy roads, but he does not mention what it does to the country waggon track over red soil.

S412M

Rhodesia.

### ELIMINATE THE PRIMARY CHAIN!

Sir,—In a very interesting article on "Modern Practice in Engine Design," there is the statement that "although the Scott engine has been little changed in the last decade, it is still advanced in many details." This view I am sure will be fully endorsed by enthusiastic Scott riders—and what Scott rider is not enthusiastic over this fascinating mount?

The pity is that such an advanced engine, fitted into a remarkable frame, studied in every detail, with unexcelled mudguarding, has its reliability impaired by a ten-year-old transmission from the engine to a very satisfactory and fool-proof countershaft two-speed gear. It is surprising how the double chain system has survived on this engine, notwithstanding its obvious drawbacks, such as the impossibility of keeping both chains in proper tension at the same time, and notwithstanding the smooth torque of the engine, the short life of the chains themselves.

The Indian Scout, with its unit engine and gear box is a notable advanced example of what the future transmission between engine and gear box will be. Why are British machines, which are so much to the fore in engine design, general finish, and scrupulous attention to appearances and details, so conservative in retaining that bit of chain between the engine and gear box?

M. L. L.

Aldeburgh.

## Books & Maps for Motor Cyclists.

Issued in conjunction with *The Motor Cycle*.

**"MOTOR CYCLES AND HOW TO MANAGE THEM."**
The standard handbook on the motor cycle.

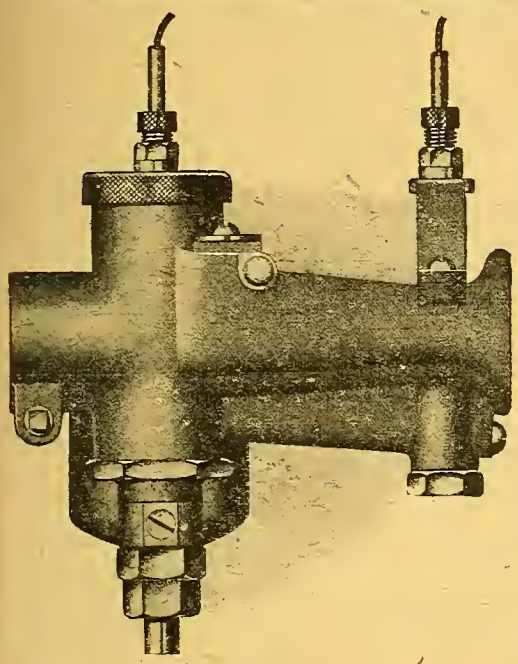
# BINKS CARBURETTORS NEW 1922 DESIGNS.



## A New SPORTS MODEL CARBURETTOR giving the ENORMOUS speeds and power of the famous "Mousetrap" combined with flexibility and slow running.

This Carburettor is ideal for Hill Climbs and fast touring where acceleration and speed count for everything.

**PRICE ON APPROVAL with spare Jets and Key For Singles or Twins. £6:6:0**

The slow running is obtained by a pilot jet under the throttle, and the correct suction on the main jet is maintained by the variable venturi tube which passes gas without loss at high speeds—in fact it even helps to cram the gas into the cylinder.

It is not an extravagant Carburettor, as non-spilling jets are fitted.

Beautifully made—accessible—swivelling float chamber—a delightful thing to own.

Order it to be supplied to you fitted to your Sports model.

## QUALITIES OF THE BINKS 3-JET DAMPING CARBURETTOR.

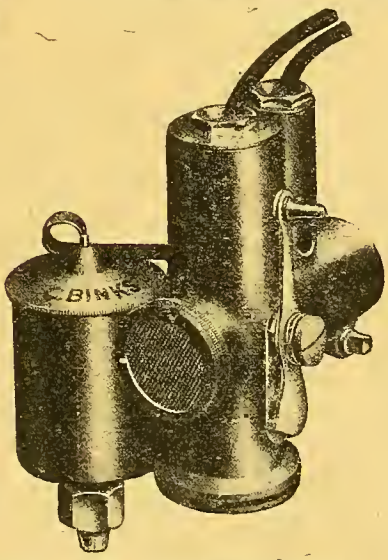
Marvellous slow running, flexibility, lively acceleration and power, and a truly automatic mixture are the recognised attributes of this world famous instrument, but the **astounding fact is that in addition, the mileage per gallon is definitely increased from 30 to 75 per cent.**

EXAMPLES.

| | | | |
|---|---|---|---|
| 4 H.P. SOLO MOUNTS | do | 120/150 | m.p.g. |
| „ SIDECAR | „ | „ 65/90 | „ |
| 6 & 8 H.P. | „ | „ 50/65 | „ |
| including Big Harleys and Indians. | | | |
| DOUGLAS MODELS 2½ | do | 115/150 | „ |
| „ 4 H.P. with Sidecar | | 55/65 | „ |
| SCOTT SOLO .. | .. | 65/70 | „ |
| „ SIDECAR .. | .. | about 50 | „ |
| Lightweight Two-Strokes ... | | 120/140 | „ |

If you do not get this mileage, you can do so.

Mr. CHAS. L. BINKS.



**THE FAMOUS 3-JET DAMPING BINKS CARBURETTOR. For Town and Country.**

Price - **£3 15 0 + 2/-** postage.

## AN OPEN LETTER TO MOTOR CYCLISTS.

*Ladies and Gentlemen,*

*We are presenting to you by this advertisement two of our very latest productions, and we are sure they must be of interest to riders of all machines.*

*The new Sports model is a revelation in acceleration and power—in fact it is the record winning Mousetrap Carburettor with a pilot jet to give it slow running and flexibility. I can personally recommend you to fit it to your "Sports Sunbeam" or "Norton," and you will get two to five more miles per hour, and more violent acceleration. It is an ideal sporting Carburettor to have, and fulfils a long-felt want where extreme economy is not the first consideration.*

*The three-jet model is the Carburettor for touring, and gives you a control over your machine which is delightful in town and country alike. It really saves you money. The low petrol consumption is no mystery. The simple fact of controlling the jets by dampers and getting a perfect mixture at all speeds ensures this economy by preventing waste.*

*To enable you to try the Carburettor and to prove its merits the Carburettors are all sold on approval. By this we mean that if you find that the Carburettor does not do as we state you return the Carburettor to us and we refund you your money less 7/6. This offer in the past has been greatly appreciated by the public.*

*We invite you to call at the works personally either for a talk on Carburation, or to have your machine fitted, and we ask you to apply for our literature and book on Carburation free of charge.*

*Yours sincerely,*

*Harold Binks.*

## Outstanding Features of the Binks 3-Jet.

1. **The control is by one lever—smooth and gradual in action.**
2. **The jets are easily got at, permitting you to adjust the Carburettor to perfection to the requirements of your individual machine.**
3. **The mixture is automatic and flexible because the 3 jets in their sequence of operation provide a perfect mixture.**
4. **Economy is obtained by having 3 jets controlled by dampers. At slow speeds one jet works whilst the two big ones are sealed, and it is only when power is wanted that the big jet is allowed to work.**
5. **Starting is easy from cold. You simply close the shutter at the side—then open. Very useful on two-strokes.**
6. **An Extra Air Valve is fitted to enable you to coast down hill—using your engine as a brake and cooling it at the same time.**

Mr. HAROLD BINKS.

**C. BINKS (1920) Ltd., Eccles, Manchester.**

# THE MOTOR CYCLE Insurance Policy

*Issued by the Autocar Fire and Accident Insurance Company, Ltd.*
*(Incorporating "The Autocar" Insurance Dept.* Established 1904).

**COVERING MOTOR CYCLES or CYCLES and SIDECARS—**
**Used by Owners for private or professional purposes or personal business journeys.**

**1. THIRD PARTY.**
Legal liability up to an unlimited amount, including law costs. Also indemnifying Insured whilst driving any private motor cycle not belonging to him. Defence of any police summons for driving to the danger of the public when an accident as insured is concerned, free of legal costs

**2. DAMAGE TO CYCLE**
by accidental external means. Reasonable repairs may be put in hand at once.

**3. FIRE**
including tyres and accessories.

**4. THEFT**
including tyres and accessories when machine is stolen. Damage by attempted theft included.

**5. TRANSIT**
by road, rail, or inland waterway, also short sea journeys to continent, etc.

**6. BONUS.**
10% reduction off renewal premium if no claim.

**EXTRAS.**

To extend Policy to cover use by and to indemnify—
one additional rider, 33⅓% extra. Any licensed rider, 50% extra.
Cycle used solo to carry passenger on pillion seat or luggage carrier—**50% extra.**

**ACCIDENTS TO OWNER.**
**Benefits:** Death £250.
Loss of two limbs, or sight of both eyes, £250.
Loss of one limb or sight of one eye, £125.
Total disablement, limited to 26 weeks each accident, £3 per week.
Premium 30/-

**Half Benefits—Half Premium**

**PASSENGER IN SIDECAR.**
**Benefits as for Owner:**
Covering any passenger not suffering from physical infirmity, and not less than 17, or more than 55 years of age. Premium 30/-

**REDUCTIONS.**

**To be taken off premiums (A) only.**
15% if Insured bears first 50/- of each accident.
20% if Insured bears first £5 of each accident.
33% if Insured bears first £10 of each accident.

**SCHEDULE OF PREMIUMS.**

| Not exceeding | A — Full Policy. All Sections 1 to 6. | B — Third Party, Fire, and Theft. 1, 3, 4, and 6 only. |
|---|---|---|
| 2¾ h.p. | £4 10 0 | £2 8 0 |
| 4 h.p. | £6 10 0 | £2 14 0 |
| 5 h.p. | £7 0 0 | £3 0 0 |
| 10 h.p. | £9 0 0 | £3 12 0 |

If value exceeds **£100**, add **15/-** under Table A or **10/-** under Table B for each additional **£50** or part thereof.

# Have you taken advantage of the new price-reduction?

THE

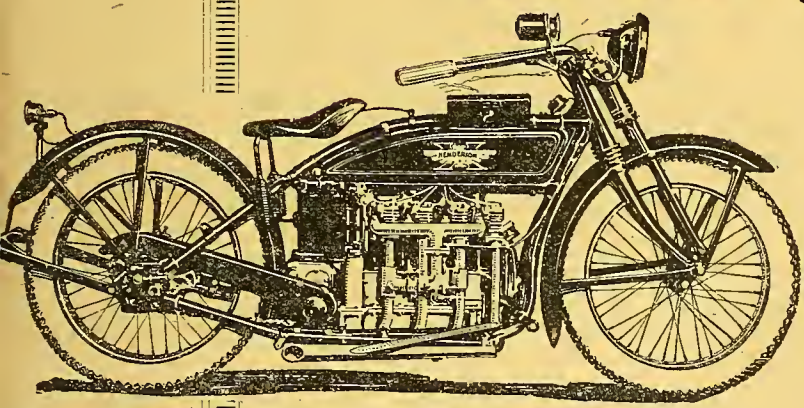
# HENDERSON

## DE LUXE

## FOUR-CYLINDER MOTORCYCLE

NOW COSTS ONLY

## £165 — *including full electrical equipment*



*e Henderson, alone ong motorcycles, can fitted with a reverse sidecar use, at an extra cost of*

**£7 10 0**

This is precisely the same 1922 model that we have been advertising for the past few months, and is not altered in any detail of specification, the drop in price being a purely natural outcome of improved trade conditions.

Note the massive front fork design and the way in which the front wheel is trailed, so that shocks are met easily and naturally; note the accesssible position of the chain (the only one) on the off-side; note the free saddle suspension and low riding position.

The Henderson gives far more in proportion than is represented by its price as compared with singles or twins. The four-cylinder is in a class of its own, as was proved in car practice a decade or more ago. The luxury of having 11.5 h.p. at your disposal, and in such a velvety, sweet-running form, can only be realised by experience.

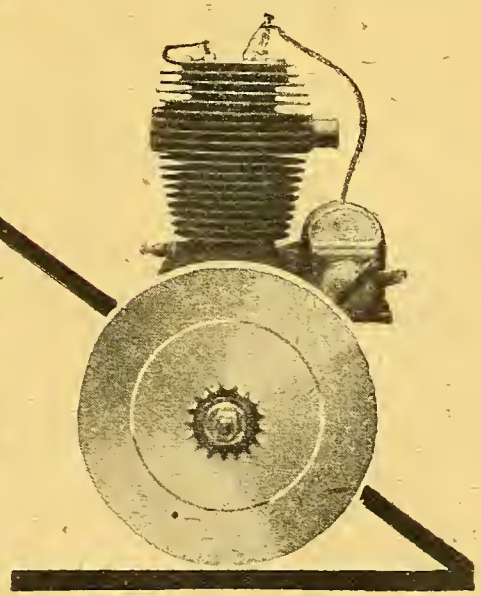
# The simplicity of the single Sleeve Valve

IN the Barr & Stroud Engine a simply operated sleeve replaces all valves, springs and tappets necessary in a poppet valve engine. This sleeve is raised and lowered and at the same time rotated inside the cylinder by a pin at the foot which operates in a ball and socket coupling set in the half-time wheel. There are ports in the sleeve corresponding with ports in the combustion head.

There are no valves to leak or require renewing. The engine is mechanically silent when new and will retain its silence.

Speed 60 m.p.h. Fuel 140 m.p.g.
Oil 2,500 m.p.g.



The
# BARR & STROUD
# SLEEVE VALVE
# 4-STROKE ENGINE

"It's the Engine that Counts"

Fitted by the makers of the following machines:—Banshee, Beardmore Precision, Coventry Mascot De Luxe, Diamond, Edmund, Hagg, New Gerrard, P.V. and Royal Scot.

Messrs. Warnes, Ltd., 46, Churchfield Rd., Acton, London, W.3., specialise in fitting the B. & S. engine to existing machines.

# OFFICERS' ARMY TRENCH COATS

## THE GENUINE "WESTO" TYPE

**47/6** Post Free in Great Britain and the Irish Free State.

With All-Wool Detachable Fleece Lining
**62/6** each.

**Reduced from 75/- and 70/-, at which prices over 35,000 have been sold in the last 8 months.**

## Quite 75% below present-day prices.

These goods can never be duplicated at the price.

**WE have foreshadowed for some time in our advertisements that the stock of Government Material for Officers' Army Trench Coats was becoming rapidly exhausted. That time has nearly arrived, and in order to rapidly clear our remaining stocks we have reduced our price to the above amazing figure. We confidently anticipate that this Sale will clear our stocks; thereafter *coats of this quality* will not be obtainable under FIVE GUINEAS each.**

Brand New, Tripleproof Gabardine, check lining, **oilskin *inter*-lining**, and with detachable **All-wool** fleece lining. **Four Coats in One.**

These Coats are impervious to weather. Worn with the fleece lining, they combine the warmth and comfort of an ulster with the rain-resisting qualities of a stout mackintosh. With this lining detached they are a light, elegant raincoat. Thousands of officers and ex-officers testify to their worth. They will last for years—even war conditions could not wear them out.

*This is the only coat made THROUGHOUT with surplus Government materials, which we control.*

### POINTS FOR TRENCH COAT BUYERS.

1. A Genuine Officer's Army Trench Coat made with Government Surplus materials will last for years. An inferior one will "crock up" in a few months.
2. See that the fleece lining is ALL WOOL.
3. See that the fleece lining extends down the sleeves to the wrist.
4. See that the interlining is oilskin or oil cotton and not a rubber solutioned fabric which is perishable.
5. See that you deal with a "MONEYBACK" Firm, so that if the coat does not meet with these requirements you can demand a refund.

### OUR GUARANTEE.

**We guarantee this coat to be as described above and that the description is in no way exaggerated. If the customer is not satisfied with his purchase we guarantee to return his money in full without question provided the coat is returned unworn and undamaged within seven days of purchase.**

**MONEYBACK PRINCIPLE.** **All our business is conducted on the "Moneyback" principle. Inasmuch as a Mail Order Customer has no opportunity of inspecting his goods before purchasing, this is the only fair and satisfactory way of conducting a Mail Order Business. An announcement such as ours forms a legal contract between the Seller and the Purchaser, and, therefore, fully protects the latter.**

Chest sizes, 34, 36, 38, 40, 42, 44 ins. When ordering state height and chest measurement over waistcoat. Outsizes (i.e., over 44 ins.), 10/- extra.

## SEND YOUR ORDER TO-DAY—IT WILL BE EXECUTED TO-MORROW.

**Art Catalogue illustrating this and other Bargains in wearing apparel FREE ON REQUEST.**

*Cheques, Money Orders and Postal Orders should be crossed Barclays Bank, Limited. Treasury Notes should be registered.*

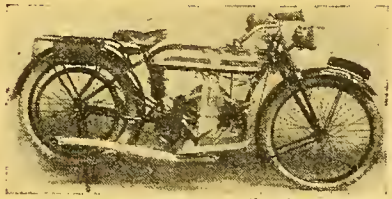
# 55 M.P.H. GUARANTEED

## *Special Offer of new*

## 1922 2¾ H.P. Douglas.



Fitted with "Zoom! Zoom!!" exhaust system, alloy air-cooled valve caps, special pistons, combined footrest and aluminium footboards, special valve springs, low saddle position, tuned and guaranteed to do 55 m.p.h. Delivered anywhere. Price **£69 10s.** inclusive. This is only 30/- above list price and is an opportunity you should not miss if you are purchasing a motor cycle. Not shop-soiled or second-hand, but new ex Douglas works, with full guarantee. Fully equipped as makers' specification.

**A NEW TWIN RING PISTON.**

Scientifically designed to prevent distortion. Four strengthening webbs and radiating fins, gudgeon pins supported correctly. Much lighter than standard pistons, yet double the strength. Piston with rings and gudgeon pin, **14/6.**

**ZOOM! ZOOM!!**

Are you Zooming it This lovely exhaust pipe gives a lovely Zoom note and provides an expansion chamber many times the cylinder capacity; it silences without back pressure. The most efficient system yet devised; over 2,000 sets already fitted. Beautifully finished in polished copper plate, **30/-.** Nickel plated, **33/6.**

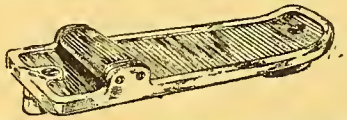
**TOOLBAGS,** metal armoured, two straps and buckles, finest quality for 4 h.p. Douglas. Usual price 20/-. My price **10/-.** Smaller size for 2¾ h.p., two straps and metal covered real leather. List price 11/-. My price **7/6.**

**A SADDLE OF REAL MERIT.**

Pan Seat covered in real leather, adjustable springs, gives a low riding position on 2¾ h.p. and does not foul the 4 h.p. Sidecar Stay. A real comfy seat. List 35/-. My price **25/-.**

**LEATHER TOOL ROLL.**

A real heavy affair that will stand rough usage. Fitted with leather pocket, two side flaps, leather centre tool holder and leather strap. **5/-** each.



**THE TONY COMBINED ALUMINIUM FOOTBOARD AND FOOTRESTS** (patented). **30/-** per pair.

## DOUGLAS SPARES.

# The machine to buy

¶¶ Before you settle on your next season's mount, get in touch with us. We specialise in the two machines named here. Let us tell why we concentrate on them,

**NORTON** and ON THOSE TWO ONLY.

¶ We think our reasons for so doing may interest you—even more, they may convince you that either the Velocette or the Norton is the machine YOU should buy. Which of the two you will choose depends entirely on your requirements. But we do maintain that they both represent the best of their respective types—and that you can't do better.

¶¶ A very special feature of our service deals with Sports and Competition Machines. We tune up new machines for Competition work free of charge. Or, we will overhaul your existing mount, giving you better speed and better results in every way, on reasonable terms. Our many years of competition experience is at your disposal.

**VELOCETTE**

*We have all 1922 Models for immediate delivery anywhere. Cash or Deferred Terms*

## The Sport and the Masses.

IF, as was claimed in these pages recently, the motor cycle Tourist Trophy race is the premier sporting event of the year, why is the general public so apathetic?

The Derby and the Grand National are common topics of conversation throughout the country for days before they are held, yet fully 90% of those who gravely discuss these fixtures have no particular interest in horse-racing, nor is betting the real attraction in the majority of cases.

The Boat race fascinates thousands who cannot row, and thousands more who have never seen Oxford or Cambridge. The chief billiards, boxing, and golf championships are breathlessly followed by like numbers who are ignorant of the most elementary rules of these sports. Yet the man-in-the-street does not know what the letters "T.T." stand for, and thinks most likely that "A.C.U." is some kind of trade union. It is a great pity.

*The Motor Cycle* film has done, and will do, a great deal to break down this barrier of ignorance, but until everybody of licenceable age is a motor cyclist it rests with the daily Press to stimulate the interest of the non-motoring masses and help the T.T. races to attain the importance in the sporting world which they have long ago reached in their own sphere.

## The Conservative Car Owner.

THERE is more than would at first sight appear in the article in last week's issue by a car-owner dealing in an unsophisticated manner with his impressions of a two-wheeled vehicle. His unconcealed surprise that anything not soundly bedded on four wheels can provide even the slightest road pleasure is amusing.

The author, a distinguished contributor to *The Autocar*, confesses to a profound ignorance of motor cycle matters, and, in a way, he typifies a class which has no great incentive to be other than ignorant of the controllability and reliability of the modern motor cycle.

In his case the conversion was effected by an unconventional lightweight of low power, designed to attract the timid, but we venture to suggest that he would have experienced even greater surprise and pleasure had he gone a step farther and tried, say, any first-class semi-sporting solo mount of to-day. In performance, controllability, and reliability he would have found little to choose between the motor cycle and a car costing ten times as much. The pity is that the average car-owner simply refuses to believe this.

## Heat Wave Comfort.

IF, as we are told, the summer of 1922 is going to be a repetition of last year's, the motor cyclist will more than ever have cause to be pleased with his choice of a recreation.

Not many pastimes share with motor cycling its attractiveness on a broiling hot day, not only as a means of reaching the shadiest country nooks or the ever-refreshing sea, but in itself as a way of keeping cool. When the temperature is high there is nothing to compare with a swift rush through the air on a motor cycle.

True, with the heat comes the dust, but off the beaten track the nuisance is seldom very noticeable, and a good pair of goggles provides a ready and efficient antidote. Incidentally we fear that the average motor cyclist is inclined to minimise the importance of this latter item of his equipment—very false economy indeed.

On the whole the motor cyclist will be the last to grumble at the continuance of a heat wave or drought of the severity likely to be experienced in these islands.

An index to the advertisements in this issue will be found on the page facing the back cover.

# OCCASIONAL COMMENTS

BY IXION

## Bad Debts.

WE all notice that motor cycles have fallen in price since 1919. One economy adopted by most firms is the No Credit stunt. I have just learnt it to my cost. The other day my stand wilted like a wax candle in August, and simultaneously I required a peculiar washer, unobtainable except at the factory. Having been a customer since 1906, and knowing many of the factory staff intimately—not to speak of my eminent position in motor journalism (ahem !)—I presumed on all these things to order a new washer without enclosing the dibs (didn't know the cost) and to ask for a new stand to be forwarded instanter, instead of waiting till they had microscoped the wilted article and satisfied themselves that it was super-heat-treated by a tight mechanic, or something of that kind. Not a bit of it. For seven long days I watched the post, and finally there arrived the coldest of formal notes promising to dispatch a new washer on receipt of 3d., and guardedly indicating that a new stand might or might not be forthcoming after their laboratory experts had done their what-d'ye-call-it on the old stand. I feel so small. I have meekly forwarded 3d. For the nonce my machine rests with one footrest on an inverted flower-pot in the garage. And I had thought I was a small somebody. So you can guess what you'll get, dear ordinary reader.

## The Rudge's Mad Moment.

OF late our columns have contained assorted communications anent the curious manner in which certain Rudge engines behave, travelling at one moment like perfect little ladies and at another like infuriated buffaloes. Various amateur physicians diagnosed the symptoms as being due to mountain air, temporary relief of high-compression ratios by fragments of carbon, and the like. At last a prophet has arisen in Israel. I haven't a Rudge at hand at the moment, so I cannot verify his theory, but it strikes me as far more plausible than its rivals. From time to time, so runs his rede, Rudge's have modified their inlet valve springs and domes in sundry petty respects. If you happen to put a new spring of a certain type on a dome of a certain type, the spring may find some difficulty in bedding down dead true around the valve. In that case its normal working attitude may be a thought cock-eyed. The valve stem will bind in its guide a little; possibly the valve may not even seat perfectly. Super-rudging will be impossible under such conditions. Anon, perhaps when the tail of the spring chances to work round the dome, the spring may temporarily become axially concentric with the valve. Extra h.p. will then be available, disappearing again if the spring once more emulates the leaning tower of Pisa. Sufferers please verify and report.

## "Private" or "Pirate" Owner.

SOME of the trade representatives in the Isle of Man brought away unpleasant impressions of the baser type of "private" owner. Individual entrants are not required to sign contracts in return for goods supplied, but are treated as gentlemen, *i.e.*, the traders take it for granted that such applicants *bona fide* require the supplies in connection with the race. What are they to think of so-called amateur riders who calmly tap all the rival firms for motor cycle equipment free of charge, plus a contingent bonus for finishing, for mileage, and even for starting, and who are then seen to be shipping back to England after the race sufficient stuff to start a small garage—a dozen outer covers of assorted makes, two or three crates full of tins of lubricating oil, a bucketful of sparking plugs, a furlong of chain, three or four carburetters, etc., etc. ? Thorny as the amateur question certainly is, I believe the time has come for the A.C.U. to display some energy in the matter. The trade requires protection from such barefaced piracy. Even more emphatically, the best type of amateur will be driven out of the racing game if it becomes a pastime for persons who ask for presents to be made them and then sell those presents. The whole business comes perilously near obtaining money on false pretences. If the trade does not care to prosecute, the A.C.U. might surely suspend or disqualify for this offence?

## A Remarkable *Début.*

MOTORING history surely affords no parallel to the audacious behaviour of the Sheffield-Henderson machines. Their first season ostensibly caught them between the devil and the deep sea. Machines with a special *cachet* for speed could certainly not abstain from the T.T. On the other hand, how could a newcomer hope to accomplish anything? Moreover, as the machine is built in three sizes, the obvious alternative was to enter in all three events or in none. The bold course was taken. The aspiring infant was started in the Lightweight and the Junior and the Senior. What is far more to the point, it ran well forward in all three races at the very first time of asking. I believe the explanation is that the designer is an exceptionally skilled metallurgist. Rumour whispers that by 1923 he may develop an engine of his own. When, and if he does, we shall look forward to something remarkably special.

**Occasional Comments.—**

## Another "Series Wiring" Puzzle.

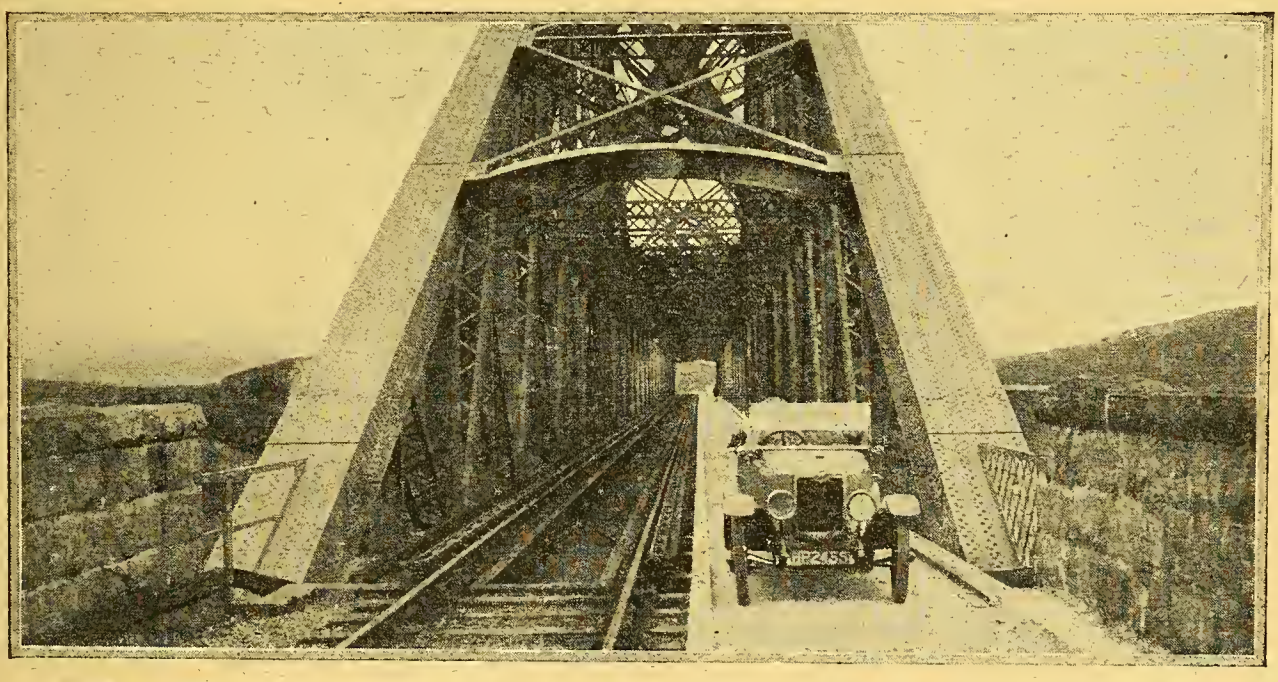
I HAD taken a solemn oath to print no more electrical puzzles, for the last one embroiled me with a horde of hot-headed experts till I felt like the pancake when the Westminster boys have done with it. But now comes a solemn appeal from a person of exalted station in the trade. He has a sidecar, with its tail and side lamps wired in series. The two bulbs are alleged to be identical, but they aren't. At least he thinks not. For they will not both burn brightly simultaneously. If he swops them round, the one which aforetime was brilliant now becomes pallid, and *vice versa*. Moreover, one or both of them burn out with annoying frequency. And when he purchases an alleged duplicate, the old story goes on. Solutions may be sent to our Correspondence columns. When these electrical high-brows really get on the bummel across me, I feel as Little Tich would feel if he had to referee a championship fight between Dempsey and Jack Johnson. I refuse to act as intermediary in any more set—what *is* the plural of "set to"—of this character.

## Close Ratio Gear boxes.

THE gear box people will say we are insatiable, but a reader puts forward a suggestion which is at least worth considering. He rides a modern sports machine equipped with a close-ratio gear box. He doesn't state his actual ratios, but I rather fancy that his bottom gear is 8 to 1. A ratio of 8 to 1 is quite low enough for any modern solo bus of 350 c.c. or over on main roads; it would laugh at Sutton, and Porlock ought not to alarm it. But he occasionally desires to accompany a freak trial, and dislikes making an ass of himself in public. The competitors in such trials often use bottom ratios of 16 to 1. On the other hand, his existing bottom gear (of say 8 to 1) is practically useless in ordinary fast road work. He starts with a push on second gear. Second gear will climb anything where the surface allows him to let his engine rev. So he asks for a "sports" gear box, with "close" top and second ratios for road burning, and a "climb anything" bottom gear. We cannot expect gear box makers to upset their organisation for the sake of a very limited market. A four-speed gear box seems the simplest solution of his trouble, and a four-speed box weighs very little more than a three. But I agree with him that a genuine "close ratio" box is not very suitable for all-round work.

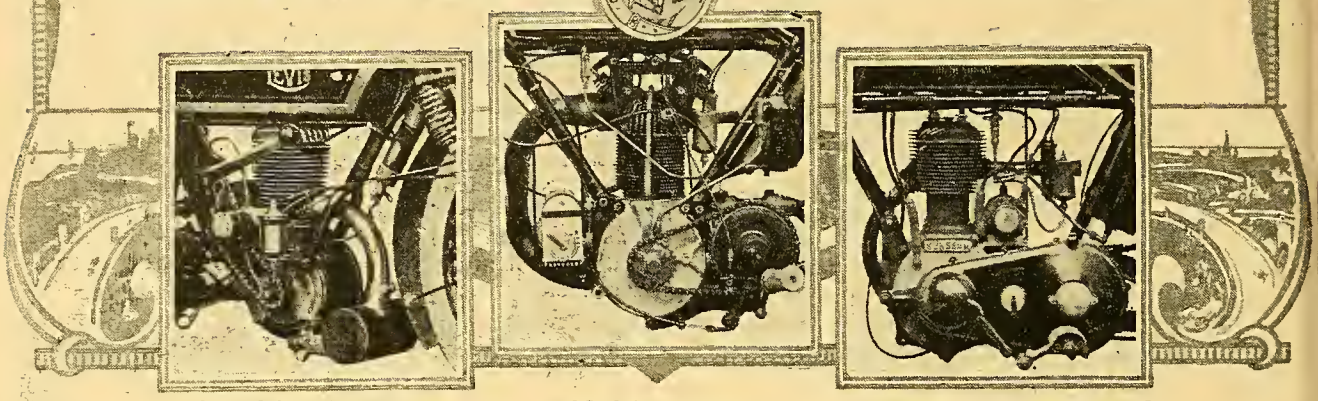
## Sideslip and Big Tyres.

I HAVE written so often and so deliriously in praise of big tyres—say 3in. on a 500 c.c. machine—that honesty compels me to ventilate the one doubt troubling my mind about them. I should love to hear a discussion between half a dozen cute men with varied experience as to whether the 3in. tyre skids more than the 2⅜in. Naturally it would do so if blown "puddingy," because it would roll. So when dangerous grease is about, one blows the big tyre harder than usual. Blown hard, it is very resilient, it sets the machine jumping, and a jumping machine side-slips. There are so many other factors concerned with a skid—centre of gravity, design of tyre tread, steering rake, local geology, nerve of rider concerned, and the like—that I haven't the pluck to dogmatise. But my present impression is that the small tyre is steadier on bad grease, if only fractionally so.



ANOTHER SCOTTISH SIX DAYS' TRIAL. Last week the R.S.A.C. held a six days' reliability trial in Scotland for light cars. Although none of the 'best" Highland hills—Applecross, for example—are any longer snow-bound, the club chose an easier route than usually figures in the motor-cycle event. Nevertheless some interesting data were obtained, particulars of which, and a full report of the event, are contained in this week's issue of "The Autocar." A competing Riley crossing the bridge at Connel Ferry.

# TECHNICAL ASPECTS



Levis 248 c.c. (two-stroke). A.J.S. 348 c.c. (o.h.v.). Sunbeam 492 c.c. (side-valve).

## Contemporary Motor Cycle Design Reviewed and Criticised in the Light of the T.T. Races, the Most Searching Test of the Year.

EVERY year T.T. machines show definite evidence of advancement. The last two years, in particular, have shown an enormous improvement, not only in engine performance, but also in general motor cycle construction.

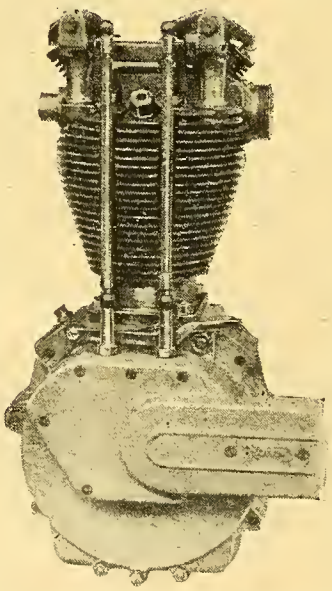
It is, however, not only to the winning machines that we have to look for the future of our touring mounts, but also to the general run of competing machines, for many manufacturers utilise the Isle of Man course as a testing ground for next year's special features.

### Cooling.

On the two-strokes the use of aluminium for cylinder head construction was very noticeable. Levis machines retained their shrunk-on head and barrel cover, the Velocettes employed very thick and deeply ribbed bolted-on aluminium head. A bolted-on head of similar material was used on the Ivys, while the Sun Vitesse went the whole hog by employing a complete aluminium cylinder with cast iron liner. The Levis win in the lightweight event was a triumph not only for the two-stroke but also for the composite cylinder, especially as a Velocette ran into third place. In the senior event also Scotts finished 3rd, 4th, and 9th.

As yet the four-strokes have not come into line in this respect, largely because of the difficulty of fitting valve seats of a suitable material and still finding room for valves of sufficient diameter.

The extent to which aluminium was employed in piston manufacture was only obvious to those who had the opportunity of seeing the engines stripped for examination, but it may be stated that by far the greater number of engines were so fitted. To quote but a few examples, alloy pistons were used in such well-known machines as Sunbeam, Triumph, Norton, Indian, Rudge, Velocette, New Hudson and J.A.P. and Blackburne engines, the Rudge piston being peculiar in that the bearing surfaces were divided into diagonal lozenges. In some cases these pistons were of slipper construction with the walls cut away right up to the piston rings except on the thrust surfaces, in others full skirted pistons were employed, notably in the case of the J.A.P. ridden by Le Vack, but in almost every case the importance of aluminium pistons for internal cooling as well as—or even more than—for weight reduction, was more fully appreciated. This point is most important, for so long as ultra light, thin-walled alloy pistons are employed, so long shall we suffer from "slap," burning, and distortion troubles, while the introduction of slightly heavier types will lead to the general employment of aluminium pistons for touring purposes.



An o.h.v. Norton engine used experimentally in the Senior T.T.

### Alloy, Steel and Iron Pistons.

Brandish's Triumph piston finished in perfect condition. Bennett's Sunbeam, however, was dry from want of oil on two occasions. Sheard employed a light steel piston, and Davison's Levis was fitted with a very light cast iron piston, which finished well but had obviously been very hot in the head.

There was some improvement in the arrangement of cooling ribs, but it does not seem to have been fully realised that it is of little practical use to have ultra deep ribs if the pitch is too fine or that it is preferable that the ribs should be arranged so as to lie parallel to the cooling draught.

The new o.h.v. J.A.P. is a fine

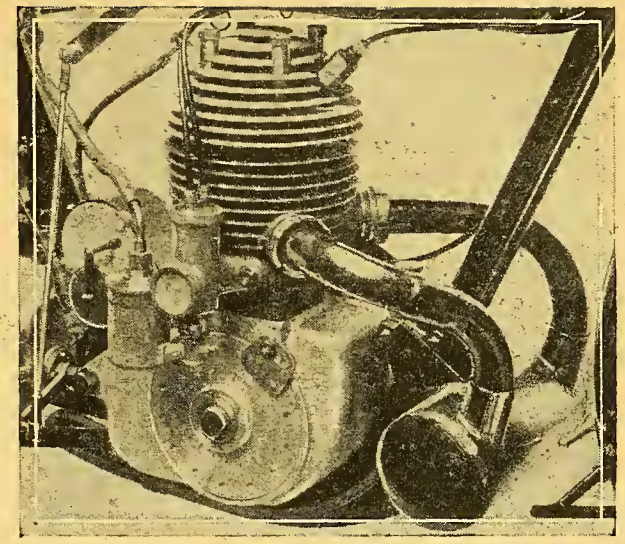
**Technical Aspects.—**

example of air-cooling as it should be. We were not surprised, therefore, to find that Le Vack had decided to use the same engine as he had ridden in the Junior race for the Senior event. In fact, he did little more than change the valves and springs.

### The Triumph Mechanical Lubrication.

Perhaps the most striking feature of all was the almost universal adoption of some form of mechanical oil feed. Triumph, Indian, New Imperial, Beardmore-Precision, Sunbeam, and Velocette have all developed satisfactory systems of their own; the first-mentioned firm employed a double pump of the oscillating plunger type in conjunction with a dry sump system, a scheme which has the advantage of assisting internal cooling since the temperature of the circulating oil is cooled to some degree in its passage to and from the tank. Undoubtedly the wonderful condition of Brandish's machine at the end of the race was largely due to the lubrication system, which ensured a constant film of clean oil on every working surface. In most other cases a mechanical pump only was used to feed the requisite amount of lubricant to the engine. Even this is a big step in the right direction, and it is to be hoped that manufacturers will remember that some such device is even more badly needed by the average tourist than by the T.T. rider, whose knowledge and experience enable him to oil his engine regularly. In the Isle of Man it was usual but by no means universal practice to find an auxiliary hand pump fitted for emergencies, but it should be possible to omit this precaution from touring machines of the near future. Showell or Best oil pumps appear to be the favourite proprietary articles, but the Lamplugh pump was used in at least one instance; amongst the machines fitting one or other of these pumps were, Coulson, Sunbeam, Diamond, Massey-Arran, Rudge, Sheffield-Henderson, H.B., O.E.C.-Blackburne, Cotton and New Gerrard.

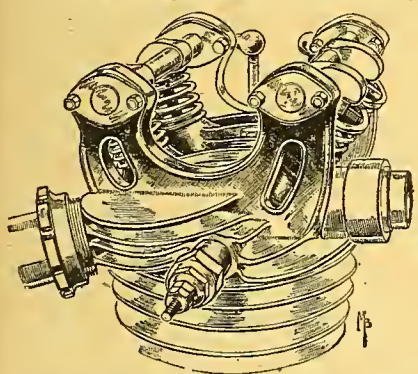
In addition to this list, another firm of high repute intended to employ an ingenious lubrication system of their own design, but had insufficient time to try it out previous to the races. Once the mechanical oil pump becomes an accepted part of standard machines we may look forward to a steady improvement not only in lubrication systems but in motor cycle performances.



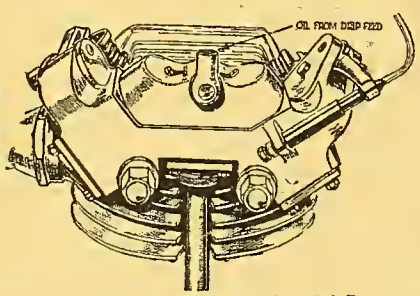
The 249 c.c. Velocette engine. In the Lightweight race the Velocette reached third place at 46·90 m.p.h.

### Valve Position.

While on such first-class racing engines as the Sunbeam, Indian and, in the main, Norton and J.A.P., the side-by-side valve position was retained, there was a big increase in the number of o.h.v. engines in all races. The Triumph organisation has definitely accepted the practice for fast work; Nortons show a tendency to follow suit. New Imperials have a decided leaning in that direction, and the makers of J.A.P. engines are flirting with the idea, as instanced by Le Vack's most interesting engine, which employed two short bevel-driven camshafts, one for each valve, thus eliminating push rods. With this exception all overhead valve gear was operated by push rods, and it is a sorry commentary on the system as applied to motor cycles to find that some riders carried as many as four spare rods. The A.J.S. had overhead valves for the third year, Douglas sporting models have been so equipped for some time past, side valves have never been used on the Duzmo, and a host of machines were fitted with o.h.v. Blackburne



Arrangement of the overhead valves on the T.T. Triumph. The design varies but slightly from the standard model.



Valve gear of the new o.h.v. J.A.P. engine which performed so well in the Junior race.

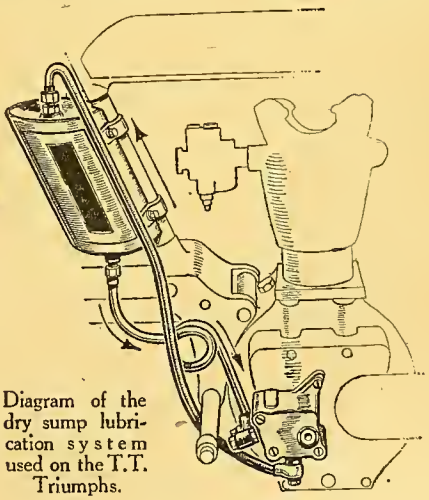


Diagram of the dry sump lubrication system used on the T.T. Triumphs.

**Technical Aspects.—**

engines. Even those retaining the side valve system are in many cases aware that, given equally good design and workmanship, the overhead valve engine scores for speed, acceleration, and economy, but not all of them are prepared to risk their reputations on standard touring overhead engines without further road experience. Triumphs retained their four-valve engine, but on the remaining makes two valves only are employed.

Valve trouble, though common enough in practice, was not unduly prevalent in the races, and o.h.v. engines sinned in this respect no more than other types.

One is not apt to associate valves with two-stroke engines, yet the Sun-Vitesse employed a simple form of rotary valve in the crank case by which means the mixture charge could be correctly timed while an additional and scavenging charge of air is drawn in through a piston-controlled port and forms a buffer between the burnt charge and the mixture proper. In this connection one is constrained to wonder whether the two-stroke of the future will not incorporate some such simple form of valve gear by means of which output per capacity may be increased and fuel consumption reduced. With the exceptions already mentioned, single-cylinder two-strokes appeared outwardly to have altered but little, though results prove that internal improvements resulting in an increase of speed have been effected.

### Transmission.

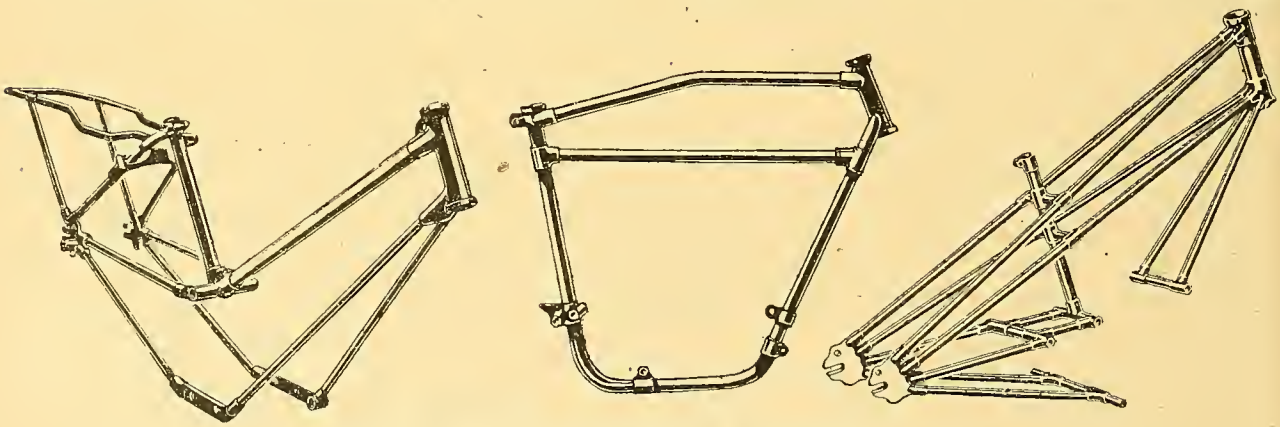
Undoubtedly a feature of the 1922 T.T. was the amount of care expended on the lubrication of the primary chain. An oil-bath chain case, as is exemplified by the Triumph and Sunbeam, appears to be easily the best solution of the question, but there are some who prefer instant accessibility to the risk of trouble in an enclosed part. Thus we find the majority employ exposed chains and either a breather pipe from the crank case directed on to the chain or a small auxiliary oil tank for the sole purpose of chain lubrication. Amongst those using auxiliary oilers were to be found O.K.-Junior, Levis, Scott, Sheffield-Henderson, and New Hudson, the ingenious saddle-operated oil pump of the Sheffield-Henderson being particularly noticeable.

Close ratio three-speed countershaft gear boxes were almost universal, though the Scott retained its selective clutch two-speed, which enables lightning changes to be effected. Racing gear boxes usually provide extreme ratio variations of slightly less than 2-1, and one might quote 4.25, 5.5, and 7.75 to 1 as being roughly typical of the normal range. Apart from firms manufacturing their own gear boxes the field is divided between a number of proprietary gears all of which are familiar to our readers, though the foot-controlled Moss gear which made its *début* in the 1921 Junior race should appeal to a large class of rider. Outwardly gear boxes have changed but little, and even internally the improvements hinge chiefly on better production methods.

### Brakes.

Of vital importance to both touring and T.T. riders, brakes showed a very considerable amount of improvement. It is essential that brakes should be not only powerful but also smooth and perfectly reliable. Belt rim brakes, or more properly "dummy belt rim" brakes, were still used on many machines. If properly designed these brakes are excellent, and besides being cheap to manufacture and replace they carry out their allotted functions admirably. The internal V type has become the most popular, as it does not interfere with wheel removal. One of the best examples of the correct application of internal V brakes was to be found on both wheels of the Sunbeams and the rear wheel of the Triumphs. Contracting band brakes were fitted to the Beardmore-Precisions and to the Triumph front wheel and Indian rear wheel, but the most noticeable feature as regards brakes lay in the enormous increase in numbers of internal expanding brakes. The Webb internal expanding front brake was a very popular fitting, and rear brakes by the same makers were to be found on some machines—undoubtedly it was time that up-to-date brake specialists should make their appearance in the motor cycle world.

Quite a large number of motor cycle manufacturers have designed their own expanding brakes either for the rear wheel only or less commonly, as in the case of the A.J.S., for both wheels. Amongst those who fitted at least one expanding brake are Norton, Indian, Velocette (2), A.J.S. (2), New Imperial (2), Coulson



DUPLEX AND LOOP FRAMES ON T.T. MACHINES.

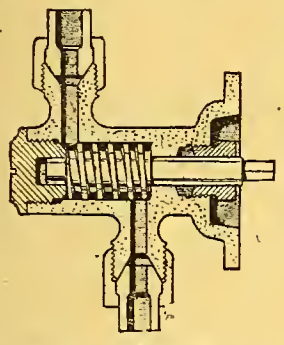
Scott. New Imperial. Cotton.

**Technical Aspects.—**

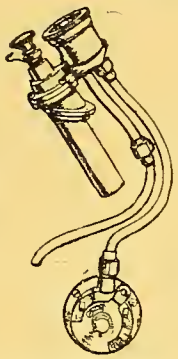
(2), New Hudson (2), Diamond, Sun-Vitesse, Levis, Francis-Barnett, Invicta, New Gerrard, Cotton, Scott, N.U.T.

Other types of brake which have proved to be most effective and do not interfere with wheel removal are the Rudge shoe type operating on large diameter flat drums, and the Douglas external V type. The importance of good front wheel brakes should not be under-estimated; there was a time when badly designed "horse-shoe" types brought front brakes into disrepute; but a check on the front wheel, provided it is not too violent, is most useful under any circumstances, and the makers who entirely dispensed with front wheel brakes in the T.T. were few and far between.

A new era as far as motor cycle racing is concerned was inaugurated by the A.J.S., who, for practice,



Section of the Showell pump showing the simplicity of construction.



The Best mechanical oil-pump with the new hand-pump and sight feed.

coupled both front and rear brakes to a single operating pedal. This system was discontinued only on account of a fault which is not inherent to the system but only to the application thereof, Dixon's Indian being fitted with three interconnected brakes.

**Frames and Fittings.**

An overwhelming majority of frames were of the curved top tube type, and though the straight top tube is mechanically the sounder job, there are certain advantages in the curved tube, while the disadvantages can be overcome by a matter of an ounce or two of extra weight. One is apt to consider that the curved frame tube is liable to weakness, but Mr. Henderson is no mean engineer or metallurgist, and is not likely to encourage faulty frames; yet the Sheffield-Henderson exhibited some fantastic curves in the lower tank rail. New Imperial and Indian machines represented the loop frame, a construction which has many good points, since it provides rigidity and relieves the engine from stresses which it is seldom designed to absorb. All-steel construction is making steady progress, and Rudge and Beardmore-Precision should be mentioned in this respect, though O.K.-Junior, Raleigh, Douglas and others have many steel lugs in their construction.

With the exceptions already mentioned, and with the addition of the Cotton which appeared to hold the road admirably, there were no frames of unorthodox design. The Scott, of course, is unusual in this respect, but its admirably scientific construction has been with us so long that one is apt to overlook its merits except in the Isle of Man, where the excellent weight distribution renders the machine ideal for the course, and consequently for touring purposes.

Even some of the best-known concerns have something to learn as regards the effects of frame design on steering; one large and important entry found it necessary to change their frames a few days before the race, while another would have done better if they had followed the example.

The two-lever carburetter retains its position as a standard fitting, though single-lever Cox carburetters were fitted to quite a number of machines. Amac carburetters secured most of the winning places in Junior, Senior, and Lightweight events, though Davison's Levis had a new Senspray. A. H. Alexander's Douglas had a separate two-lever Amac carburetter on each cylinder.

Large tyres have not gained much ground for racing purposes, though a few 26in. × 3in. and 700 × 80 mm. tyres were to be found.

**Ignition.**

The high-tension magneto was universal, Scotts using a two-spark instrument; and some sort of nail-catcher was usual. The Isle of Man is not the place to study improvements in mudguard design.

Plug trouble was comparatively rare in spite of the trying conditions, K.L.G. plugs securing the lion's share of awards. The difficulties of the plug manufacturer can be more fully realised when it is stated that a well-known make of engine started practice with a 7-1 compression ratio.

The Easting windscreen, which first made its appearance in the 1921 event, was fitted by quite a number of riders, and should be of service in affording protection from dust and flying stones.

Something of a novelty also appeared in the form of Miracle oil, a high flash-point oil, a small quantity of which is mixed with the petrol in order to lubricate the valves, and the upper portion of the cylinder. It is early yet to make a definite pronouncement on the effects of this mixture, but certain it is that many team managers and riders were convinced that it had decided advantages, and most of the leaders used it.

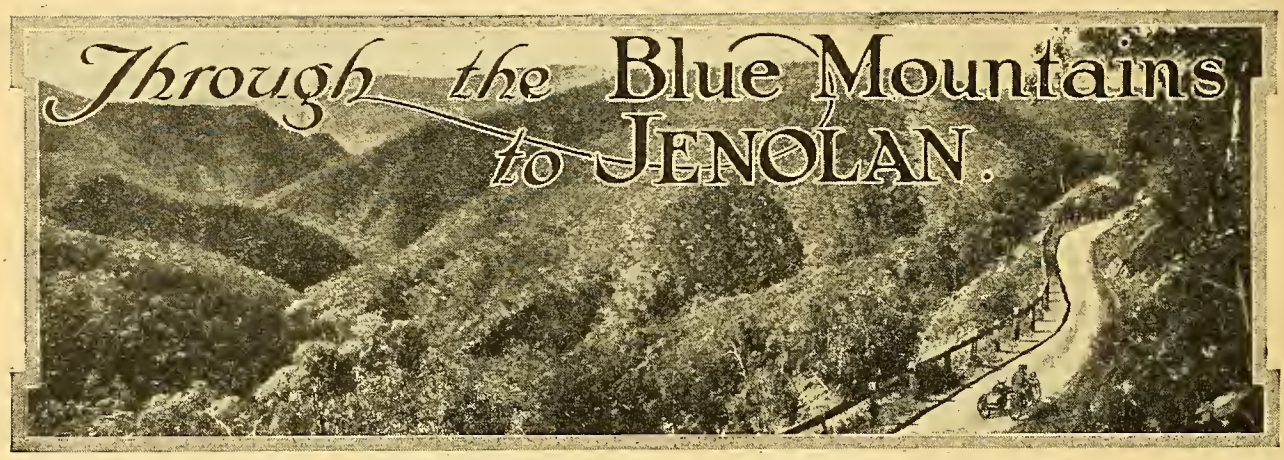
As regards the actual winners, the Lightweight race was won by a two-stroke, with an o.h.v. single second, and another two-stroke third. The Junior event for the third year in succession developed into a duel between A.J.S. and Blackburne engines, J. Thomas's Sheffield-Henderson with the latter engine lying third to two of the former make, while the first six places went to o.h.v. engines. Finally, the Senior honours were divided between all types, side-by-side valves first, o.h.v. second and two-stroke third.

It is perhaps interesting to examine the different type of engine to finish in each of the three events. The lists below are instructive:

| | Lightweight. | Junior. | Senior. |
|---|---|---|---|
| Started ... ... | 33 | 36 | 67 |
| Finished ... ... | 14 | 16 | 22 |
| Overhead valves... | 5 | 11 | 5 |
| Side by side ... | 3 | 2 | 13 |
| Two-stroke ... | 6 | 3 | 3 |
| I. over E. ... ... | | | 1 |

In studying the weights of machines published in our last issue, it is necessary to remember that fuel and oil alone may total some 25lb., while spares and tools may easily account for another 5lb.

# Through the Blue Mountains to Jenolan.



A fine panorama showing how extraordinarily well wooded are the Blue Mountains of Australia.

## A Tour to Australia's Counterpart of the Cheddar Caves.

*There is nothing of "the bush" in this account of a holiday trip in New South Wales. The writer refers to tourists' cars, garages and hotels, not to mention turbine-generated electric light.*

OFTEN had I longed to tackle a fairly long and interesting run on my old but trusty 3½ h.p. Singer, but time had not permitted. At last, however, I had four days to myself, and careful arrangements were made for a trip to the Jenolan Caves—a round journey of 251 miles.

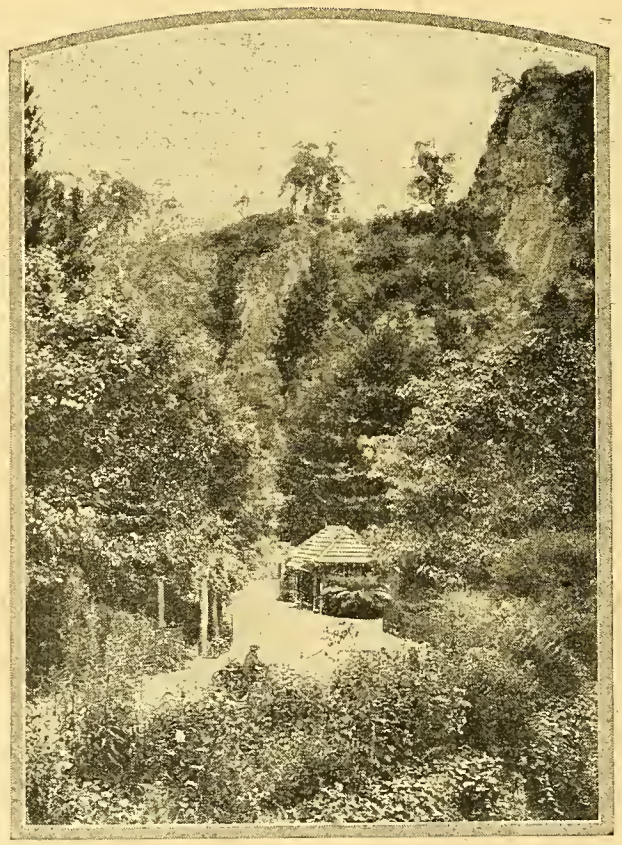
I enlisted the sympathy of another rider, who owned a 2¾ h.p. Douglas, and we planned to leave home on a Saturday morning at six o'clock. The spares we carried consisted of one inner tube, a repair outfit, spare belt, and two plugs.

Near Sydney the roads were very greasy, but as we cleared the suburbs we came upon roads which had evidently not experienced rain for several months, judging by the dust we raised.

Very bad roads were encountered near Parramatta. There were some bad hills, and a surface resembling ploughed ground, which, combined with the head wind, made it extremely hard for the machines.

### Into the Mountains.

We were now beginning the ascent of the Blue Mountains. Lapstone Hill, near the commencement, is one of the worst climbs in the State, and caused me to drop to the bottom ratio of my N.S.U gear; the 2-speed Douglas followed suit. The surface was very loose, and it entailed some careful riding to avoid spills. Notwithstanding, after running nearly red-hot, we managed to reach the top, where the wind soon cooled our engines.



Looking towards the Grand Arch from the Caves House.

Here the road followed the railway track, and, observing a train, we accelerated quickly and raced alongside. We had an advantage in that we could climb faster, and consequently soon lost sight of the hard-worked locomotive and its burden.

After covering fifty miles we arrived at Springwood, a delightful tourist resort on the Mountains, and stopped to refresh the inner man. It had taken us four hours to cover the fifty miles, but delay had been caused by the bad roads, and the last twenty miles had been one long continuous climb.

### Over 3,000ft. above Sea Level.

Once more in the saddle, we opened up, and although we encountered a number of loose patches on the road, we made fairly good time into Katoomba. We were by this time 3,336ft. above sea level, and had climbed to that height in the last twenty-seven miles. So far I had only been in low gear

**Through the Blue Mountains to Jenolan.—**

for about two miles, but the Douglas rider had not been so fortunate.

Although beautiful, Katoomba could not detain us beyond the time spent in filling up at a garage pump, for dinner was awaiting us at the hotel at Mount Victoria only eleven miles away.

### Four Miles of Downhill Road.

Then we set out for Jenolan over the most tortuous and steepest road I have ever seen. The surface was excellent, and, trusting to our brakes to act satisfactorily, we descended at a fast rate. Having dropped 1,500ft. in four miles, we came to an excellent four-mile stretch of level road and then hills again.

A mile or so to the rear we could see six cars loaded with tourists for the Caves, and the dust they were raising was great. We decided to keep ahead if we could, so we opened out.

The next fifteen miles were undulating, and then came a short, sharp rise. We were now on the summit of the famous "Five Mile Hill." At the side of the road is a notice board informing drivers of vehicles of certain hours when no vehicle is allowed to descend, as all traffic would then be ascending the "hill," and there is not sufficient room for two vehicles to pass.

This "hill" drops 2,000ft. in five miles, and ends with an exhilarating rush through a natural tunnel in Mount Jenolan. At the bottom we came to what appeared to be a big tunnel, but what was really a huge hole right through the mountain, through which the road passed. This Grand Arch, as it is called, is 450ft. long, 70ft. high, and 180ft. wide.

We were thankful to reach Jenolan, and so after garaging our steeds we entered the magnificent Caves House.

The dinner bell soon rang, and so to the dining-room *via* an electric lift. We were dumfounded with the magnificent meal placed before us, and could hardly believe that we were 115 miles from Sydney, with the nearest house fifteen miles distant. The whole of the surroundings of the Caves House, the house itself, and the interior of the world-famous limestone caves, are lit by electricity produced by water turbine.

We stayed there Sunday and Monday inspecting the Caves, and at six-thirty on Tuesday we departed, and, through a mountain mist, commenced our 2½-mile climb up the Oberon Hill out of the Jenolan Valley.

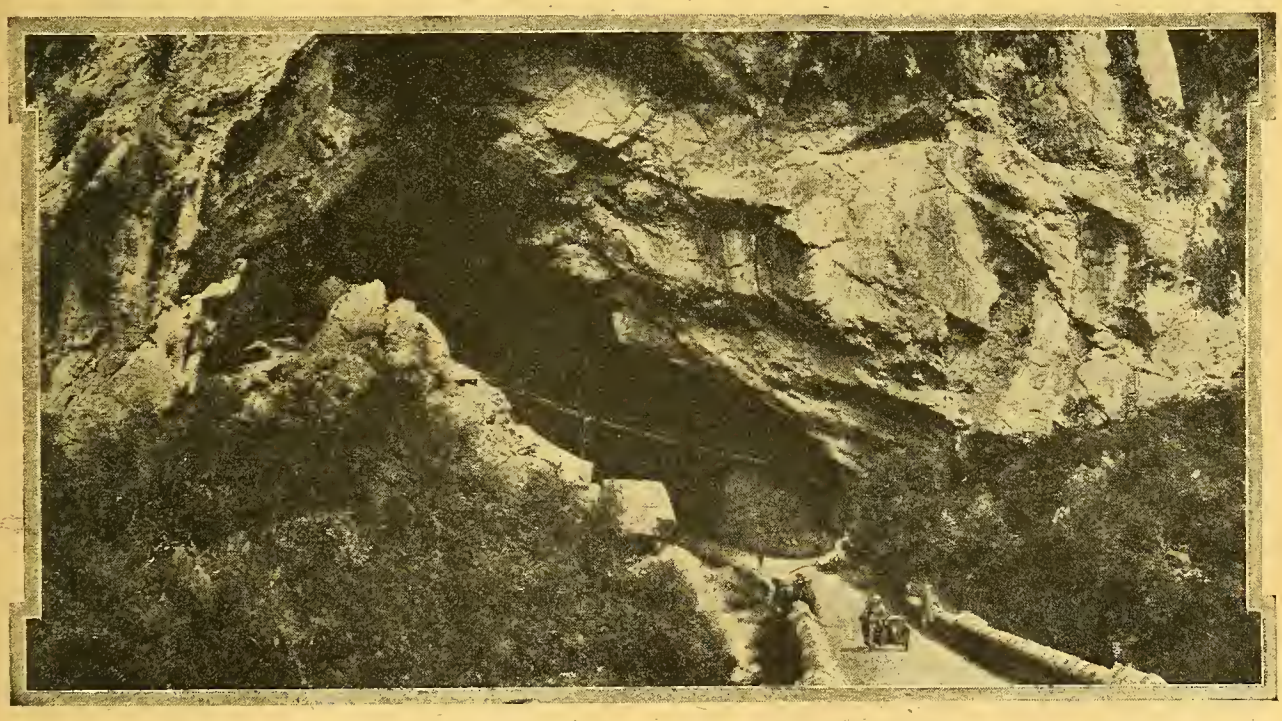
We then passed over good and fairly easy roads until about twenty-five miles from the Caves, where we struck a continuous descent of five miles. Another two miles and we had reached Tarana.

The next eight miles were covered in 25 minutes. Very indifferent roads constituted the nineteen miles into Rydal, where, as it was but six miles to Mount Victoria, we decided to continue and have our lunch there at the hotel.

We had now 74 miles to cover before we reached home, but as the greater part was down-grade, we did not mind. We arrived home at 6.45 p.m., after having covered 74 miles since half-past 1, and altogether 130 miles since 6.30 a.m

Such was the end of a glorious ride of 251 miles which is unsurpassed in beautiful scenery and yet which is very seldom tackled by motor cyclists.

SINGER.



THE GRAND ARCH, 450ft. long and 70ft. high, was, during the course of ages, cut through the solid limestone mountain by the running waters of the creek.

# A PRESSMAN'S MANX WEEK.

## Things Seen, Heard and Considered during "The Motor Cycle" Man's Busiest Days of the Year.

By "ROAD RIDER."

NORMALLY I wear a starched double collar—rather high. On the morning when I leave the office for the T.T. I don a soft collar, rather low—for obvious reasons. Normally, as my wife tells me, I gobble my food. In America there is a certain Professor Fletcher, who holds that we should all live to be 100 years old if we chewed every mouthful of food thirty times. On 363 days of the year I ignore his doctrine, but on the Monday before the T.T. and again on the Friday after the race I am the most punctilious of Fletcherites—for obvious reasons. Shakespeare says :

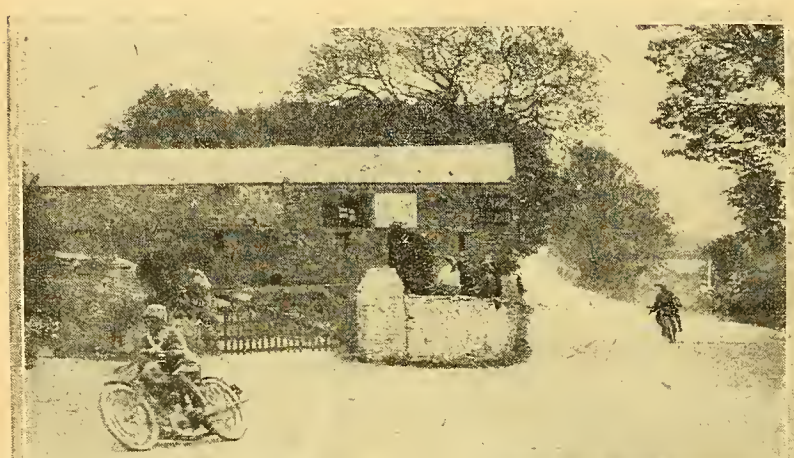
> "There is a soul of goodness in things evil,
> Would one observingly distil it out."

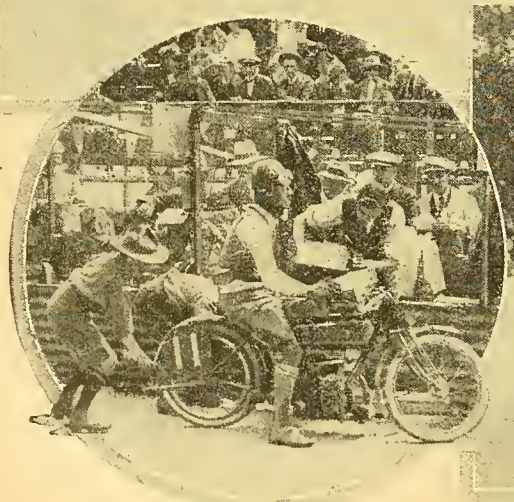
For many years, having a queasy stomach, I have wondered what the "soul of goodness" in sea-sickness might be. This year I solved the problem. Our roads are vilely pot-holed. We grumble and grouse about them. The sea also is full of pot-holes. Road pot-holes are shallow and stationary. Sea pot-holes are deep and in a state of constant motion. The purpose of sea-sickness, therefore, is to make discontented motor cyclists more satisfied with the comparatively innocuous undulations of the roads.

Thus prepared in body and mind for the voyage, I started for the T.T. on an o.h.v. machine. At the tenth milestone, where the road rises sharply, my engine missed three consecutive revolutions. It chipped in again for ten more, and then stopped. I gingerly extricated a red-hot K.L.G., which appeared O.K. Rule of thumb methods, I admit, but they indicate my simple trust in the reliability of my engine : and I had certainly been over-oiling. I went round to the other side, and noticed that my exhaust valve was opening but not shutting. In other words, the engine could force it down, but a mere spring could not return it. Irreparable, too.

### Assorted Transport.

I went sadly into a near-by building, which proved to be a poorhouse, and 'phoned for a taxi. Presently there arrived a Ford—of the most decrepit, as our French friends would put it. So by the slow but reliable train to Liverpool. Then the s.s. *Mona's Isle*. And finally a horse tram to my Douglas hotel. Truly a quaint assortment of vehicles for one journey.





(Top) At Ballacraine corner. F. C. North (249 c.c. O.K. Junior), who was sixth among the lightweights, followed by A. Booth (348 c.c. Massey-Arran). (Left) G. S. Davison (248 c.c. Levis), winner of the Lightweight Race, receiving attention from the boy scouts and the petrol replenisher. (Right) S. Woods (348 c.c. Cotton), on the Ramsey hair-pin. He finished fifth among the Junior entrants after riding magnificently in the face of a handicap that probably lost him the race.

**A Pressman's Manx Week—**

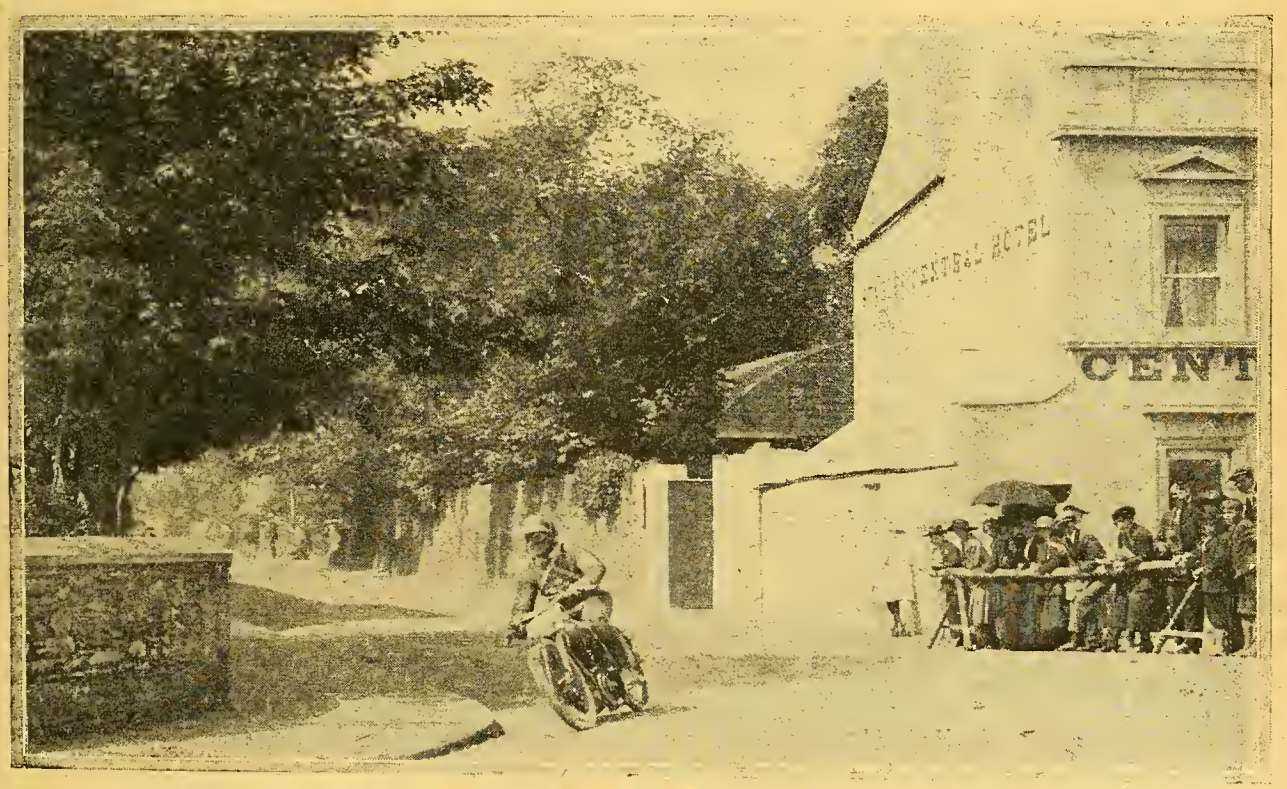
The outward voyage safely astern of me—ugh, how I loathe all those nautical terms and their associations—I enjoy the Island. One meets everybody who is anybody in the motor cycle world. They all yarn to one. Thuswise. You meet Smithkins, who sells sparking plugs. He tells you confidentially that his 1922 plug will positively stand up in the Conx engine (a notorious plug devourer). Then you meet Mr. Conx, and congratulate him that his team have at last solved their plug troubles. To your amazement he foams, erupts, explodes. It is true his men are lapping in forty-one minutes, but they *could* lap in thirty-five minutes if the plugs didn't melt as soon as they opened their throttles.

The next person you run into is Brownjohn, another plug merchant. Partly to rag him, partly on the off chance of his helping Mr. Conx, you whisper in his ear that the Conx boys are in sad trouble with plugs. Brownjohn laughs consumedly, and slaps you on the shoulder in his hearty fashion. "Don't you believe it, old chap!" Then, after a furtive glance right and left, he whispers confidentially. A fortnight ago he gave the Conx team plugs which would freeze in the flame of a welding blowpipe. The Conx trouble isn't plugs at all. It's the Jones and Jones valve. They have to use it because the Jones brothers are on the Conx board of directors. But, as he needn't tell me, the Jones valve is as brittle as a carrot and as heatproof as tallow. Then you espy Fitzwilliam, a carburetter expert, sulking in a corner of the Sefton bar. You discuss the Conx chances on the great day. He is roused to a cold, angry animation. "It's their carburetter, old man! They *will* use it, because their managing director owns the patent. It simply chucks great blobs of wet juice into the cylinder, and sluices out all the lubricant. I could put 'em right to-morrow. It's heart-breaking, simply heart-breaking. Such fine lads, too. And so keen. Robbed of victory by their bosses' financial affinities." Finally you call at the Conx camp. The riders don't display any very exuberant *joie de vivre*. You try to comfort them with reliable stories of the secret adversities of their chief rivals. At last their best man says, "Well, there's only one thing the matter with our buses—*they're too darned slow!*"

Truth, says an Indian proverb, lives at the bottom of a well. I doubt if anybody's bucket has a long enough rope to reach to the bottom of the T.T. well.

**More and More Power.**

Perhaps my main observation in Manxland was the quite extraordinary power developed by the modern hot-stuff engine. I myself own an engine with a Mary Ann punch capable of just about 70 m.p.h. When it is running slowly in neutral, shortly after receiving a charge of oil, a haze of blue vapour lazily exudes from the open exhaust pipe. But when its Manx cousin ticks over under similar conditions, a fat clot of stinking asphyxiation is violently projected in a solid lump to a point 20ft. in the rear of the machine. Which shows how engines are getting on. Especially the baby two-strokes. A few years ago the valveless type



At the right-angle bend entering Ramsey. G. W. Shepherd (348 c.c. Edmund), who finished eighth in the Junior race.

**A Pressman's Manx Week.—**

of 250 c.c. engine was extremely woolly, a rickety, anæmic relation of the poppet valve type. This year it beat them, and its performance was superb. Naturally, these wee racing engines are not in all cases comfy to sit over. But their detuned touring editions are becoming extraordinarily capable. As a spectacle and in sporting interest the Lightweight event is nowhere by comparison with the Junior and the Senior, but I fancy it will exert an even larger influence on the future of the sport and the industry. I foresee the day when perfected 250 c.c. engines will fulfil all ordinary touring needs, and the Manx week is accelerating that consummation.

### The Three Races Compared.

The most careless observer must note profound differences between the three T.T.'s. The Baby event is still an "*engine*" race. Almost any rider—even an ordinarily capable scrap-loving amateur—can get round the course fast enough to win, *if* his engine is good enough. The Junior is a "*man and engine*" race, for only a first-class rider can conquer the tempts and threats of that awful lap with the requisite blend of devil and restraint, whilst only a magnificent 350 c.c. engine can do its 80 m.p.h., accelerate like a projectile, and display the durability of a doormat. The Senior is a "man" race. Oh, I know well enough that 37½ miles of twists and hills, taken at nearly 60 m.p.h., rack both engine and frame to the very limits of endurance. But, nevertheless, the real emphasis is on the *man* in this event. At least half of the entry cherished no fond dreams of finishing within 30 min. of the winner. "I am far too scared!" they said. All they wanted was a comfortable blind at their own pace; if they could crowd in six laps before the course was opened, so much the better. If not, they had for once savoured the unique sensation of going as fast as they had a mind to, with no police or traffic to worry about. Perhaps six men nourished genuine and secret hopes of victory. So if I intended to market a machine, and a T.T. victory was a definite part of my sales policy, I would not waste brains on designing the machine or money on producing it until I had found the *man* to ride it. Bennett, Dixon, Wood, H. R. Davies. One or two others. Or some precocious unknown youngster, possessing equal calibre, but not yet known to fame. Sixty-seven men started in the Senior Race. I suspect we might mount fifty of them on an imaginary machine 25% better than the winning Sunbeam in every racing factor, and yet watch it being thoroughly well beaten.

Nevertheless, an amazing lack of common sense is noticeable in details. Why start men with vital parts sure to be lost if a solitary unlocked nut comes adrift? Why spend thousands on competing when your junior tester could prove to you that nothing but humiliation can result? Why compete without taking any of the obvious and rational precautions against tyre trouble? Why start without verifying your oil consumption? Why make depot stops after the second and fourth lap, when a single stop after three laps would suffice? The extra stoppage entails a loss of at least half a minute nett, allowing for weakening of acceleration and climb by dint of the extra weight carried, and some year soon the race will be won and lost by less than 30 sec.

Or, again, it was fairly common knowledge last January that a maximum speed of 85 to 90 m.p.h. would be needed to win the Senior Race. Lots of firms entered without utilising Brooklands to discover what speeds their engines could produce, or even how their valves and pistons and plugs stood up at even 70 m.p.h. A marvellously casual habit of taking chances was discernible in many camps.

### Next Year?

There are many weird suggestions afoot for the 1923 T.T., some good, some bad, some indifferent. Three, at least, deserve attention. With plenty of time available the problems of a real Amateur race might not prove quite insuperable. If such an event can be organised, the reformers who wish to give large and small firms an equal chance by limiting entries in the Open race to three machines of each make will find their path eased. Then there are those who consider that in 1922 too much depended on the man and too little on the engine. Their prescription is a 500 mile T.T. with a change of driver every third lap. We shall see.

The return journey? Oh, yes. I crossed in company with one of those incredible persons who owns a small yacht *for pleasure!!!* At breakfast, in Douglas, he kept pointing out the "magnificent surf" in the Bay (as if I couldn't see the infernal surf through the coffee room window, and as if I hadn't listened to its roar all night). I stood things pretty well till we were half an hour out from Douglas. Then he crashed a great fist on my back. "I say, old man, come and watch these gorgeous billows tumbling on the port bow!"

* * * * * *

"Those billows" were not all that tumbled.

## HARDENING AND SOFTENING.

THE other day I saw an amateur motor cyclist trying to reduce the size of a nut, which was tapped with the correct thread for the job in hand, but projected too far. He was working away with a file and sweating profusely, but making no impression on the nut, which had been case-hardened. Needless to say, the nut was easily softened by heating it red-hot and allowing it to cool off; the alternative was to grind off the surplus metal without first softening the nut; filing, of course, was perfectly hopeless. If re-hardening is necessary for any reason, the part may be hardened by raising it to a red heat and cooling it instantaneously by plunging it in either water or oil, providing the hardened skin is not entirely removed. Iron parts may be case-hardened by heating them red, covering with a case-hardening compound (purchasable at any ironmonger's), re-heating, and cooling off rapidly in water. Discretion must, of course, be observed in annealing and hardening special steels designed for peculiar duties. ROAD RIDER.

# THE BONUS BUGBEAR—SUBSIDY SCANDALS.

## An Interesting Sidelight on one Hidden Aspect of the T.T. Races.

ALL our readers are familiar with the two chief aspects of the T.T.—namely, its sporting eminence as perhaps the most thrilling athletic contest of the year, and its technical importance as a grim test of design, material, and workmanship. It has a third side, which is generally kept in the background so far as the general public are concerned. The entire motor cycle trade is intimately affected by the T.T. The shares of the companies which manufacture the successful machines are instantly quoted at higher figures on the Stock Exchange. The sales of those companies' machines increase. Excellent advertisements accrue to every item of the equipment of the winning machine—tyres, oil, petrol, magneto, sparking plugs, chains and belts, carburetters, etc., etc. An advertisement is always worth paying for, and the representatives of the firms which manufacture motor cycle requisites strain every nerve to induce as many entrants as possible to use their commodities. Where such keen competition exists, a system of subsidies naturally follows. This year, for example, at the beginning of the practising, the tyre companies were offering a cash award of £250 to any rider who won his race on their tyres. Every entrant was promised so much in cash for every mile he covered in the race on tyres of this make or that. The different tyre firms began to bid against each other, and by the start of the race the riders of the winning machines stood to receive £1,000 from the makers of certain tyres, whilst every starter could get 2s. 6d. per mile. Some tyre companies abstained from this crazy auction, but the representatives of other firms toured the various "camps" in the island daily. On Monday the Blizzard team practised on Speedster tyres before breakfast, but by lunch time they had all been tempted by a higher bid to substitute Standing tyres. On Tuesday another bid produced a further change to a third make of cover. Simultaneously a similar process was occurring with half-a-dozen other proprietary articles. Acrimonious scenes occasionally occurred at hotels and depots. Not until the machines are actually placed in the custody of the A.C.U. does this unseemly scandal of bid and counterbid finally terminate.

### Pointers.

The folowing comments on the practice seem to the point:—

1. The best riders loathe it. These notes are inspired by a previous winner.
2. Many makers of motor cycle equipment will not stoop to these methods. Their specialities are consequently absent from the race, but may be equal in quality to those used by the winner.
3. The cost of these subsidies is ultimately abstracted from the pockets of the general public.
4. Similar practices killed cycle racing as a sport twenty years ago, in spite of strict laws on the amateur question, laws which are not applied to motor cycling.

There is only one possible argument in favour of this un-English, unsporting, and unpleasant practice. It assures a substantial reward for the winner, who might receive little compensation for his skill, toil, and risk if he were left at the mercy of the firm who engaged him, particularly if he chanced to be an unknown man. The public would wish every T.T. winner who is not a man of large private means to pocket upwards of £1,000, as he does to-day, but they would prefer him to receive this sum by better channels.

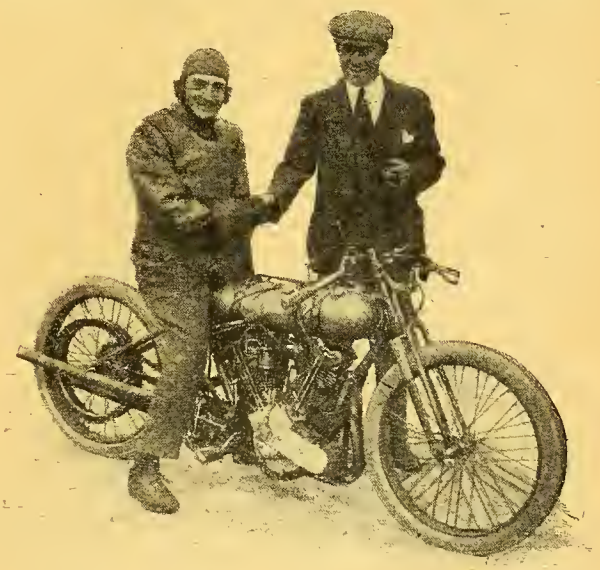
### Can a Remedy be Found?

Remedies are not easily found. One proposal has been that the Auto-Cycle Union shall compel every competitor to specify at the date of his entry complete details of his equipment. This plausible scheme overlooks a real problem. Now and then every accessory maker may be hampered by a batch of inferior stuff coming through his works—a rule which might force a good rider to use an inferior magneto could not be accepted.

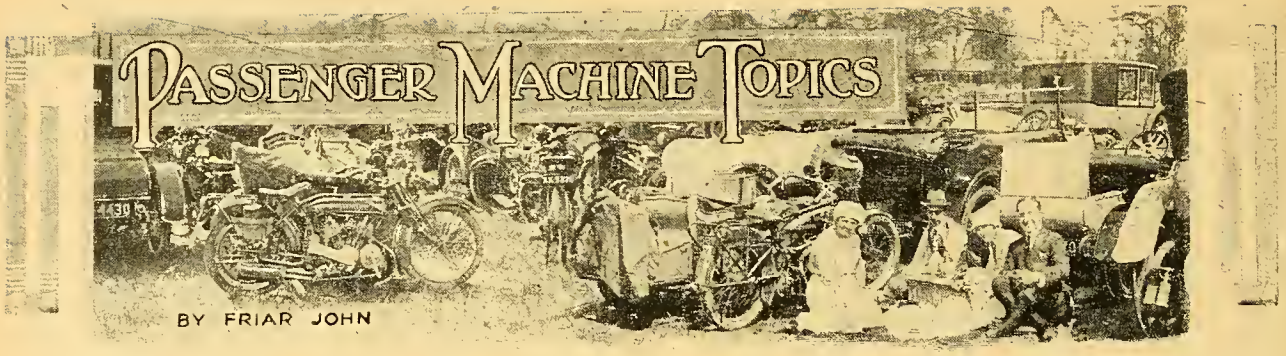
A second proposal is that the manufacturers of the machines should decide what equipment is to be used; should receive any subsidies paid by accessory firms; and should remunerate their riders adequately.

If the trade and the A.C.U. can put their heads together and eliminate these unpleasant customs before 1923, they will do the race a great service. This year the chaffering has been far worse than in any previous event. Many of the riders and some of the offending firms are sick of it.

B. H. D.



For many years Col. R. N. Stewart has been a regular competitor at Brooklands, and, if his easy win in the recent South Midland Centre meeting is any criterion, his new mount, an eight-valve Anzani-engined Trump, should cause his name to occur with some frequency among the prize-winners of the future. Mr. H. H. Hagens, the designer of the power unit congratulating the successful rider.

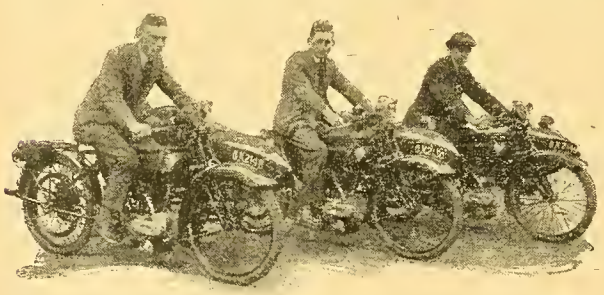


Besides offering the excitement of racing, Brooklands provides an admirable venue for a picnic. A typical paddock scene on a hot afternoon.

## The "Road Sense" of the Novice: Sidecars to Carry Six Passengers: A Note on Sensations, Speed and Otherwise.

I WONDER whether after all that "road sense" which the experienced motor cyclist prides himself on possessing does come from prolonged experience, or whether it is second nature, so to speak, to some people? Last week, for instance, I taught a man who had a leg amputated to ride a sidecar. After two lessons of about 15 minutes each, he tackled my 6h.p. outfit alone. The next day he took possession of a 4h.p. Douglas sidecar and persuaded a confiding youth to accompany him in the sidecar, and managed a 20-mile journey without incident. This man had never even ridden a bicycle or driven a car, yet he never once swerved or lifted the sidecar wheel. He took to sidecar driving like a duck to water. Yet another individual may ride for years and always remain a duffer.

WHERE is there most room for experiment in sidecar design? New ideas continue to blossom forth at Olympia each year, even though the height of perfection had apparently been reached at the previous show, but no outstanding features or revolution in design has startled us lately unless it be the amateur post-impressionists and cubists who mistake their sidecar bodies for canvases. Take the question of springing: there are vastly *more* well-sprung sidecars on the market to-day, but the *majority* are not much better sprung than were the best in 1914. I think this can be said of cars also, and would point to the fact that springing can advance to a certain point and no further unless the size and weight of the vehicle is increased. Yet one may contend that Alfred Scott has evolved a triangulated vehicle which surpasses all sidecars in comfort so far as the springing is concerned. Personally I think it is in the direction of suspension that the average sidecar needs the most improvement.



Speedy but economical transport was required by Messrs. Winter, Ltd., Confectioners, Birmingham, for their travellers; vehicles which could be started easily hundreds of times a day without fatigue and which could carry samples were essential. All these requirements are fulfilled by the 350 c.c. four-stroke, and the three all-chain-drive outfits selected are shown.

WHEN the B.S.A. screen, which gives protection to the rider, first made its appearance, quaint were the comments it inspired. But, in spite of the almost irrepressible desire one has to paint two golly-wog eyes on the sinister-looking shield, there are attractive features about the fitment. One has only to ride about 50 miles against a wet and easterly wind to appreciate its worth. A criticism that I refute emphatically was one passed by an observer who, on seeing a similar contrivance, said: "Ah! another effort showing how far short is the sidecar of what a cheap passenger vehicle should be." This statement infers that the sidecar has never been the ideal cheap passenger vehicle, and that these shields simply emphasise its shortcomings. Perhaps the shield does draw attention to the obvious want of protection for the rider, but the sidecar still remains the "ideal cheap passenger vehicle" in spite of its so-called shortcomings. There must be, a mysterious and subtle attraction about the sidecar that one cannot well analyse or the query below would never have been addressed to me.

AS a hardened sidecarist I can quite understand Mr. H. W. A. Mason's desire to use a sidecar in preference to a car. But "six up"! Read the following extract. Mr. Mason will not mind my making public his requirements, I'm sure.

"Gold Coast Govt. Rly.,
"Accra, British West Africa.

" . . . . At the end of 18 months, I come to England for a six months' leave, during which period I generally use a motor cycle combination for self and family.

"What I really want is a good motor cycle combination capable of doing the work of a car, but I want one with sufficient room to accommodate myself as driver, my wife and four children as passengers, ages respectively 14, 13, 10, 5, for week-ends and during any holidays the kiddies may have during my next leave. . . .

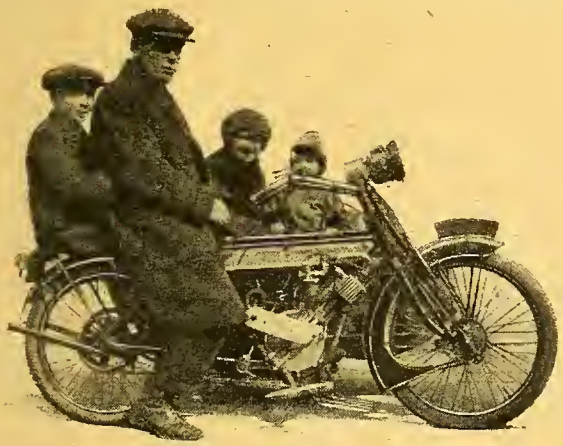
**Passenger Machine Topics.—**

". . . . In the event of you not thinking the proposition advisable, I am afraid I shall have to turn to a car, although I very much prefer the sporting side of motor cycling."

It would be instructive to hear what readers say on the subject.

SEVERAL outstanding performances with sidecars have been made recently, but comparatively little comment has been passed upon them. Sibley's performance in the Scottish trials was one. He piloted a 499 c.c. Rudge sidecar (the smallest sidecar in the trial) up and down the dales and across the mountain passes, yet finished up with a gold—a fine ride, and a tribute to the engine and Sibley's judgment. Another ride worth more than passing thought was I. P. Riddoch's ride at Brooklands on a 998 c.c. Zenith and sidecar. He averaged 79·83 m.p.h. for 8½ miles, thus setting up a record for the distance. Riddoch is a member of the Oxford University Motor Club, the only amateur to hold a Brooklands record. Eighty miles an hour!

ONE of these days I hope to try one of these phenomenal sidecar outfits, but not at 80 m.p.h. The sensation of slipping along even at 60 m.p.h. must be supreme. Yet a colleague who recently attained the staggering speed of 140 m.p.h. at Brooklands on one of the fastest cars in the world said he had no particular sensation to record. I suppose after all one gets more sensation on the road, especially at week-ends on routes abounding with intersecting roads. There one meets all kinds of different and indifferent drivers, not to mention the *inconsiderate* lorry man without a mirror, and is there anything more aggravating than being imprisoned in the dusty rear of one of these juggernauts for mile after mile? That is where the soloist scores: he can shoot past the brutes in the width of a razor's edge—almost.



Given a soundly designed and well-made outfit, depreciation, if care is taken of the machine, need only be negligible. This 1909 P. and M. is still in regular use, and a moment's calculation of its probable cost and present-day value will show that depreciation cannot be more than a few pounds yearly.

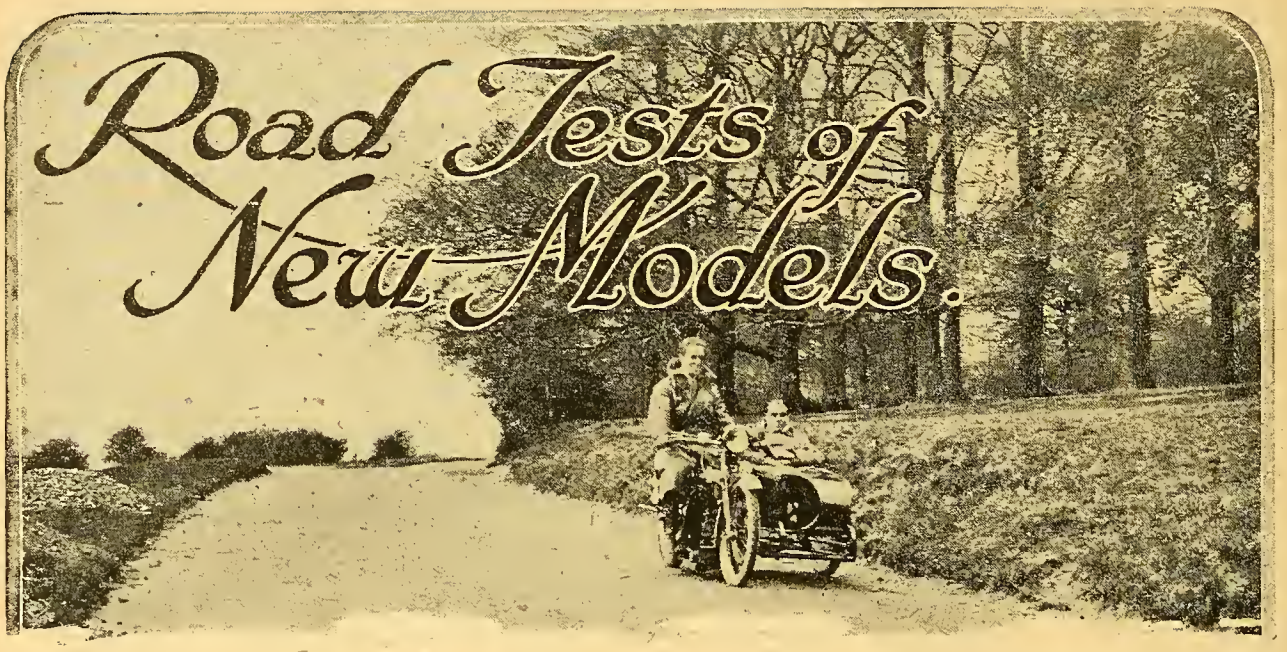
In the cool of the plantation. This Enfield passenger must have picnicked before, for she realises the advantage of taking the loaf and knife in preference to sandwiches cut at home.

REVERTING a moment to the topic of sidecar speeds, I should imagine the 1922 P. & M. has astonished many who have always, and quite rightly, considered this make an ultra-reliable but comparatively slow machine. Although my test was not over long Welsh hills with a heavily loaded sidecar—a ride more than once undertaken on a 1912 pattern—the model I rode was fast enough to whizz the indicator round to 45 m.p.h.

THE signposting of many cross roads round about the west and south-west of London is truly remarkable. It is so good generally, and yet there are road junctions quite bare of any directions. Of course, at all the important points there are posts, constables, or scouts, but maybe a mile or so farther on one will be in a quandary. In many cases either direction boards are missing altogether or else they are placed in an obscure position. I recently saw three sidecarists hunting for a signpost in Surbiton to direct them to a particular destination. Ridiculous to the inhabitants, perhaps, but not so simple to strangers. Of course, there is seldom any real difficulty; my grouse is in having to stop and inquire the way so frequently.

THIS little tip for renovating faded upholstery has proved useful. Get a bottle of Indian ink and a small bottle of waterproof drawing ink near to the colour of the leather or pegamoid, as the case may be, mix a little of the black with the coloured ink, otherwise it will be too vivid, then apply with a cloth, rubbing evenly all over the faded portions; when this is thoroughly dry, finish off with polishing wax.

# Road Tests of New Models.



The Chain-driven Zenith-Bradshaw Sidecar Outfit.

*SPECIFICATION.*

| | | |
|---|---|---|
| *ENGINE: "Oil-cooled" flat-twin, 68 × 68 m.m. = 498 c.c.* | *GEAR BOX: Sturmey-Archer three-speed, clutch and kick starter.* | *CARBURETTER: Amac* |
| *TRANSMISSION: ½in. chains.* | *TYRES: 26 × 2½in.* | *FORKS: Druid.* |
| | | *PRICE: £111.* |

WHEN first introduced the oil-cooled Zenith-Bradshaw excited somewhat of a stir in motor cycle circles. Mr. Bradshaw is nothing if not original, and the adoption of his engine by Zenith Motors, Ltd., proved that his efforts had been appreciated by manufacturers who had long been wedded to engines of standard design. Full descriptions of this oil-cooled flat twin have already appeared in *The Motor Cycle*, and this article therefore deals with the behaviour of the machine on the road, pulling a Millford sidecar chassis fitted with a comfortable semi-sports body—an entirely new rôle for this model.

### On Two Surrey Test Hills.

The first part of our test consisted of a journey comprising two of the principal Surrey test hills, one a well-known main road hill of ordinary severity, of which the worst gradient is about 1 in 9, and the other a stiff hill culminating in a gradient of 1 in 5, approached by a sharp corner. On this occasion a passenger was carried.

From the very outset it was clear that the machine under our charge was designed by a practical rider. Everything was to hand; small details such as the position of the control levers and pedals had been carefully studied so that one instinctively did the right thing even though the machine was quite strange. Its excellent steering was also particularly noticeable, and so was its flexibility, for there was a good deal of winding road work to be accomplished before the Portsmouth road was reached at Esher. Thereafter an excellent turn of speed was kept up until the fork leading to Newlands Corner.

Passing through West Clandon and carefully crossing the Leatherhead-Guildford road, the outfit was speeded up to take the first "step" up Newlands Corner. This occurs suddenly round a bend, and is out of sight until actually tackled. The engine made a splendid climb on second speed until the gear lever dropped out of engagement, which necessitated a few yards on first, when almost immediately afterwards second was again engaged and the climb was finished on top in magnificent style.

After taking photographs the long down grade towards the Silent Pool was taken under easy steam, and next the hairpin bend on to the road approaching Coombe Bottom was negotiated with certainty, as was the 1 in 5 portion following.

### Good Pulling Powers.

The return journey to the Zenith Works was made by exactly the same route, and just before the entrance to the Silent Pool the outfit was let go. Here the engine properly "took hold," and, notwithstanding the hard work it was doing, there was not a trace of knocking on acceleration; in fact, the impossibility of making the engine konk was noticeable throughout the test. At the Zenith works the passenger was

**Road Tests of New Models.—**

dropped and the remainder of the trial was made with an empty sidecar. Appallingly rough roads were traversed, but throughout the whole period a commendably high speed was kept up, entailed by the necessity of accomplishing a certain amount of work in a certain time—a task more fitted for a solo mount.

Reviewing the test, we can safely say that an earlier remark by our passenger that the engine would not tire was absolutely true. The unit also proved to be well balanced, its slow running was good, and its acceleration all that could be desired. Flexibility is one of the features of the engine, but the carburetter, though almost automatic, was not so entirely.

So easy was the steering that mile after mile the machine could be ridden with one hand, and on certain occasions with the hands off; there was very little tendency for the outfit to leave the straight path unless the camber of the road was severe. Dummy belt rim brakes are fitted to both wheels; either proved sufficient to stop the machine in a very short distance.

There were a few instances of oil leak, one rather tiresome one at the oil indicator which spattered the rider's offside boot.

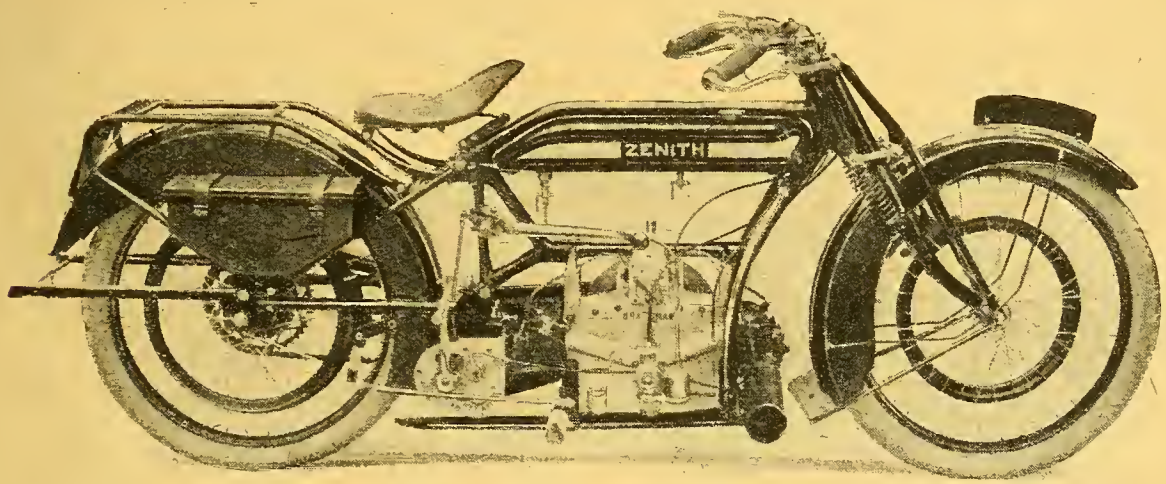
It was obvious, considering the distance the machine was driven and the nature of the route, that it is capable of climbing any hill with two up, and that bottom speed is very rarely likely to be required.

Later we had occasion to try the same machine solo. Gear ratios, etc., were unaltered, and the test as a test would have been a joke were our journey not a strenuous trip to Devonshire for a sporting trial which included Beggar's Roost and Hunter Inn hills in its route.

The Zenith-Bradshaw, however, was more than equal to the occasion, and we "got there"—the colloquialism aptly denotes a series of rushes to points of interest on the course—with great regularity and considerable rapidity.

As it turned out the machine was actually *undergeared* for both the stiff acclivities mentioned; had there been no critics present we should have attempted a spectacular ascent of Beggar's Roost with its dreaded 1 in 3.3—or 1 in 2 over the hump—on second gear. As far as we can judge there was quite a sporting chance of success.

The journey supplied us with but one subject for criticism, and that has already been referred to. Before we reached home the whole engine and rider's right foot were liberally coated with oil slung out by the indicator. Some means of usefully trapping this surplus lubricant should not be difficult to devise.



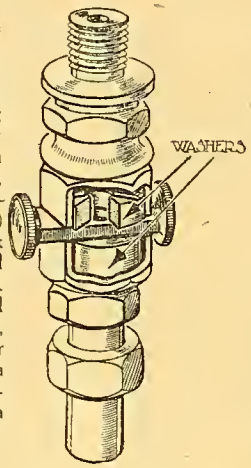
In its chain-driven form the Zenith-Bradshaw retains much of the simplicity and well-balanced appearance of the earlier belt model.

## THE CARE OF CHAINS.

THE novice who is new to chain drive should beware of two common blunders. The first is to take it for granted that his front chain will seldom need adjustment, because it is encased and lubricated. The best new chain, running under these high-speed conditions, will generally sag enough to foul the case within 1,000 miles, at which distance its tension should be verified and adjusted. (Should the rear chain be enclosed, the 1,000th mile will be soon enough for an examination; if it is naked, 500 miles will probably find it slack.) The second blunder consists in lubricating a naked chain by pouring oil on it or rubbing it with grease. It is possible that this makeshift system is better than running the chain bone dry; but whatever lubrication may be effected is more than balanced by the dust and dirt which are birdlimed by the lubricant, and slowly worked into the joints of the chain. Dust and dirt act as a powerful abrasive, and accelerate chain wear. The only sensible way of treating a naked chain is to remove it at regular intervals—every thousand miles is not too often—wash it thoroughly in paraffin (two separate baths are desirable), and, when perfectly clean, give it a third bath in some melted lubricant such as Russian tallow, which will fill the joints and seal them for a long distance against the entry of abrasive dust, without forming a magnet for the collection of more dirt.

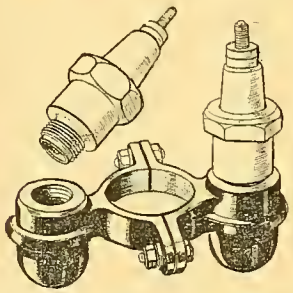
# AMONG THE ACCESSORIES

## Non-Leaking Petrol Tap.



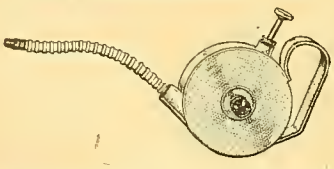
Quite a new system is embodied in the construction of the Concentric Patent Petrol Tap, the only moving part of which is a flat strip of metal with a hole in the centre, which slides (by external pressure) through two cork washers compressed by means of nuts. The tap is guaranteed to be free from leaks, and is sold at 5s., or 6s. 6d. including a filter. (W. R. Volrath, 28, Victoria Street, London S.W.1.)

## Carrier and Bath for Plugs.



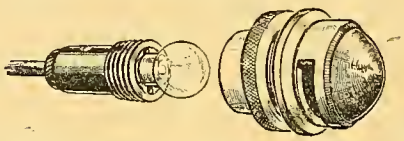
Designed to carry two spare sparking plugs, and at the same time to clean them by means of petrol contained in the cup portions, this useful holder is sold at 4s. 6d. by the Gulson Engineering Co., Ltd. Gulson Road Works. Coventry

## Oiling Inaccessible Parts.



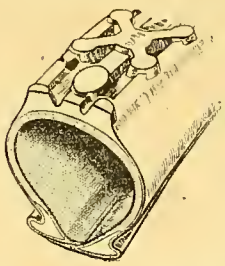
The flexible spout on the Mac Stan oiler is very useful for reaching inaccessible places. 3s. 9d. (P. Thomas, Old Hall Road Wolverhampton.)

## Rear or Inspection Lamp.



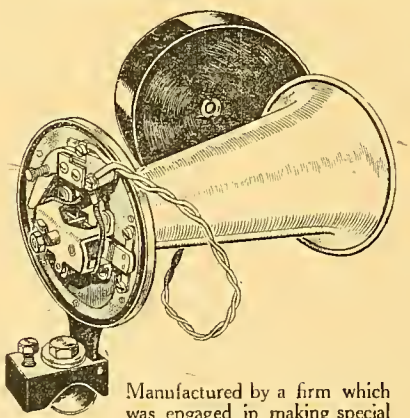
By unscrewing the insulated portion of this tail light, the lamp can be withdrawn and used for inspection purposes. (A. H. Hunt, Ltd., H.A.H. Works, Tunstall Road, East Croydon, Surrey.)

## New Tyre for Big Sidecars.



Quite a new production of the North British Rubber Co. is a 28 × 3in. (flat base rim) tyre for heavy sidecar outfits. The tread consists of the usual Clincher cross pattern, and the cover is built up on four layers of canvas. (The North British Rubber Co., Ltd., 204, Tottenham Court Road, London, W.1.)

## Well-made Electric Horn.

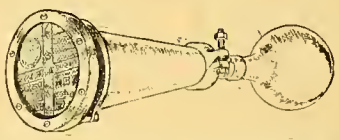


Manufactured by a firm which was engaged in making special telephones for the Navy during the war, the Graham electric horn is an excellently designed warning signal. Its mechanism is of the buzzer type, and will work off a 4 or 6-volt accumulator £1 16s. 0d. (Alfred Graham & Co., St. Andrew's Works, Crofton Park London, S.E.4.)

## Moderately Priced Windscreen.

With coverall apron and all-metal frame, adjustable to any angle, the Robini Windscreen is marketed at 30s. (The Robini Manufacturing Co., 1 and 3, Tulse Hill, Effra Road, Brixton, London, S.W.2.)

## Novel Licence Holder.



Attachment of the licence-holder to the fore part of the horn is the (protected) idea of Mr. W. Winkle, 47 Etruscan St., Etruria, Stoke-on-Trent.

## Miniature Map Measurer.

Familiar to ex-reconnaisance officers and others, the map measurer is an extremely useful addition to the pocket kit of the motor cyclist. The neat example illustrated has been introduced by J. B. Brooks, the well-known saddle manufacturers, at 3s. 6d. (complete in leather case).

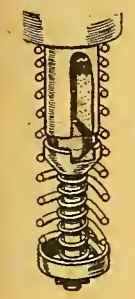
# IMPROVING AN EX-W.D. MACHINE.

## Describing Alterations to an Old 4 h.p. Douglas carried out by a Reader.

BEING "ex W.D." myself, perhaps it is only natural that my financial resources could only go the extent of procuring another war victim—a 4 h.p. Douglas. The obvious task, after a casual glance round, was a complete overhaul, and this gave an opportunity to attempt a few alterations (such as amateurs love); these were mostly successful, and are detailed below.

### Eliminating Air Leaks.

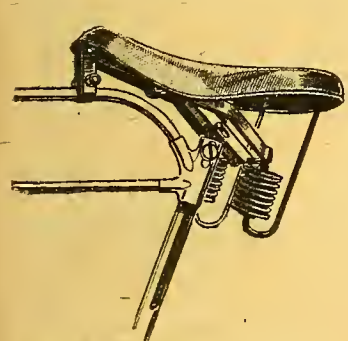
The question of reducing air leaks in the slightly worn valve guides was first considered, and the outer ends of both inlet valve guides were countersunk and a felt washer well soaked in graphite was placed on the valve stem, up to the countersink. This was kept in position by a steel washer and spring, the washer being "dished" so as to squeeze the felt washer, in conjunction with the countersunk guide, on to the valve stem. The spring, which was a fairly light one, rested against the inside of the valve spring collar. Care must be taken not to use a very large steel washer, as the valve spring must clear it in working. This arrangement was found to be very effective for easy starting, and it avoids the unnecessary pressure which is present when the valve spring itself is used to keep the felt washer in position.



Air leak preventer on valve guide.

### Far Greater Comfort.

Memories ("tender" at times) of some "joy" rides on some of the approaches to London, brought the saddle under review, and it was resolved to use a spring pillar fixing. A short length of light tubing (a free fit in the saddle pillar tube), was dropped inside the frame tube, to act as a distance piece or stop for the compression spring. This spring was about 8in. long, being carefully selected to suit the weight of the rider. The tubing of the seat pillar itself may be more substantial, preferably steam pipe, and should be a nice sliding fit in the frame tube. It was drilled near the top end to receive the pin which keeps the two pivoting arms in position; these arms are held in place at the front by the original bolt which held the pillar clip (this was done away with), and a small piece of tubing was placed between them to keep them against the framework of saddle. The clip on the top tube is U-shape, and was fixed by using the bolt in the nose of saddle. It will be seen that the pivot arms have slots where they are connected with the sliding tube; this was necessary to allow for the radial movement from the clip on the top tube. As it was desirable to limit the downward movement of the saddle a hole was tapped in the frame lug, and a corresponding slot cut in the sliding tube to accommodate a steel stud; the position of the slot was regulated so that the rear saddle springs were just coming into action before the end of the slot was reached. Although this was rather a crude arrangement, it improved the comfort of the saddle 100 per cent.

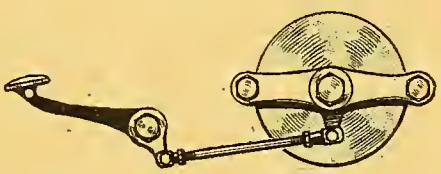


Spring seat pillar which greatly enhanced the comfort of the driver.

### Oiling System Modifications.

The tank being a 1915 pattern, was designed for a lubricator on the outside; however, a 1918 type lubricator was obtained, and the original ⅝in. diameter hole in the tank was slotted forward in line with top tube to make room for the two oil pipes on the new lubricator; a tin sleeve of the required shape was then soldered in. While on the lubrication question, it was found that a new glass was required for the gauge in the sump, but remembering the unfortunate case of a friend, on a similar mount, who had his glass smashed by a flint from a passing vehicle, a copper plate disc was inserted instead. No doubt the oil gauge is convenient (when clean), but I prefer to unscrew the sump cap to examine the oil rather than to risk being drained of oil a few miles from anywhere.

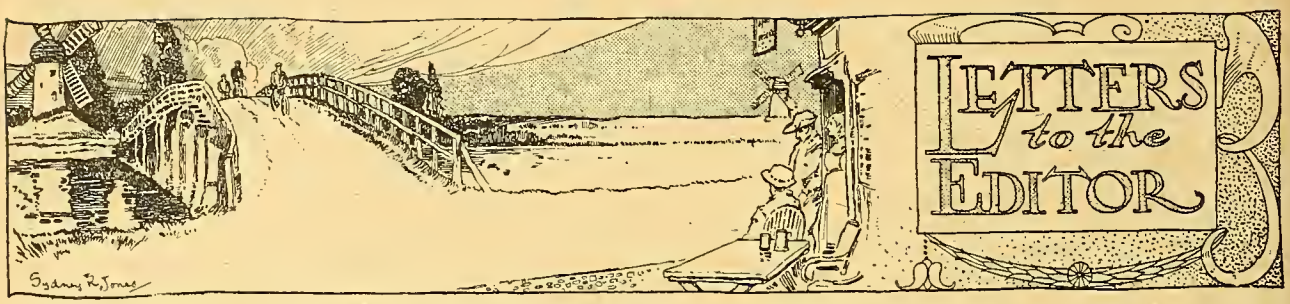
On a trial run solo, the clutch pedal on the front cross tube was found to require rather an effort to reach, so an attempt was made to fix up a pedal similar to the 1920 type, which pivots from the back cross tube. The clutch release arm was removed, and by taking advantage of the double thread was replaced with the arm below; the sketch of the new pedal control is sufficiently clear to explain without further word. SAXON.



Alteration to clutch control, bringing pedal to a more convenient position for operation.

## DOGGED BY ILL LUCK.

SOME machines of undoubted merit invariably fail to justify themselves in public trials. An ingeniously designed French machine, the Viratelle, which has a water-cooled engine, had such an appalling run of bad luck in the International Six Days trials last year, and its rider was so plucky and persevering that the English riders subscribed to give him a consolation prize. In the recent *Tour de France* trial of 2,300 miles a similar machine ran through the whole trip without trouble until within 62 miles of the finish, when it broke its front fork. Hard luck indeed!



The Editor does not hold himself responsible for the opinions of his correspondents.

**Correspondence should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, E.C.4, and must be accompanied by the writer's name and address**

### *PILLION RIDING INSURANCE RISKS.*

Sir,—I was pleased to see "Ariel's" letter on the above subject. I think it is about time something was done in the matter of insurance charges on pillion riding. It is one of the safest of sports. I have been a pillion rider over twelve years, and I consider that, if anything, insurance charges should be less. My experience is that greater care is exercised when a machine is used for pillion riding.

There are firms which advertise, "No extra insurance for pillion riding." This offer should be properly examined before entering into the scheme. Only the non-tariff companies can make this offer, and none of the better known and therefore reliable companies makes such an offer.

F. M. DAVIDSON.

### *SPRINGING ON A SIDECAR SUBSTITUTE.*

Sir,—As an owner of a Scott Sociable, I was much interested in "Ixion's" remarks concerning this machine, which I can bear out very fully. "Ixion" does not mention the excellence of the springing, which I consider far ahead of any of the light cars I have possessed, though, in my opinion, it would be improved by the employment of friction shock absorbers.

As an example of the easy riding of the Sociable, I recently made a trip of approximately 200 miles, and packed in the back of the car was an Aladdin paraffin oil lamp, complete with mantle, the latter having been in use for about six months. These mantles are, of course, exceedingly fragile when once burnt off, and will crumble to bits if severely jolted in the hand, yet it survived the journey perfectly safely, and is still in use! B.

East Lothian.

### *CONGRATULATIONS TO "THE" SENIOR T.T. RIDER*

Sir,—I should like to express my admiration of the performance put up by Mr. G. Cowley, Sen., in T.T. on Thursday.

When one considers this gentleman's age, it has to be admitted that his riding was nothing short of magnificent.

Is a "disclaimer" necessary? "21."

Cardiff.

### *AMERICAN SUPERIORITY!*

Sir,—Further to the "Scott incidents," by "F. J. D." in your "1,001st," "I could a tale unfold."

Last year an English tourist was hiring a car in New York for touring. Having chosen one, a trial run was started; the car travelled but four miles down town when it came to rest. On opening the bonnet the driver found that the manufacturers had forgotten to put in the engine. Though mechanically ignorant the tourist was doubtful. The manager, however, explained to the incredulous tourist that the car had run four miles on its reputation.

L. R. A. HARVEY.

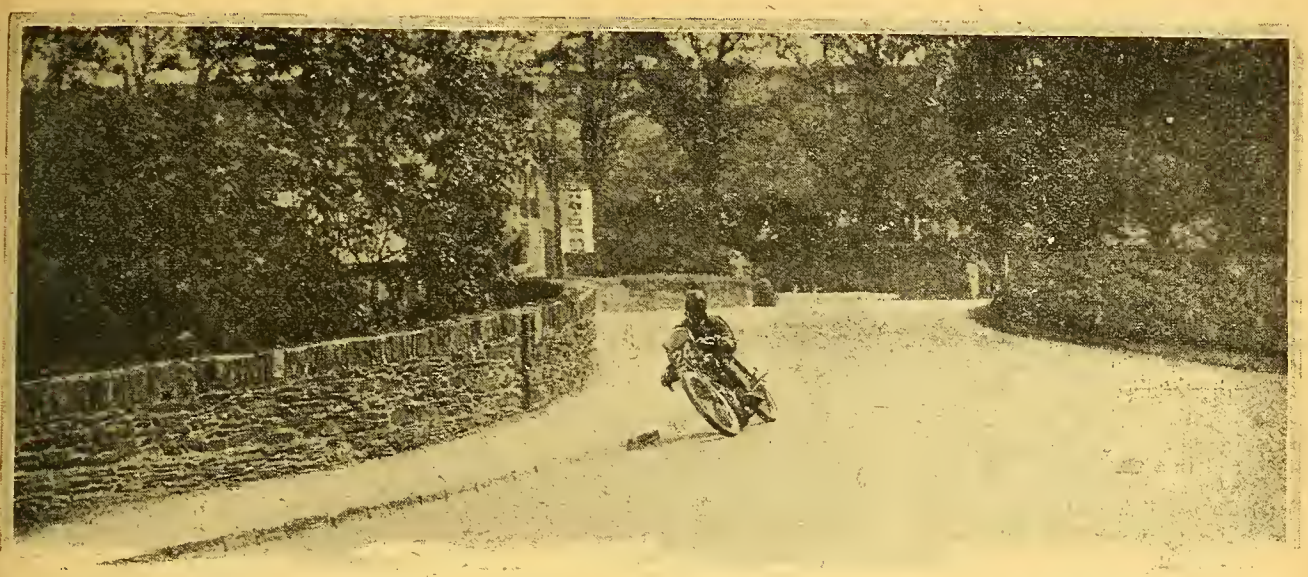
### *THE EVOLUTION OF THE MOTOR CYCLE.*

Sir,—The article in the 1,001st number, entitled "The Evolution of the Motor Cycle," was most interesting and enlightening; it prompts the reflection that England was surely a land of heroes twenty years ago.

Various examples of the machines mentioned in the above article are exhibited at South Kensington Science Museum; they include a front-drive Werner, and a De Dion tricycle with its engine sectioned. The modern 'bus is represented by a 1916 Rudge-Multi—in a glass case.

R. A. ASHBY.

C. G. Pullin (346 c.c. Douglas) passing another competitor who fell at Sulby Bridge. The Douglas, the only flat twin in the Junior T.T. race, made a splendid performance, being third until 10 miles from the finish.



Steering within inches of the kerb, leaning at seemingly impossible angles, and utilising the least camber of the road as a banking, are all to be thought of in lightning flashes by the successful T.T. rider, who must never loose even a fifth of a second by momentary inattention. F. W. Dixon, the rider of Indian machines, has all the qualities of a super road-racer in his make-up.

## *WHAT IT COSTS.*

Sir,—The enclosed schedule of my running expenses with a 1912 free engine Triumph may be of interest. I may say I do all my own repairs except rebushing of the connecting rod, which has been required more often than should be the case, as the bush has on two or three occasions turned in the housing and worked loose that way, instead of legitimately on the crank pin.

I used benzole when I could get it till early in 1921, when the price of petrol was so much reduced. The engine ran rather hot on it; a half and half mixture with Shell gave the best results. The mileage on benzole in 1914 was sometimes as good as 150 m.p.g., but now I can only do about 90 on Shell. I cannot account for the big difference, as I have recently fitted a new cylinder and throttle piston, without any improvement. A new piston might be an advantage, but it would hardly make so much difference in the consumption.

B. T. VINES.

## *PILING IT ON!*

Sir,—In June, 1920, as a novice I bought a single speed motor cycle; in December, 1920, I converted it to 2-speed (c. and k.s.), and in July, 1921, I had the impudence to attach a Canoelet Minor sidecar. The experiment has been fully justified, and in spite of mishandling through my inexperience over 5,600 miles (sometimes with 3 up), it has not yet let me down, neither has the engine been touched by a repairer.

On the 28th ult. with sidecar and passenger it was capable of doing Brighton to Redhill (29½ miles) in 1hr. 20min. through the dense Sunday evening traffic, and this in spite of baulking by char-a-bancs, entailing a loss of at least 8min.

I have no connection with the makers of this excellent machine (2¾ h.p. O.K.-Union 2-stroke), and my only object is to give voice to my thorough satisfaction.

London, E.16. "CITY CLERK."

## *SOLDERING BOWDEN NIPPLES.*

Sir,—In reference to "Road Rider's" recent hints on soldering, these will prove useful to many. There is, however, one defect in the use of solder for Bowden wires. The heating necessarily anneals the wire just at the point where the friction is greatest; this causes it to break again near the nipple. Has not every motor cyclist experienced this? The solderless nipple is therefore the ideal stop.

A. E. BOTTOMLEY.

Sir,—After reading "Road Rider's" article, I thought a few supplementary hints from an old hand might be useful.

For heating the iron a gas flame is preferable, as then the end can be watched. The correct heat is reached when the tinning on the point begins to discolour; and if, instead of rubbing the iron on a brick, it is dipped for an instant in the flux, better results will be obtained.

To solder a nipple, I find that the best method is as follows:—

Thread the wire through the nipple and bend the end so that when the nipple slides up to the bend it is in its right place.

Apply some flux to the wire at the *small* end of the nipple, then, while holding the wire with a pair of pliers about an inch from the nipple and with the nipple down, apply some solder with the iron. Hold the iron there for a time until the solder runs through the cut end of the wire about one-eighth of an inch from the nipple, and turn down the strands radially. Another touch of the iron will put a blob of solder on the turned down ends. This seems complicated, but is far better than gripping the nipple in a vice.

Cambridge. G. R. H.

### TUNING A 4 H.P. TRIUMPH.

Sir,—With reference to the letter from "A.M.I.Mech.E.," is he quite sure that he can get his engine to tick over at only 120 r.p.m.? One exhaust note per second!! 240 r.p.m. perhaps, but 120! I have met few engines that will tick over slower than mine, and I can hardly get below 300 r.p.m.

London, E.C.2. MACCABÆUS.

### TUNING A TWO-STROKE.

Sir,—Now that a Levis machine has again won the Lightweight T.T., there must be quite a number of enthusiastic riders of these machines who would like to tune up their machines in order to get a few more m.p.h. from them. To these I pen the following hints, taking it for granted that the engine is spotlessly clean outside as well as inside, and that the bearings are in perfect order :—

(1) Do not lighten the reciprocating parts or alter the size of the ports.

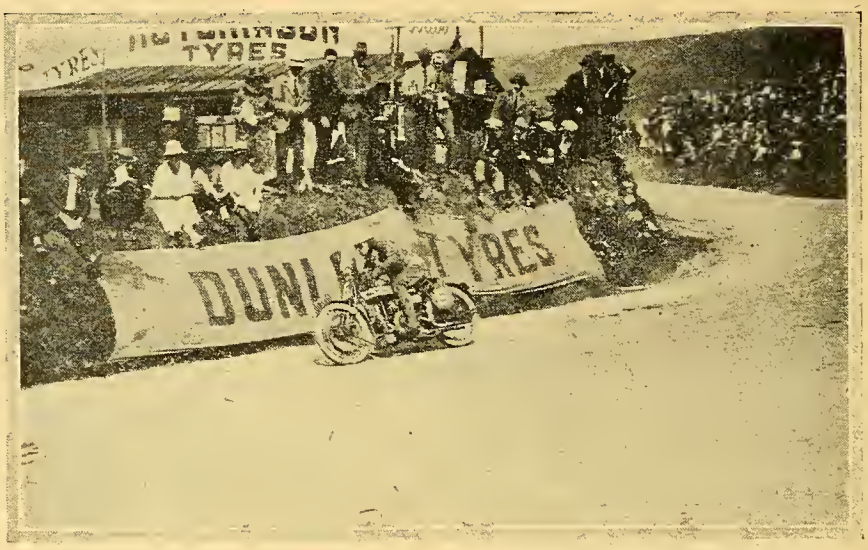
(2) Thoroughly clean the inside of the exhaust pipe where it is bolted on to the cylinder.

(3) Fit a good plug with thick electrodes and a one inch "reach" so that it projects slightly inside the cylinder walls.

(4) For those machines that have variable E.I.C. magnetos a minute screw will be found in the end plate of the magneto just underneath the contact breaker. This screw determines the range of control of the spark lever. Take it out and the speed of the engine will be increased by several m.p.h., as the range of control has been increased by about 50 per cent. Do not make the mistake of over-advancing the ignition.

(5) Fit a variable jet, as without one the best cannot be expected to be obtained from the engine.

(6) Do not alter the silencing arrangements of the machine or fit a straight through exhaust pipe, as the same is very much noisier and actually *decreases speed by several m.p.h.*



Safely round the corner at Craig-ny-baa; A. H. Alexander (499 c.c. Douglas) entering the speedy stretch to Hillberry, one of the fastest portions of the course, where Senior T.T. mounts develop their highest speeds.

(7) An extra air valve is a slight advantage if used correctly.

(8) For T.T. models it pays to alter the position of the float chamber from behind the carburetter (Senspray) to the front of it, as a rich mixture is obtained when climbing hills and weak when descending them.

Oxford. SOLDER.

### LIGHTWEIGHT TWO-STROKES FOR LONG DISTANCE TOURING.

Sir,—Referring to a correspondent's remark about his Royal Enfield lightweight doing 250 miles in one day, I should like to give you the following particulars :—My machine is a standard pattern 1920 Enfield lightweight, and I rode in the London-Edinburgh Trial.

I left Bagshot at 5 p.m. for Hendon (35 miles) on Friday evening, and left Hendon 7.38 same evening, arriving at Edinburgh, on schedule time, Saturday evening (408 miles), and on Sunday morning left Edinburgh (11 a.m.), arriving Northallerton (Yorks) 8 p.m. same evening (168 miles); left Northallerton 9 a.m. Monday, and arrived Bagshot 12.30 p.m. (approx. 256 miles). Can any correspondent beat this on a standard pattern 190 Enfield lightweight. Further, throughout the whole of the journey I did not use a tool—nothing but an oilcan. I am purely an amateur rider. H. SUTTON.

Sir,—I read with interest the letters from Mr. H. C. Sharp and "Baby Enfield," as I am, or was during the winter, the owner of a two-stroke Hawker.

During the winter I have regularly on Sunday, with my wife on the pillion, done journeys to York and back, Carlisle and back, Scarborough and back, from this city (Newcastle). Last Sunday we both went to York in 3¼ hours without touching the ground or stopping in any way, and we returned the same afternoon in the same time. The total distance is 160 miles.

A. E. STORY.

Adjusting goggles or enjoying a final cigarette—that is how the riders assembled on the eventful morning, ready to prove their mounts and themselves in the big event of the year—the Senior T.T.

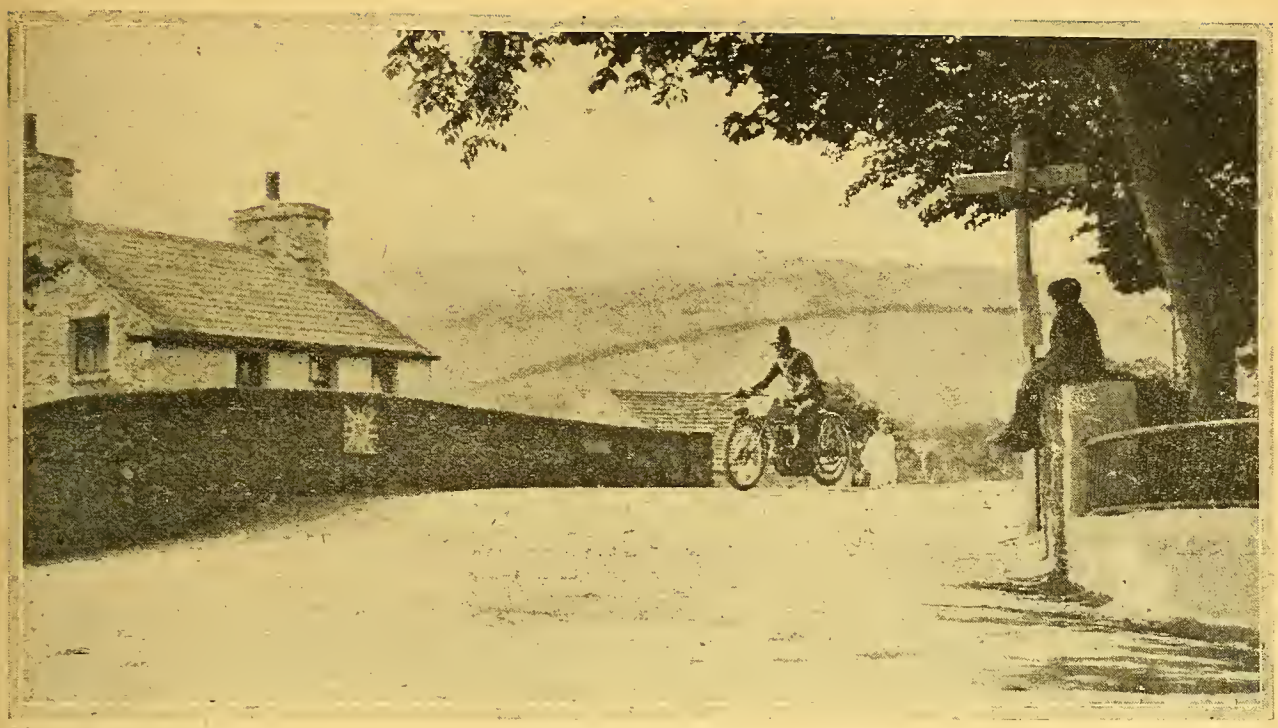
**The Leatheries Ltd., Sampson Rd. North, B'ham.**



Ballaugh Bridge, one of the lesser-known danger spots on the Tourist Trophy Course. The fastest machines jump at this point, yet, immediately, they have to be steered into a narrow and curving village street. J. Joynson, in the Junior Race, is shown with both wheels of his Invicta clear of the road.

### *WITHOUT INVOLUNTARY STOPS.*

Sir,—I noticed recently that a machine was said to have run for a whole week without an involuntary engine stop. It occurred to me that this cannot be any great feat nowadays. I am but a clerk with few tools (mostly of the "Woolworth" type), yet I manage to keep an old machine running all the year round. I see from my wife's records that our last involuntary engine stop was in October, 1920 (6,000 miles nearly). Barring actual breakages, there seems no reason why a machine should stop if it is looked over occasionally. Surely some of your readers could supplement this, real experts I mean, and not mere M. U. UDDLERS.

London, S.W.

### *PISTON CLEARANCE.*

Sir,—With reference to the comments by "Ixion" on the G.R.I. engine, I was amused by his remarks on the piston clearance.

Being partly concerned in the design of the piston, I would like to point out to "Ixion" that:

1. The piston was designed to have a clearance of .004in.
2. The pistons were not finished to size by a "lathe hand," but, as is the usual practice, they were ground accurately to size, a tolerance of plus or minus .0005in. being the maximum allowed. "AMUSED."

Gloucester.

### *GOOD SAMARITANS.*

Sir,—May I through your columns thank the unknown driver and passenger of a Brough sidecar outfit, who, when the front wheel spindle of my own outfit broke at 6.15 a.m. three miles north of Ferrybridge in the London-Edinburgh run, drove to Ferrybridge in quest of a spare? Failing in this, they returned to me and took my wife to Pontefract, where they went to much trouble in finding first the owner and next the manager of the only likely motor cycle depot, but unfortunately no spindle could be obtained.

In the meantime I had discovered a small garage at Fairburn, owned by Mr. John Thomas. On my wife's return, this gentleman rode off to Castleford on a similar quest, again without success. He then sent his assistant per Douglas sixteen miles to Leeds. His wife meanwhile gave us a most welcome breakfast and a souvenir in the form of a giant cauliflower. (I wish I could have it embalmed.) The spindle obtained, it was soon fitted, and Mr. Thomas made us the almost foolishly small charge of 7s. 6d. inclusive. Needless to say, the long delay robbed us of any chance of even a "bronze." A. H. NELSON.

[We do not usually make a practice of publishing in full instances of sportsmanship on the road—generally there are too many—but we feel justified in making an exception of this double proof that "the fraternity of the road" is no mere empty phrase.—ED.]

## Special Features.

TECHNICAL ASPECT OF THE T.T. RACES.

THROUGH THE MOUNTAINS OF ARGYLL.

PASSENGER MACHINE TOPICS.

### Times to Light Lamps.

[illegible] p.m.

[illegible]

[illegible] 9.6

[illegible] 9.8

Times have to be observed thirty minutes earlier in Irish Counties legislation and Lighting Order 1911.

### Lighting up a Speed Event.

The novel idea [illegible] is to be tried in the streets of Southport next [illegible] a spectacle, an effort will be made to [illegible] a midnight scene. The event starts at 7 p.m.

### Events for Big Midland Club.

Events for the Midland Centre meeting [illegible] to be held on the 24th inst. [illegible] in charge. Mr. A. F. Spencer, [illegible] Street, Coventry, is the hon. secretary.

### Australian Road Record Broken.

The reliable "Melbourne Australia" [illegible] record the best journey [illegible] Darwin, having a Douglas [illegible] with the 950 miles each way has been [illegible] the Darling Downs, parts of which are very mountainous.

### The Tamil Motor Cycle.

A letter in a recent South African [illegible] in agreeing a native who was fully [illegible] in the police raided a motor [illegible] under the street and set it in [illegible]. The engine did not surrender until the rider had had a shot between the cylinder [illegible].

### Overland.

The Lady [illegible] is to visit Devizes on [illegible] Motor Cycle Club's [illegible] "Motor Cycle Enthusiast" [illegible] Lady Douglas takes in the [illegible].

The Lady [illegible] time many [illegible] in the case of England.

### Mechanical Traffic Signals in Paris.

Silent [illegible] are to be installed in the streets of Paris. They will [illegible] the direction to be followed by the [illegible], and the direction is to be avoided. There will be no policemen in your [illegible] but in their place there will be [illegible] green lights will convey information to the motorist as to what [illegible] the traffic is approaching there [illegible] will be lights arranged for a single policeman. Red lights will signify "stop," white means "go ahead," and the green "caution."

### A Swiss Road Race.

Motor-cycle competitions are becoming increasingly popular in Switzerland, and a [illegible] is to be held in the [illegible] this year. This is submitted to take place in the first week in July. We understand that several enthusiasts are [illegible] the latest sports models of British manufacture, among them the [illegible] Douglas.

### An Official South African T.T.

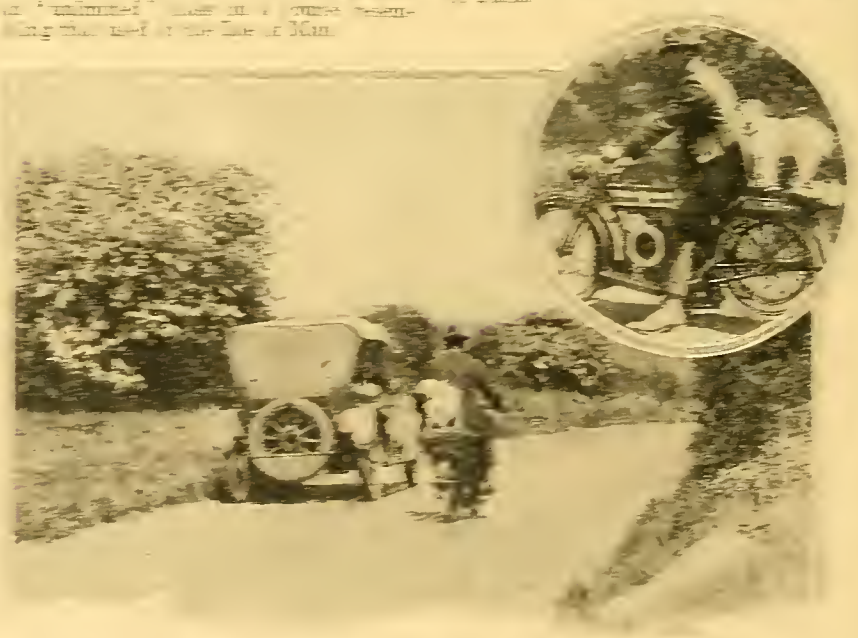
The Mayor of the Town of South Africa was [illegible] in Cape Town before the war began, and [illegible] motor-cycle [illegible] in South Africa in the same way [illegible] the A.C.U. does in England. It is [illegible] a South African T.T. Race, which will include [illegible] in it in 1911. [illegible] Class B in [illegible] Class C in [illegible] and Class D in [illegible]. The conditions will be as nearly as possible [illegible] Class B in the Manx T.T. Races. The [illegible] somewhat much [illegible] in the way it is native has been [illegible], as it would not be safe to have a "mixed" race in a [illegible] having the best of the Isle of Man.

### Penny Steep!

According to a daily paper's report, [illegible] by several of our readers, the gradient of Birchanger Pass is 1 in 3 for about three miles.

### 774 Miles in 24 Hours.

By averaging a distance of 774 miles, Lord [illegible] Mercedes won the Isotta 24-hour road race. Second place was scored by Nazzaro driving an Isotta, who covered 765 miles. Lautenschlager, [illegible] third in this class with 751 miles, and Lambert, Excelsior-Zedel, was fourth with 731.1 miles. In the 3½ litre the winner was Pierre [illegible] two-seater, who covered 731.1 miles. A good performance was made by Clem Mauselin in the 2½ litre class in covering 647 miles. The race, promoted by the Italian Touring Motor Club, took place over a short course in the eastern suburbs of Paris.



Dog mates and dog managers make a unusual crew. The little wire-haired under dog on the carrier of the Douglas does not ride under compulsion, but positively revels in the quiet evening run in the sun with as much enthusiasm as his master.

### All-purpose Machines for the Multitude.

At a recent luncheon given to the Press by the producers of the Ner-a-car, Earl Fortescue stated that the Ner-a-car was intended to be a general service motor cycle: an extended programme had been developed.

### Double Twelve-hour Record Attempt.

Last Thursday D. R. Marchant commenced a twenty-four-hour record ride on a Norton under the new "double twelve-hour rules," whereby twelve hours are completed on two consecutive days. The attempt was abandoned owing to rain.

### Club Propaganda.

In the Isle of Man during the T.T. period the residential headquarters of each competing team are invariably distinguished by a banner; not to be behind in publicity the local Jawa agent, Mr. W. A. Dyer, the "Jawa man" of the Tredinnick Centre, A.J.C., and the Bradford M.C.C. was similarly distinguished by a suitable banner to attract the North-countrymen as a rendezvous.

### Prize Winners Wanted.

The addresses of the following competitors, who left the London Exhibition during the North London Rally on Whit Monday without having their prizes, are wanted by the organisers: Mr. L. W. Day, "Claremont," Ballards Lane, Finchley, N.3; Mr. Bugg and Mr. Giddings. Ivy and Dot in hen-pegging competition. Mr. Barnes, Dot in pea-eating competition, and Mr. Bardley, Dot in the balloon blowing competition for cars and cycles.

### A Sporting Timing.

In two of competitions recently staged one apt concerning the speed in which certain motor vehicles were able to pass through Welwyn, the Chief Constable of Bedfordshire (Colonel Law) issued a notice to the Press in the effort that he intended to make an example of the few who drove at a dangerous speed through that village. In response to this spontaneous attitude, such a marked improvement has been noticed since this warning was issued that very few prosecutions were necessary. Infringements have also been recorded at reckless driving through Markyate, a few miles from Dunstable on the Holyhead Road, where the Chief Constable gives motor cyclists he intends to take similar action.

### A Motor Cycle Wanted.

It is not often that a reader of *The Motor Cycle* asks for a machine to be given to him, but a case brought to our notice is a really deserving one. A clerk in the Mission to Seamen's Institute lately returned from Ireland and only just recovered from a three weeks' bout of typhoid, having a large area to cover in the execution of his duties, his only means of locomotion being a motor cycle, and as the training ship "Conway" urgently needs a motor cycle to help him in his work. On Sunday he starts the day with a service at the Seamen's Hospital at 8.45 a.m. We sincerely hope that some charitably disposed reader may care to present him with some old machine which would help him in his good work.

### In a Good Cause.

During T.T. week in the Isle of Man Mr. Alexander W. Lisle, of Wavertree, raised by collection a sum of £28 15s. on behalf of the National Institute for the Blind. Mr. Lisle was a timed rider, received congratulations from practically all the prominent riders and traders who were in the Island.

### The Date of the I.O.

If the whole year were "fair" it is unlikely that any dates for T.T. races will be fixed so early in the year. In the spring and early summer the flow of orders is at high tide and the heavy work of race rules and the heavy time of it, makes either to plan and personal is a real inconvenience. By September nominations is easing off and such a comparatively late date would probably be acceptable to the Manx people who desire the T.T. to extend their season, but to any practicable extent in mind and is so expressed.

THE NEXT STAGE!

MOTOR CYCLISTS interested in small or large cars should get

The Autocar

Every Friday 4d.

the forerunner of all motoring journals. Founded in 1895, it contains the largest and most reliable motorable paper and enjoys the greatest circulation. It is undoubtedly unequalled as the representative British motoring journal.

### An American Motor Cycle Show.

A date early in February, 1923, has been arranged for the National Motor Cycle Show to be held in New York City.

### Good Reason for Retiring.

After going through the rules of the London-Edinburgh run so far as Darlington without trouble, E. J. Mac Gill, who motored on a solitary with a combination, with the result that the lay the latter.

### British Team for the International Trophy.

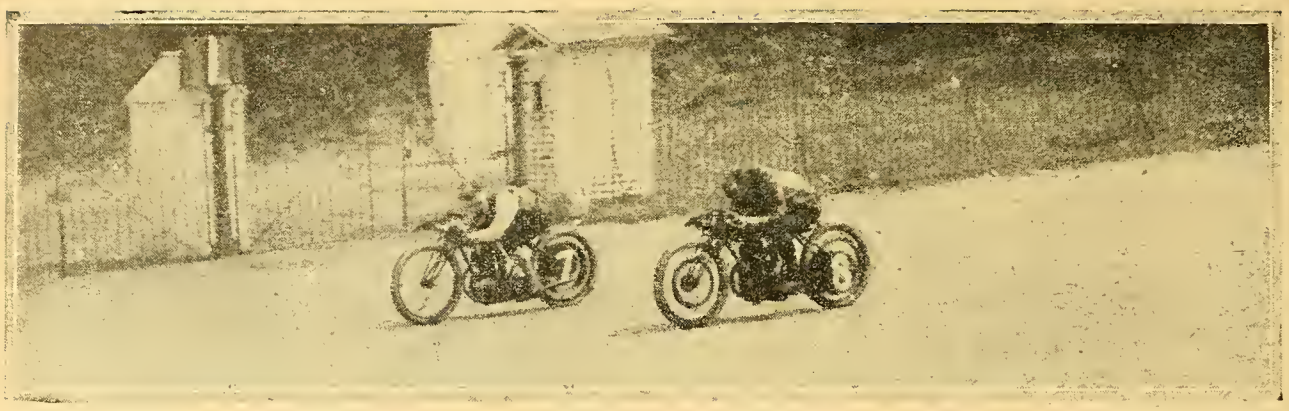
In view of their success in the Isle of Man, the A.J.C. has formed the three winners of the three Junior Trophy races—A. Bennett (AJS), Sandham, Senior T. (Velocette), and A.J.S. Junior and a Reserve (AJS Lightweight)—to have the honour of representing England in the International Six Days Trial which starts from Geneva on August 3rd.

### To Compete for the Club Championship.

As every event in last year's list has been selected for the team trial organised by the Motor Cycling Club for the Efficiency Challenge Trophy presented by *The Motor Cycle*. It seems having sent in their names.

The following are the clubs entered: The Motor Cycling Club, Sheffield and Hallamshire Section, Worcester and District, Poole Scouts, Leeds Tramway, Birmingham University, Northern Wolverton and Hampstead, Luton and South Beds, Coventry and Warwickshire, Leeds, Ilkley and District, North-West London, Ilkley Wanderers and District, Bradford, Lower and District, Nottingham and District, City and Guilds, Leicester and District, Oxford, North London, Ealing and District, Essex, Cambridge.

S. L. Baker on right, of Douglas, has seen it a new role. Never did one of his twins serve him so shabby as this stubborn animal, and never has he contrived in the rashest efforts of moral steering to evacuate. Had this race been held under jockey rules we are afraid he would have been disqualified for biting. A scene at the recent Douglas sports.



A tussle between a pair of Sunbeams. P. G. Kennedy and W. L. Kenning in the 5-Lap Solo class.

# A WIN FOR THE DUKE OF YORK.

## The B.M.C.R.C. Third Members' Meeting at Brooklands.

NUMEROUS short distance handicap races, fine weather, and a fair attendance were features of last Saturday's third members' meeting of the British Motor Cycle Racing Club.

Had it not been for the aftermath of the T.T. races more publicity might have been accorded to this meeting, and a larger attendance might have resulted, but as it was the park was not uncomfortably crowded. A party of paralysed ex-soldiers from the Alexandra Hospital, who had been invited to the track, formed a proportion of the spectators.

Event 1, a two lap race for motor bicycles up to 350 c.c., saw nineteen competitors on the starting line, and among these Le Vack was noticed mounted on the identical machine he rode in the Isle of Man, and J. V. Prestwich, who rode a J.A.P.-engined Coventry Eagle, with side-by-side valves. F. A. Longman rode the A.J.S. entered by Harry Martin.

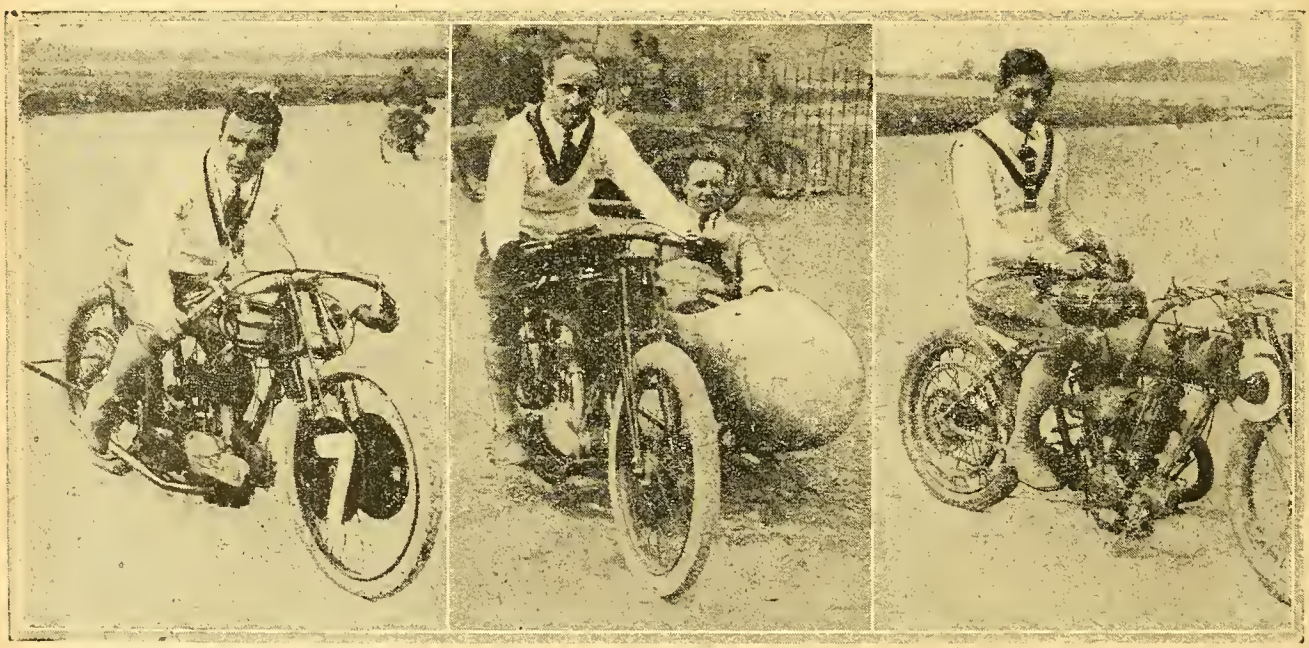
### The Second Lap.

At the end of the first lap Jones (Coulson) was leading, Watson (Douglas) and Fairweather (Coulson) were striving for second place, while the remainder of the leaders passed in the following order :—Reyersbach (Trump), Hall (Trump), Greening (Francis-Barnett), Baxter (Holroyd), Dequin (Ivy), Holroyd (Holroyd), and Williams (Sheffield-Henderson). Weatherell (Weatherell) retired with a sheared fly-wheel key, and Dequin failed to finish owing to a choked jet.

The result was an easy win for the first-lap leader.

F. V. Jones (346 Coulson).
S. M. Greening (249 Francis-Barnett).
G. H. Williams (348 Sheffield-Henderson).
Winner's speed, 59.29 m.p.h.

The second event was a similar race for

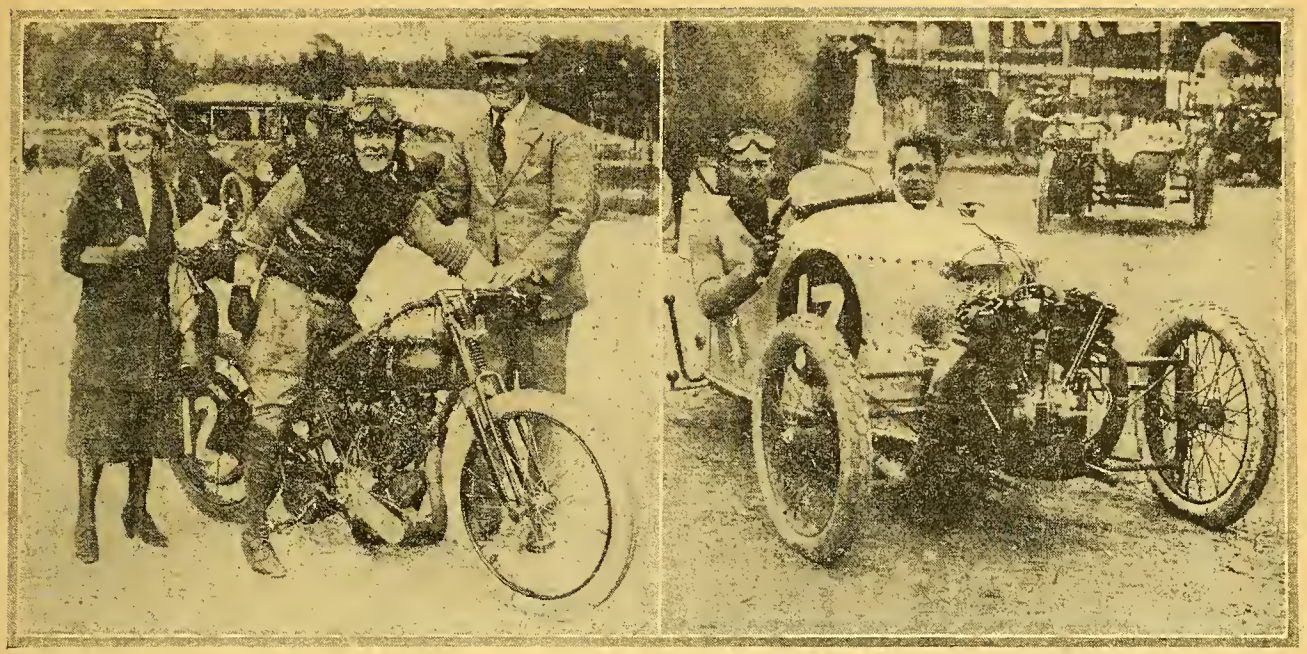


WINNERS AT BROOKLANDS LAST SATURDAY.

Lt. R. T. Grogan, R.N. (490 c.c. Norton)—solo handicap for machines between 350 c.c. and 500 c.c.; speed 67·52 m.p.h.

S. M. Greening (346 c.c. Francis-Barnett sidecar)—two-lap handicap for sidecars and cycle cars; speed 54·05 m.p.h.

O. M. Baldwin (994 c.c. Matchless)—two-lap solo handicap for machines between 500 c.c. and 1,000 c.c.; speed 85·07 m.p.h.



The Duke of York's rider, S. F. Wood, who won the 5-Lap Solo Handicap on a 994 c.c. Trump-Anzani. His speed was 86·12 m.p.h.

H. Martin (1,074 c.c. Morgan-Anzani), winner of the 5-Lap Passenger Handicap for Sidecars and Cycle Cars of any class. His speed was 70·58 m.p.h.

machines with engines between 350 and 500 c.c. In this, Lieut. R. T. Grogan, R.N., took part. This officer is certainly one of the Navy's most skilful motor cyclists, as he won one event and was placed in two others. He took part in last year's Arbuthnot Trophy Trial, while other naval men who assisted at this competition, Lieut. Evans Graves, R.N., winner of the first Trophy Trial in 1919, and another Arbuthnot Trophy competitor, Lieut. H. C. Hovenden, R.N., helped to push him off. Yet another naval competitor was Lieut. A. G. Smith, R.N., whose picture we recently reproduced in *The Motor Cycle*. He lost his leg in an accident at sea, but notwithstanding rode a plucky race in Event 7. So the Senior Service was well represented.

F. V. Jones (348 c.c. Coulson), winner of the 2-lap solo handicap at 59·29 m.p.h.

### 500 c.c. Race Falls to a Naval Man.

In the second event Emerson was mounted on a racing Douglas, with gate change and a Flexi carburetter, while two machines not often seen on the track were Cunningham's P. & M. and Mallett's Zenith-Bradshaw.

Halford (Triumph) rode next to Emerson, and before the start the former asked the latter, jokingly, to wait for him; his machine was the original o.h.v. Triumph.

Marshall (Matchless) made a bad start, but a quick recovery. Mallett, whose Zenith-Bradshaw was fitted with a gauze shield to protect the front cylinder tappets from dust (he used no front mudguard) succeeded in leading at the end of the first lap, but unfortunately he was no stayer. Others in the first rank were Grogan (Norton), Sheraton (Norton), Williams (Sunbeam), and Marshall (Matchless). Ill-luck befell Sheraton and Kehoe (Rudge), whose engines seized; Mallett retired with a faulty plug. Grogan had an easy win.

Lt. R. T. Grogan, R.N. (490 Norton).
E. A. Marshall (496 Matchless).
A. G. Williams (496 Sunbeam).
Winner's speed, 67.52 m.p.h.

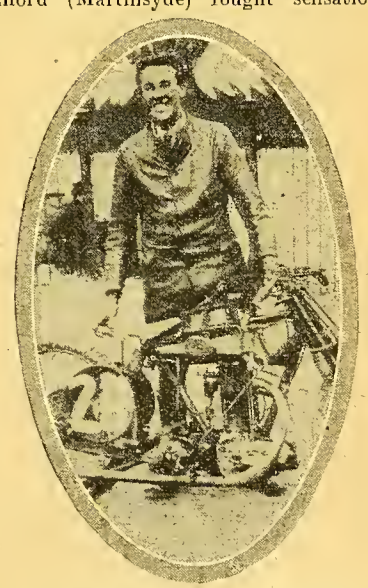
Also a two-lap handicap, the third race was for motor bicycles with engines between 500 and 1,000 c.c.

### Overhead Valve Twins.

Several interesting mounts took part. Stewart's Trump was fitted with one of the new 8-valve Anzani engines, and was provided with additional back frame stays to stop whip, while Baldwin's Matchless had one of the latest M.A.G. racing engines and a Zenith carburetter. Temple (Harley) seemed to be too highly geared to get off the mark really smartly, but even if he had it would have availed him little, as the handicapping was as bad in this race as in any other during the afternoon, since not a single close finish can be recorded.

### Results of Poor Handicapping.

Hall (Trump) took the lead in the first lap, while Baldwin (Matchless) and Gifford (Martinsyde) fought sensation-



C. M. Fairweather (249 c.c. Coulson) who won the 5-lap handicap at 61·7 m.p.h.

### A Win for the Duke of York.

ally all the way for second place. Longman (Ariel) rode next, followed by Bainbridge (Martinsyde) and Allchin (Harley). As usual, the winner came in streets ahead of the rest of the field.

O. M. Baldwin (994 Matchless).
T. R. Allchin (989 Harley).
J. Hall (744 Trump).
Winner's speed, 85.07 m.p.h.

Next followed a series of five-lap handicap races, Event 4 being for lightweights and juniors. There was an excellent entry, but as the limit man had 4 min. 20 sec. start of the scratch man, he and others near him had finished their first lap before the scratch man had started. Consequently the public became thoroughly confused and doubted the results.

C. M. Fairweather (346 Coulson).
F. A. Longman (349 A.J.S.).
A. Watson (350 Douglas).
Winner's speed, 61.17 m.p.h.

Some excitement was provided for a change in the next race, as Emerson (Douglas) worked up from scratch to winner amongst the 500 c.c. machines. Grogan (Norton), whose handicap had been reduced to 1m. 50s. from 2m. 20s. acquitted himself well. Whitaker (Sunbeam) had his plug blow out, and Kennedy (Sunbeam) had a broken piston ring. Gradually working to first place Emerson won easily, but missed breaking the ten miles record.

J. L. Emerson (499 Douglas).
C. Volk (499 Douglas).
Lt. R. T. Grogan (490 Norton).
Winner's speed, 81.39 m.p.h.

### A Royal Win—By Proxy.

The last five-lap handicap was that for motor bicycles with engines between 500 and 1,000 c.c. Its chief feature was the fine riding of the driver and the excellent performance of the Anzani-engined Trump entered by His Royal Highness the Duke of York and driven by his chauffeur S. E. Wood. True, Wood had a start of 2m. 10s. on scratch, but his machine was a dark horse, and he not only led in every lap but won with ease. Allchin (Harley) put up an excellent fight for second place, which he attained in the fourth lap, but the handicap allowed to Temple (scratch) did not permit of his getting better than third place.

H.R.H. The Duke of York (994 Trump), (driver, S. E. Wood).
T. R. Allchin (989 Harley).
C. F. Temple (989 Harley).
Winner's speed, 86.12 m.p.h.

Next on the programme was a two-lap passenger handicap for sidecars and cycle cars of any class, but it provided no special excitement. Its winner, Greening, had 2m. 26s. start over the scratch man, Ware (Morgan-Jap), who, though travelling well, only managed to finish seventh. Harry Martin driving an Anzani-engined Morgan rode fourth in the first lap, and managed to finish second, while Greening came in an easy winner.

S. M. Greening (346 Francis-Barnett sc.).
H. Martin (1,074 Morgan-Anzani).
R. Dequin (349 Ivy sc.).
Winner's speed, 54.05 m.p.h.

### Private Owners' Handicap.

A private owners' three-lap handicap followed, open to a private owner member driving any class of machine, his own private property.

Jones (Coulson) kept the lead for two laps, and then dropped to fourth place. In the second lap Williams (Sheffield-Henderson), Whitaker (Sunbeam), Sheraton (Norton), Capper (Morgan), and Grogan (Norton) rode in a bunch after the leader, but Whitaker disengaged himself from the group and rode in an easy winner.

J. E. Whitaker (496 Sunbeam).
G. H. Williams (348 Sheffield-Henderson).
Lt. R. T. Grogan, R.N. (490 Norton).
Winner's speed, 66.02 m.p.h.

A five-lap passenger handicap was the last race. E. B. Ware (Morgan), scratch, retired with a broken propeller-shaft in the first lap, in which Dequin (Ivy sc.) was the leader. Dicker (Rudge sc.) led in the second lap, and in the third dropped to fourth place; afterwards Martin (Morgan) took the lead, which he maintained to the end, and won easily. Meanwhile Le Vack (Zenith-Jap sc.) forged ahead and had a splendid tussle for second place with the veteran rider de Lissa.

H. Martin (1,074 Morgan-Anzani).
H. Le Vack (988 Zenith-Jap sc.).
O. de Lissa (994 Motosacoche sc.).
Winner's speed, 70.58 m.p.h.

## 200 Miles Sidecar Races.

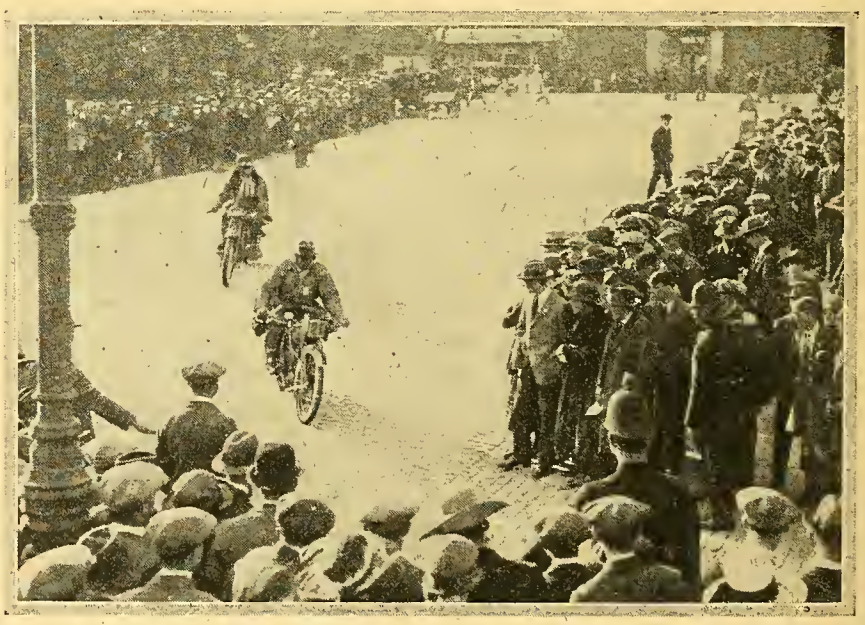
SOME forty entries have been received for the 200-mile sidecar races promoted by the Ealing and District M.C.C., to be held on Saturday at Brooklands.

There are three classes, viz., 350 c.c., 600 c.c., and 1,000 c.c., and the machines in each category will be started at 12 o'clock (noon), 1 p.m. and 2 p.m. respectively. By starting the machines in this way it is anticipated that all three winners should finish at about 4.30 p.m. Entries have been made by such well-known riders as Le Vack, Temple, Dixon, Don, Stewart, Davidson, Pullen, O'Donovan, Horsman, Emerson, and Prestwich, so that some high speeds may be expected.

# THE HARE THAT JUMPED.

ALTHOUGH he found that the greater portion of the London-Edinburgh run, through which he drove a Brough Superior sidecar, was "monotony itself," W. A. Fell Smith has described for us this extraordinary incident that befell him between Leadburn and Penicuik. "On approaching a cross-roads where several people were standing," he writes, "my passenger pointed to a very large hare which was crossing the field to our left. We reached the corner of the field simultaneously with the hare, which ran into the road, apparently jumped to avoid the sidecar wheel, and struck my passenger full in the face with sufficient force to knock him senseless for two or three minutes!

"Fortunately no serious damage was done beyond a broken pair of Triplex goggles and a black eye, and after a 'wee drap' of whisky had been administered by a kindly onlooker we were soon able to proceed. The only thing that really worried my passenger was that the hare wasn't killed for him to take home as a souvenir! Can anyone equal this for a remarkable accident, I wonder?"



Great enthusiasm was shown by the public on the arrival of the London-Edinburgh competitors at the Scottish capital. Far bigger crowds gathered than were seen at the start at Hendon.

# THE CLUB-TEAM CHAMPIONSHIP.

## M.C.C. Team Trial for "The Motor Cycle" Cup.

"THE MOTOR CYCLE" CHALLENGE CUP. Presented in 1909 by the proprietors of "The Motor Cycle" after the original "Motor Cycle" Cup had been won outright in 1908.

WHICH club will produce the champion team this year? Since the popular M.C.C. team trial for *The Motor Cycle* Cup was inaugurated in 1904 there has been very keen rivalry between the more enterprising clubs for the honour of holding the trophy, which can be won outright by three successes.

This year 27 clubs are competing in the event, which takes place on Saturday, the 24th.

In 1908 the Coventry Club won the first Cup outright, and a second trophy was presented by this journal in 1909. Since this date the M.C.C. has been twice successful, as have members of the Coventry and Warwickshire M.C. and the Sheffield and Hallamshire M.C.C. One of the clubs, therefore, has only to win this year to secure the trophy for all time.

In the days when the M.C.C. team trial was first instituted both *The Motor Cycle* and the industry were very young. At that early stage every encouragement was needed for the pastime to obtain new supporters.

The Motor Cycling Club was not only the leading club in 1904, but a hoary veteran even at that period (it was founded in 1901); it was only natural, therefore, that *The Motor Cycle* should present the challenge trophy to this group of enthusiasts.

The original conditions of the trial stipulated that teams should consist of four solo and two passenger machine riders, who should endeavour to make non-stop runs over a course of 100 miles.

### The Lonely Sidecar.

Only one sidecar competed in the first event, most of the passenger machines being tricars or motor bicycles towing trailers. Naturally, of the competing clubs the Coventry team produced the most skilful riders, men whose names are famous even to present-day readers of this journal. Frank Hulbert, who joined the Triumph Co. in that year and only retired in 1921; S. Wright, who then drove an Excelsior with trailer, who now with his companion, B. Yates, is still connected with Humber & Co.; R. W. Ayton, a clever inventor and the originator of aluminium cylinders with steel liners; A. W. Wall, inventor of the Auto-Wheel, who drove a Roc and trailer; and W. H. Wells, of Indian fame, who then rode a 2¾ h.p. Vindec.

It will be seen from the number of clubs supporting the event how small the movement was in those days, but the advent of the magneto just about that time gave a great fillip to the industry, and when *The Motor Cycle* presented another trophy in 1909, 17 club teams lined up for the start.

Not only did 1908 mark the general adoption of magnetos, but it saw also the increased popularity of the sidecar and the waning of the tricar; in 1909 each team produced one sidecar machine.

A record entry was received in 1913, when 41 teams entered, consisting of 246 competitors, 82 passengers and 100 reserve men.

### Welcome Innovations.

Revived after the war, in 1919, the M.C.C. team trial made important progress. The composition of the teams was altered to three solo and three passenger machines, and a really sporting course was found in the Chilterns, starting from Tring and including many surprises. This innovation of awarding the trophy more by merit in overcoming difficulties than by speed judgment, into which the element of luck so largely enters, was greatly appreciated. The circuit, consisting of many single-figure gradient hills with rough surfaces, was 32½ miles in length and was covered three times. Again the Coventry club added to its long list of victories, the Ilkley L.C. and M.C.C. being second and the M.C.C. third. So soon after the war, machines were difficult to get, and only 15 teams entered.

In 1920, exactly the same course was utilised; 28 teams competed, and there was considerable improvement in the organisation and arrowing. The trial has always been run on rigid non-stop lines, and all fuel has to be carried on board and replenishments made while riding. In 1920 the winners were the Leicester and District M.C.C.

### Direction of Course Reversed.

Last year 26 teams rode over the same course, but, as suggested by *The Motor Cycle*, in the reverse direction, rendering the trial equally severe, but being a welcome change. As was to be expected in 1921, the day was exceedingly hot, and tyre troubles were prevalent. There were numerous casualties apart from punctures, and the Sheffield and Hallamshire M.C.C. was the only team to finish complete—their second win in Team Trial history.

Up to date the winners year by year have been as follows:—

| Date. | No. of Teams Competing. | Champion Club. |
|---|---|---|
| 1904 .. | 5 | Coventry M.C. |
| 1905 .. | — | M.C.C. (Walk-over) |
| 1906 .. | 5 | Motor Cycling Club. |
| 1907 .. | 5 | Coventry M.C. |
| *1908 .. | 9 | Coventry M.C. |
| 1909 .. | 17 | Motor Cycling Club. |
| 1910 .. | 18 | Coventry and Warwickshire M.C. |
| 1911 .. | 20 | Derby and District M.C.C. |
| 1912 .. | 25 | Nottingham and District M.C.C. |
| 1913 .. | 41 | Sheffield and Hallamshire M.C.C. |
| 1914 .. | 31 | Motor Cycling Club. |
| 1919 .. | 15 | Coventry and Warwickshire M.C. |
| 1920 .. | 28 | Leicester and District M.C.C. |
| 1921 .. | 26 | Sheffield and Hallamshire M.C.C. |

* In 1908 the Coventry M.C. won the first cup outright, and the proprietors of *The Motor Cycle* presented a second trophy in which the Coventry and Warwickshire M.C.C., the M.C.C. and the Sheffield and Hallamshire Club each hold two shares.

# FOURTEEN HILLS IN A ONE DAY TRIAL.

## The Coventry and Warwickshire Motor Club's One Day Trial in the Cotswolds.

OPEN to all members of clubs affiliated to the Midland Centre A.C.U., the Coventry Club's one day trial was well organised, well marked, and well laid-out, and was altogether worthy of better support than was received. Of the thirty-two motor cycle and sidecar entries and three three-wheelers, three failed to start and three more failed to complete the very sporting course, while of the finishers quite a number spoiled their clean scores by mistakes at one or other of the numerous tests.

Quite soon after the start C. R. Little (688 Coventry Victor sc.) retired, having damaged an experimental aluminium piston. Saintbury Hill was the scene of the first test, a stop and re-start affair, which, in spite of a specially prepared surface of loose stones and small boughs, failed to penalise anyone. The best performances were put up by E. A. Barnett (346 Francis-Barnett), A. D. Mayo (346 Coventry Eagle), H. Stretton-Ward (499 Triumph), W. Brandish (600 Humber), H. Uzzell (964 New Imperial sc.), A. Watson (599 Sunbeam sc.), and S. Wright (600 Humber sc.).

### Few Failures in Midland Test Hills.

Thereafter the usual Midland trial route was followed, up Sudeley Hill and *via* Roel Gate, but missing Cheltenham, the competitors were taken from Andoversford past the Air Balloon Inn to the foot of Birdlip.

Neither Sudeley nor Birdlip hill is a serious proposition to the modern machine when the roads are dry, and the next point of real interest was the rough and narrow lane, known as Stancombe Hill, which lies within a few miles of Stroud.

Here came the first batch of hill failures, for, besides being steep, the surface of the lower part of the hill is a little tricky, even in dry weather. T. Brown, who, though entered in the solo class, had elected to fit a sidecar to his 539 c.c. Rex-Acme, came to a momentary stop with wheel slip. His passenger, in an endeavour to save the situation, leant out hurriedly, shedding his watch and other odds and ends, which were hurled after him by the official observer.

Other momentary stops were debited to C. Dyer (600 Humber), R. Roberts (549 Triumph sc.), and T. Gibbins (976 Rex-Acme sc.). With these exceptions, the majority of machines played with the gradient, though at the top of the hill the Rev. J. M. Philpott's 249 c.c. Velocette was misfiring rather badly. He retired at the lunch stop in Stroud, and it was subsequently discovered that the trouble was due to the magneto points closing up.

### Test for Flexibility.

Within a mile of the lunch check came a flexibility test on Rodborough Lane, in which the following appeared to be the best performances in their respective classes. *Slow Section* :—E. A. Barnett (346 Francis-Barnett), G. R. Butcher (499 Sunbeam), A. W. Thrush (499 Sunbeam), A. Watson (599 Sunbeam sc.), H. Uzzell (964 New Imperial sc.), and S. Wright (600 Humber sc.). *Fast Section* :—A. W. Thrush (499 Sunbeam), C. Dyer (600 Humber), D. Brandish (600 Humber), T. Hazelwood (950 Hazelwood sc.), H. Uzzell (964 New Imperial sc.), and A. Watson (599 Sunbeam sc.).

Coventry and Warwickshire Midland Centre Trial. A. Watson (599 c.c. Sunbeam sidecar) at the start of the brake test on Saintbury Hill.

### Hills in the Stroud District.

In the next twenty miles were included no less than eight hills, of which Knapp was the most severe test. It is impossible for a spectator to see all the points of interest on this long climb, but the following observations were made at the hairpin near the top :—Here the small solo machines shone, in particular E. A. Barnett and D. A. Atkin (346 Francis-Barnetts), F. Whitworth (245 Calthorpe), T. Moxon (346 Monopole), E. Broughall and A. Mayo (346 Coventry Eagles), A. Thrush (499 Sunbeam), R. Grindlay and W. Brandish (600 Humbers). D. Brandish, on a similar machine, had his gear jump out and ran back. Good sidecar performances were made by T. Brown (539 Rex-Acme sc.), F. Sibley (499 Rudge sc), H. Uzzell (964 New Imperial sc.), while G. Goodall (999 Morgan) went up without a falter.

The failures were : G. Butcher (499 Sunbeam), fell. T. Nickson (494 Douglas), foot down. C. Dyer (600 Humber) fell. T. Smith (245 Calthorpe), T. Hazlewood (950 Hazlewood sc.), and R. Roberts (549 Triumph sc.). On Gambles Lane not a single failure was noted, the dry surface making the notorious hill too easy except for the loose and rutty surface near the top. Saintbury was the scene of the last test, a brake test, which was of considerable interest. Competitors had to cover a distance of 73 yards in not less than 15 seconds and pull up between two tapes placed nine feet apart. A local but heavy rainstorm made the task no easier, though trees protected the road at the most important point.

### Severe Brake Test.

The best performances appeared to be those of D. Brandish (600 Humber), F. Whitworth (245 Calthorpe), R. Grindlay (500 Humber), T. Nickson (494 Douglas), H. Stretton-Ward (499 Triumph), A. D. Mayo (346 Coventry Eagle), D. Atkin (346 Francis-Barnett), R. W. Duke (499 Triumph), H. Uzzell (964 New Imperial sc.), S. Wright (600 Humber sc.), A. Watson (599 Sunbeam sc.), and G. H. Goodall (993 Morgan). The last-mentioned performance was exceptionally fine and was assisted materially by large diameter front wheel brakes.

The homeward route via Shatford and Warwick was without incident. The route was marked with blue stain only, and this method was most successful.

# A SCIENTIFIC LAYMAN CRITICISES.

## Some Points of Interest Raised by the T.T. Races.

IT is probable that the particular points which interest different spectators of the T.T. preparations and races are in no two cases exactly similar. The following points are those which particularly appealed to a man with practical, yet scientific, ideas who is more concerned with the efficiency and performance of the machines than with the riders of them.

An outstanding thing was the large number of reports of breakages of parts of the machines. These may be divided into two sections, which are: those dealing with engine breakages and those dealing with the fracturing of frame members and other components. Now to the careful observer it was interesting in the extreme to notice the ingenious devices which were incorporated in the machines to ensure quick replacements in the case of fracture, but on no occasion did one actually hear of the prevention of breakages by any other method than that of excessive section and weight of various components.

### Special Steels and Heat Treatment.

It is obvious that in the majority of cases no special steels or alloys were employed in the manufacture of those parts which gave most trouble, otherwise breakage would not have occurred. If correctly treated alloy steels were used instead of plain carbon steels, or wrought iron, it is almost certain that the great majority of breakage troubles would vanish. The great trouble experienced with valves constitutes an excellent example of wrong material or wrong treatment. If valves are made of stainless or, preferably, tungsten steel carefully and correctly heat-treated, they will not break, because their tensile strength at high temperatures—even when red hot—is ample to withstand all the strains they can possibly be subjected to. Therefore the sooner manufacturers consult first-class metallurgical chemists as to the composition and correct treatment of their valves, the sooner the troubles will vanish and incidentally valves of smaller section, and much lighter, could be employed owing to the terrific strength at high temperatures possessed by these special steels, the lack of this being the cause of all the trouble with other steels.

Similar remarks to the above apply to such unnecessary fractures as those of mudguard stays, bolts, frames, etc., and if steels like high and low carbon nickel-chrome, chrome vanadium, and others are employed, then these troubles will almost certainly vanish.

### Vegetable or Mineral Oils?

A third point of interest, which was frequently commented upon, was the very prevalent smell of castor oil noticed in nearly all the exhaust gases. This is rather surprising, because what the exact advantages of this oil are it is difficult to say, but its disadvantages are well known. Undoubtedly, the smell of burnt castor oil is rather more pleasant than otherwise, and its great popularity is partly due to this fact and partly due to the fact that it has been used by so many record breakers in the past. It is, however, certain that other oils could have been used with equal or superior results than those obtained with oils containing castor oil. The only distinct advantage of this oil is that it is practically insoluble in petrol, and for this reason it is used for certain rotary and radial aero engines in which the oil is liable to come into contact with the liquid petrol. For other aero engines it is seldom used.

The chief disadvantage of castor oil is that owing to its being of vegetable origin it contains several components which, when heated sufficiently highly, are decomposed and split up into what are known as fatty acids. These fatty acids are extremely detrimental to all parts of an engine because they attack and corrode all parts with which they come in contact, resulting in worn pistons, cylinders, bearings, etc. Proof of this fact is found if one examines the tin or metal bung in which castor-oil has been kept. The etching of the parts is very apparent, and any brass becomes coated with a blue matter which is a combination of copper and these fatty acids. If this occurs at normal temperatures it is obvious that it is infinitely more liable to occur at extreme temperatures which readily break up the constituents of castor oil. Furthermore, many people imagine that this oil is one of the "thickest" obtainable. This is partly true at low temperatures, but at high temperatures it is wrong, and if the viscosities of this oil be compared with those of thick mineral oils it will be found that they are in favour of the mineral oils, which do not break up into objectionable acids when heated.

Of course it will perhaps be stated that although the smell of castor oil is noticeable, actually the percentage of this ingredient is small; but even so its advantages are doubtful and its disadvantages are obvious; so why use it at all when better oils are available?

KEMIST.

---

# GUARDING T.T. MACHINES.

THE following extract from a letter received from Mr. T. W. Loughborough, Secretary of the Auto Cycle, is intended to clear up any misconception which may exist regarding the storage of T.T. machines by the Union during the period between "weighing in" and handing over to the riders on the morning of the race:—

> Under the heading "Points to Criticise," you rather infer that the machines entered for the T.T. are left for some time in a marquee unguarded, and you suggest that some better arrangement to prevent possible interference with them should be adopted next year. As a fact, during the whole time that the machines are in the storage marquee they are guarded—not only by two particularly stalwart police sergeants in plain clothes, but also by a leading official of the Union. No entrant, no competitor, or any member of the general public whomsoever is allowed access on any pretext to enter the marquee. At night the police guard is retained, and a principal official of the Union remains constantly in the tent.
>
> This, I think, should satisfy any of your readers who may be inclined to doubt whether the A.C.U. adequately protects the competing motor cycles while they await their ordeal.

# CLUB NEWS.

### Lee, Lewisham and District M.C. and L.C.C.

A reliability trial is being held on June 25th for the Ranger Cup, full particulars of which can be obtained from the honorary secretary, Mr. H. W. Allen, 23, Boones St., Lee, S.E.

### Middlesbrough and District M.C.

Speed trials, organised by this club, and open to all clubs affiliated to the Yorkshire Centre A.C.U., commence at twelve noon on Saltburn Sands on Saturday, July 1st, when motor cycles, sidecars, and light cars may be entered. Last year, it is claimed that these trials were witnessed by as many as 50,000 spectators.

### Cumberland County M.C.C.

The Whit-Monday trial was run over a course of 130 miles of Lakeland bye-roads. Kirkstone Pass and Red Bank were observed in the morning, but no failures occurred. Wrynose Pass, the stumbling block in last year's open trial, proved too much for all except W. Tiffen (Velocette) and J. Fendley (Rhode light car).

### North West London M.C.

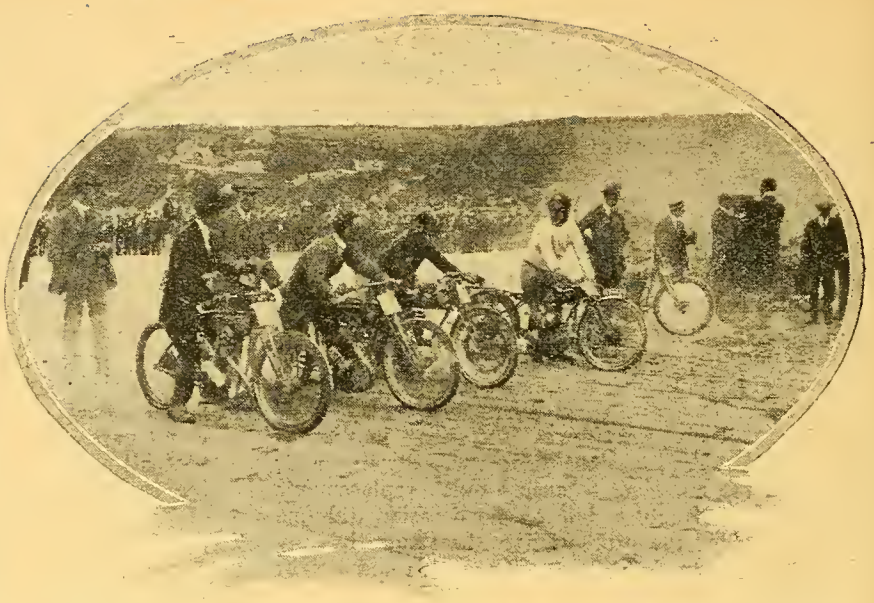
Last Saturday's hill-climb on an entirely fresh hill in Herts showed some close finishes. Entries were limited to 500 c.c. Judged on time the results were as follows: Solo: 1, D. F. C. Fitzgerald (490 Norton); 2, J. A. Peacock (398 A.B.C.). Sidecar: 1, H. James (490 Norton); 2, D. F. C. Fitzgerald (490 Norton). Handicap: 1, H. J. Pooley (498 P. and M.); 2, A. Cartwright (492 Sunbeam).

### Sale and District M.C.C.

Two all-night runs are being organised, one to take place on Saturday, July 8th, to Windermere and the Lakes, and the other on Saturday, August 5th to Snowdon. All motor cyclists and neighbouring clubs are invited to co-operate. Names and addresses of those intending to participate should be sent to the honorary secretary, Mr. E. C. Bramley, Landfield House, Hesketh Road, Ashton-on-Mersey.

### Cork and District M.C.C.

First-class awards in the open trial held on Whit-Monday were as follows: First Class: J. Gibbings (349 A.J.S.), W. Waterman (595 Douglas sc.), tied for the cup; J. A. Wilson (398 A.B.C.), J. A. Carville (557 B.S.A.), J. P. Frost (499 Blackburne sc.), T. O.'Sullivan (349 A.J.S.), R. Daly (550 Triumph), A. Holmes (976 Enfield sc.), and J. F. Slein (249 Velocette).



Competitors warming up their engines preparatory to the start of the 50 mile race on Pendine sands on Whit-Monday. This event was described last week in "The Motor Cycle."

### Epsom and District M.C.C.

The opening meeting of this new club was held at Ewell on Wednesday, June 7th, and was very successful. Applications for memberships, etc., should be addressed to Mr. G. E. Himing, at The Laurels, Park Hill Road, Ewell.

### Worcester and District M.C.C.

The last day for receiving entries for the speed trials, to be held on Thursday, June 22nd, is Saturday, June 17th. The Flying Half-mile will take place on the Gloucester Drive, by kind permission of Earl Beauchamp, K.C.

### South West London M.C.C.

An invitation run is being held on June 18th, starting from the White Horse, Brixton, at three o'clock, and proceeding to Crawley, full particulars of which may be obtained from the honorary secretary, Mr. H. S. Carter, 37, Half Moon Lane, Herne Hill, S.E.

Geo. Kelly and Douglas Alexander at the Scottish Auto Cycle Union hill climb at Dalgrain Brae, Sorn on Saturday last. Awaiting the word to go but more interested in the photographer than the timekeeper at the moment.

### Newcastle and District M.C.

In the Travers open reliability trial held recently, the club report omitted the fact that J. A. Newman (499 Douglas) was awarded a silver medal. Next week-end will be held the seventeenth annual all-night reliability trial from Newcastle to Edinburgh *via* Berwick, returning through Otterburn, starting from the club headquarters at 8 p.m. on Saturday.

### Surrey M.C. and L.C.C.

The eighth annual Exeter reliability trial for the Swain and Jones and Feeny Challenge Cups will take place on Saturday, June 24th. The event is open to all types of machines up to 1,500 c.c. capacity, and entries should be sent in by June 20th. The start will be made from Guildford at midnight on June 23-24.

### Blaina and District M.C.C.

On Tuesday of last week, a reliability trial was carried out over a 150-mile course, when twenty-one competitors lined up at the start from Blaina, and only eleven checked in at the finish. Gold medals were awarded as follows: H. Dickinson (Scott), C. Bowen (Triumph), A. Colcombe (Indian), J. Marsh (Sunbeam), A. Miklin (Triumph), A. Ford (Triumph), H. Westwood (James sc.), and A. Williams (G.N.). A silver medal was won by F. Hawkins (Raleigh).

### Scottish A.C.U.

On Saturday, June 10th, an open scratch hill-climb was carried out by the S.A.C.U. on Dalgaim Brae. The entries numbered 114, and some excellent times were accomplished over a course half a mile in length. Electrical timing was used, and the fastest time was 30 1-16th secs. registered by G. M. Black (490 Norton), who obtained first place in no less than five classes, besides doing fastest time of the day from flying and standing starts. He was closely followed by E. A. Small (492 Sunbeam). Hundreds of spectators witnessed the event, which was carried out under very favourable weather conditions.

### Northern Centre A.C.U.

Under the auspices of the centre, speed trials were held on Saturday last at Eskweals, Cumberland, organised by the Barrow and District M.C. The course was half a mile in length, and the weather conditions were excellent. Results:

Not exceeding 350 c.c. (solo).—1, Shepherd 348 Edmund), 33.96s.; 2, Sayers (249 Velocette), 39.45s.

Not exceeding 550 c.c. (solo).—1, H. Jackson (499 Sunbeam), 30.85s. (fastest time of the day); 2, A. Baxter (490 Norton), 33.45s.

Not exceeding 750 c.c.—1, H. Jackson (499 Sunbeam), 31.25s.; 2, A. Baxter (490 Norton), 32.5s.

Unlimited c.c. (solo).—1, H. Jackson (499 Sunbeam), 32.20s.; 2, W. Barron (998 Indian), 32.24s.

Unlimited cc. (sidecars and three-wheeled cycle cars).—1, H. Jackson (499 Sunbeam), 35.9s.; 2, W. Barron (998 Indian), 37.22s.

TRAINING FOR THE 1932 T.T.! Illustrating the controllability of the modern sidecar. Master Harry Younie, aged 14 years, weight 4st. 10lbs., climbing the 1 in 3 portion of Manifold Hill, a Derbyshire test piece with an average gradient of 1 in 5, on a sports Martinsyde outfit.

## Birmingham M.C.C.

Copies of the artistically-produced official handbook are now available, while the supply lasts, to anyone who applies to Mr. W. A. Egginton, 76, Earlsbury Gardens, Birchfield, Birmingham.

## Brighton and Hove M.C.C.

The South-Eastern Centre A.C.U. hill-climb, which is being organised by this club will be held near Brighton on Saturday, June 24th. Full particulars of the event may be obtained from the hon. sec., Mr. Cecil Volk, 24, York Villas, Brighton.

## Kidderminster M.C.C.

At Angel Bank, near Cleobury Mortimer, on the 17th inst., a hill climb of about half a mile will be held, open to all clubs in the Midland Centre A.C.U. The secretary of the meeting is Mr. A. J. Wilkes, Pelham Lodge, Kidderminster, from whom full particulars may be received.

## West Kent M.C.

On Saturday, July 1st, the combined Kent clubs are holding a race meeting at Brooklands for their members. The races vary in length from one to three laps, and will include both scratch and handicap events for "sports" and "touring" machines. Entries for these events should be sent by Tuesday next to Mr. E. Jessop, c/o Love and Co., Park Road, Bromley, Kent, who will furnish full particulars.

## North Eastern Centre A.C.U.

The team from South Shields, which won the team trials organised by this Centre, included T. Braid (Indian Scout), G. Heath (8 Matchless sc.) and S. Dunn (3½ N.U.T.). Second place was taken by the Newcastle and District Club team, composed of W. Richardson (3½ N.U.T.), T. Toovey (3½ Norton sc.) and R. P. Reid (Scott Squirrel). The course was from Newcastle to Allendale and back.

## Surrey M.C. and L.C.C.

A hill climb was held on Saturday, June 3rd, when the fastest time of the day was made by C. B. I'Anson (Zenith-Bradshaw). C. J. Feeny (Francis Barnett) took first place in the 350 c.c. class, and the winner of the larger solo class was C. R. Jenkins (4 Triumph), followed by C. B. I'Anson (Zenith-Bradshaw). Class VII., reserved for "1914 machines," was won by S. Manners-Smith (1912 Triumph).

## Warrington M.C.

A stiff course covering 92½ miles of difficult country was chosen for the reliability run for the Blake cup, recently held from the Angel Hotel at Koutsford. The North Cheshire Club officiated. First man home was W. Bolton (Westwood) with a total loss of six marks, followed by F. Doward (3½ N.U.T.), also with a loss of six marks (missed first place by being two minutes behind time at a secret check). H. Lee (3½ Sunbeam), who put up a very good performance, came in third with a loss of only nine marks.

## Musselburgh and District M.C.C.

Although but recently formed, this club has a membership of sixty-one, and held a successful hill climb not long ago, when 40 machines took part. The fastest time was made by J. Murray (Harley-Davidson) at 18⅕ secs. D. Lowe made a close second at 19⅖ on a Sunbeam. H. J. McIntosh (8 Excelsior sc.) won the passenger class in 32⅘ secs, and T. K. Hubbard (2¼ New Imperial) also did very well.

## Scarborough and District M.C.

The Scarborough Rally organised by the Scarborough and District M.C. will be held on the 24th inst, to which an invitation to all motorists has been issued. Clubs are asked to be in their allocated positions on the Marine drive by 3 o'clock. On the 25th a freak hill climb has been arranged, to take place at Johnson's Beck, near Fyling Hall Station, to start at 3 p.m. A silver cup, silver medal, and bronze medal will be awarded in each of the following classes: (1) solo machine, (2) sidecars (including three-wheelers), (3) four-wheeled cars.

## Mid Bucks M.C.C.

A reliability run for the Putnam Cup was held on Saturday, June 3rd, when, out of 39 entries, 38 competitors started and 34 finished. The course included such hills as Kingston, Kop, and Ashton Clinton. R. T. Roberts (Zenith-Jap) was first, losing only two points, and he was closely followed by C. H. Wright (A.B.C.), who lost three points. In addition to the cup, Roberts carries off a gold medal for his performance, and Wright a silver one. A bronze medal was awarded to H. J. Coales (Triumph), who came in third with a loss of six points, a very creditable performance on a 1912 model.

## Evesham M.C.C.

Some fast times were put up at the recent climb on Hipton Hill, a hill one-third of a mile long and with a 1 in 4 gradient on the rough crest. The fastest speed averaged 58.8 m.p.h., last year's record of 24s. being beaten by 3⅖s. Winners:—

350 c.c. Private Solo.—H. Bleckley (2¾ Sheffield Henderson), 25⅘s.

350 c.c. General Solo.—H. Bleckley (2¾ Sheffield Henderson), 24s.

500 c.c. Private Solo.—E. A. Locke (3½ Sunbeam), 21⅕s.

500 c.c. General Solo.—F. Morrall (I.O.M. model 3½ B.S.A.), 21s.

750 c.c. Private Solo.—E. A. Locke (3½ Sunbeam), 21⅗s.

750 c.c. General Solo.—R. E. Eveson (3½ Norton), 20⅗s.

500 c.c. General Sidecar.—L. Paynter (3½ Norton), 25⅘s.

1,000 c.c. General Sidecar.—R. E. Eveson (3½ Norton), 25s.

Best on Formula.—L. Paynter (3½ Norton), 19.76.

## Brixton M.C. and L.C.C.

This club, although quite recently formed, has an interesting programme for the next two months. On June 18th a run to Tunbridge Wells, with tea at Sevenoaks, has been arranged.

## Newcastle and Northern M.C.

What promises to be a very successful and interesting event is being organised in the form of a club gymkhana to be held on Saturday, which is open to all clubs affiliated to the North Eastern Centre A.C.U. Particulars may be obtained from Mr. E. S. Nash at 6, Moore Avenue, Dunston-on-Tyne.

## Ilkley M.C. and L.C.C.

Although there was not a large entry, the hill-climb held on Sunday, June 4th, produced some good riding. L. A. Runton (2¼ Velocette) was the winner of the Dixon trophy and gold medal, whilst C. Heap (3½ Sunbeam) was awarded the silver medal. The bronze medal was won by J. H. Holmes (3¾ Scott).

## Gravesend and District M.C.C.

The club has made an interesting innovation in deciding to adopt *The Motor Cycle* policy of insurance for all accidents, etc., to its members. Arrangements have been made with the Autocar Accident and Insurance Co. for the adoption of the policy advocated by *The Motor Cycle*, and the scheme will result in the club members getting more than favourable terms for their insurances. The club is affiliated to the A.C.U., and a scheme is on hand by which a unique trophy will be given in place of medals to members who win competition prizes. The trophy is to consist of a silver oxydised mascot of S. Christopher, the Patron of Travellers.

## Westmorland M.C.C.

The annual speed trials were held at Lowther Park by kind permission of the Earl of Lonsdale, when some good times were put up over a half-mile course. Results: 275 c.c. Solo Class: 1, Ayer (Velocette), 40.82s.; 2, Turner (Velocette), 41.20s. 350 c.c. Class, Solo: 1, Baxter (Sheffield-Henderson), 31.90s.; 2, J. C. Dearden (Massey-Arran), 35.30s.; 3, Mrs. Roberts (Sheffield-Henderson), 35.58s. 500 c.c. Solo Class: 1, H. Jackson (Sunbeam), 31.10s.; 2, A. Hawkins (Norton), 32.58s.. Unlimited Solo Class: 1, H. Jackson (Sunbeam), 31s.; 2, A. Hawkins (Norton), 32.50s. Novices' Unlimited Solo Class: 1, J. C. Dearden (Massey-Arran), 34.20s.; 2, J. Dunning (o.h.v. Triumph), 35s.. 500 c.c. Sidecar Class: 1, H. Jackson (Sunbeam sc.), 39.11s.; 2, J. Baxter (Norton sc.), 39.11s. Unlimited Sidecar Class: 1, H. Jackson (Sunbeam sc.), 35.32s.; 2, S. Barron (Indian sc.), 36.05s.

## Falkirk and District M.C.

A hill-climb was held recently with the following results: Class 1: Members (expert barred), 350 c.c. formula, W. Fleming (2¾ Wolf). Class 2: Members (expert barred), 350 c.c., time, J. S. Hunter (2¾ Douglas). Class 3: Open, 350 c.c., formula, J. G. Porter (2¼ New Gerrard). Class 4: Open, 350 c.c., time, H. E. Fairley (2¾ Hawker). Class 5: Members (expert barred) 600 c.c., formula, R. Mather (3½ Norton). Class 6: Members (expert barred), 600 c.c., time, J. W. Morton (3½ Douglas). Class 7: Open, 600 c.c., formula, H. E. Fairley (2¾ Hawker). Class 8: Open, 600 c.c., time, D. Cairns (3½ Douglas). Class 9: Members (expert barred), unlimited, formula, R. Mather (3½ Norton). Class 10: Members (expert barred), unlimited, time, J. W. Morton (3½ Douglas). Class 11: Open, unlimited, formula, H. E. Fairley (2¾ Hawker). Class 12: Open, unlimited, time, J. Alexander (3½ Sunbeam).

## Rochester, Chatham and District M.C.C.

An inter-club hill-climb over a course of nearly half a mile was held recently at the Cut, Stonebridge, near Maidstone, in which the West Kent, Canterbury, and Rochester clubs took part. Fastest time of the day was put up by Capt. Maund (A.B.C.) whose time was 25⅘s. Results:

250 c.c. CLASS.—1, S. T. Smith (2¼ New Imperial), 44s.; 2, H. Ash (2¼ Enfield), 46s.

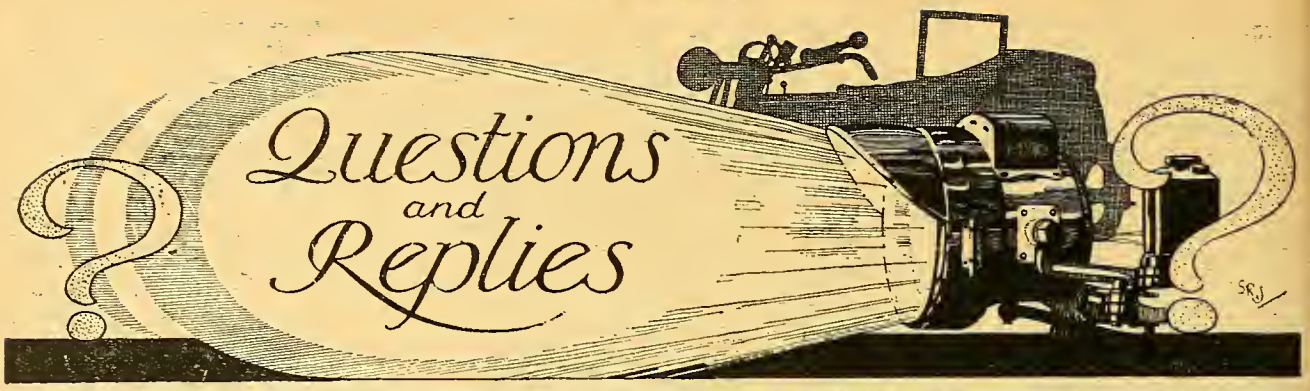
350 c.c. CLASS (experts barred).—1, A. Fraser (2¾ Sheffield-Henderson), 29s.; 2, Mid. Bolus (2¾ Sheffield-Henderson), 31s. Experts: 1, A. Fraser (2¾ Sheffield-Henderson), 28⅘s.; 2, F. S. Short (2¾ Rex-Acme), 31⅖s.

600 c.c. CLASS (experts barred).—1, W. H. Sheriton (3½ Norton), 26⅘s.; 2, A. Fraser (2¾ Sheffield-Henderson), 27⅗s. Experts: 1, Capt. Maund (3 A.B.C.), 26s.; 2, W. H. Sheriton (3½ Norton), 26⅘s.

1,000 c.c. CLASS (experts barred).—1, W. H. Sheriton (3½ Norton), 26s.; 2, C. Volk (3½ Douglas), 28⅖s. Experts: 1, Capt. Maund, (3 A.B.C.), 25⅖s., 2, W. H. Sheriton (3½ Norton), 26s.

600 c.c. CLASS (Sidecars).—1, A. Clark (4 Triumph sc.), 27⅗s.; 2 C. Volk (3½ Douglas sc.), 28⅘s.

1,000 c.c. CLASS (Sidecars).—1, A. Clarke (4 Triumph sc.), 36⅘s.; 2, C. Volk (3½ Douglas sc.), 38⅘s.



A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 2d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

### BENT REAR FORKS.

The previous owner of my second-hand Triumph, in putting it up on its stand, let the machine down so heavily that the forks running from the engine to the hub of the back wheel are bent. If I have these straightened, will the machine be safe to ride, or would you recommend having those forks entirely replaced?—I.V.L.

In all probability it would be better to have new tubes brazed into the rear forks of the machine, although if they are not badly bent they could be quite easily straightened if warmed by a brazing lamp.

### TIMING A PRE-WAR MACHINE.

(1.) Will you kindly inform me of the best valve timing for my 1912 Singer? The variation of the ignition lever is too great, so that if timed as usual, i.e., piston t.d.c. spark two-thirds retard, the spark obviously occurs too soon with lever fully advanced. (2.) What is the greatest distance the piston should be down the cylinder on compression stroke with the lever fully advanced? (3.) When turning the engine shaft in the proper direction, the contact breaker gives a considerable jump forward on reaching a certain point. Should the points break before this point is reached or afterwards?—S.D.T.

(1.) Time your valves as follows:—Rotate the engine until the piston reaches the top-dead centre, and in this position insert the cam wheels so that the exhaust valve is just about to close and the inlet just commencing to open. (2.) Connect the magneto drive when the piston is $\frac{3}{32}$in. from the top of compression stroke, and the contact breaker points are just separating, having the ignition control fully advanced. (3.) When fully advanced, separation of the contact breaker points should be coincident with the tendency of the armature to jump forward.

### TO REMOVE GEAR BOX BALL RACES.

I am overhauling my Sturmey-Archer countershaft gear box and am desirous of renewing some of the ball races. I am, however, unable to get the old races out. How is this done?—C.H.

The proper method is to warm up the aluminium casing and then strike this smartly on the corner of a bench, when, owing to the high expansion of the aluminium, the bearings usually become quite loose. If this is not successful the only alternative is to drill two holes at the back of the bearing and punch it out, afterwards filling up the holes with screws, rivets, or solder.

## Important Dates.

**Sun., June 11th, to Mon., June 19th—Paris-Pyrenees Trial.**
**Sat., June 17th—Yorkshire Centre A.C.U. Open "Colonial Trial."**
**Sat., June 17th—Ealing and Dist. M.C.C. 200 Mile Sidecar Race, Brooklands.**
**Fri., June 23rd, and Sat., June 24th—Irish Twenty-Four Hour Open Trial.**
**Sat., June 24th—M.C.C. Inter-club Team Trial for "The Motor Cycle" Cup.**
**Sat., June 24th—Midland Centre A.C.U. Open Reliability Trial.**
**Sat., July 1st—East S. Wales Centre A.C.U. Open Speed Trials.**
**Wed., July 5th—Eastern Centre A.C.U. Open Speed Trials.**
**Wed., July 12th—French Grand Prix.**
**Sun., July 23rd—Belgian Grand Prix.**
**Fri., July 28th, to Mon., July 30th—Anglo-Dutch Trial in Holland.**
**Thurs., Aug. 3rd, to Wed., Aug. 9th—International Six Days Trials.**
**Sat., Aug. 5th, and Mon., Aug. 7th—Irish Two-day Open Trial.**
**Mon., Aug. 7th—West S. Wales Centre A.C.U. Open Speed Trials at Pendine.**
**Sat., Aug. 12th—North Wales Centre A.C.U. Open Reliability Trial.**
**Sat., Aug. 12th—Motor Cycle Races in Phœnix Park, Dublin.**
**Mon., Aug. 21st, to Sat., Aug. 26th—A.C.U. Six Days Trials.**
**Sat., Sept. 16th—The Scott Trial.**
**Sat., Sept. 23rd—500 Mile Race at Brooklands.**

### THE RIGHT TO CARRY A CREST.

Please inform me if it is legal to have a monogram on a sidecar. I have been informed that there is a tax of £10 per year for a monogram on any vehicle.—A.D.

You may have a monogram, or device, on a vehicle, provided it is not a crest or coat of arms. The right to use a crest or coat of arms costs one guinea per annum, or two guineas per annum if carried on a vehicle.

### A CARBURETTER HINT.

Since having a new cylinder fitted to my engine I find that it starts at first kick with the air full open and a quarter throttle, after which it answers well to the throttle up to about three-quarters of the way, when it "chokes" and pulls up. An extra air is fitted to the induction pipe, but does not improve matters at all. The carburetter is in good order, and has a jet marked 32.—W.G.

Probably you will find you have to close the air when you open the throttle fully. This is not unusual with some carburetters.

### CHANGES TO A TWO-STROKE TWIN.

I have recently purchased a second-hand Scott, which I find hard to start from the cold. (1) Would putting an extra plug to each cylinder improve it? (2) How would this affect petrol consumption and general efficiency? (3) What percentage of oil to petrol is generally used in the petroil system? (4) Should the ordinary oiling system be used at the same time?—P.O.

(1) The fitting of an extra plug would not affect matters so far as starting is concerned. (2) A plug in the cylinder head might improve general efficiency to a slight extent. (3) The proportion is half a pint of oil to one gallon of petrol. (4) If this is used the ordinary system of lubrication need only be employed occasionally to oil the crankshaft bearings.

### HUB GEAR TROUBLE.

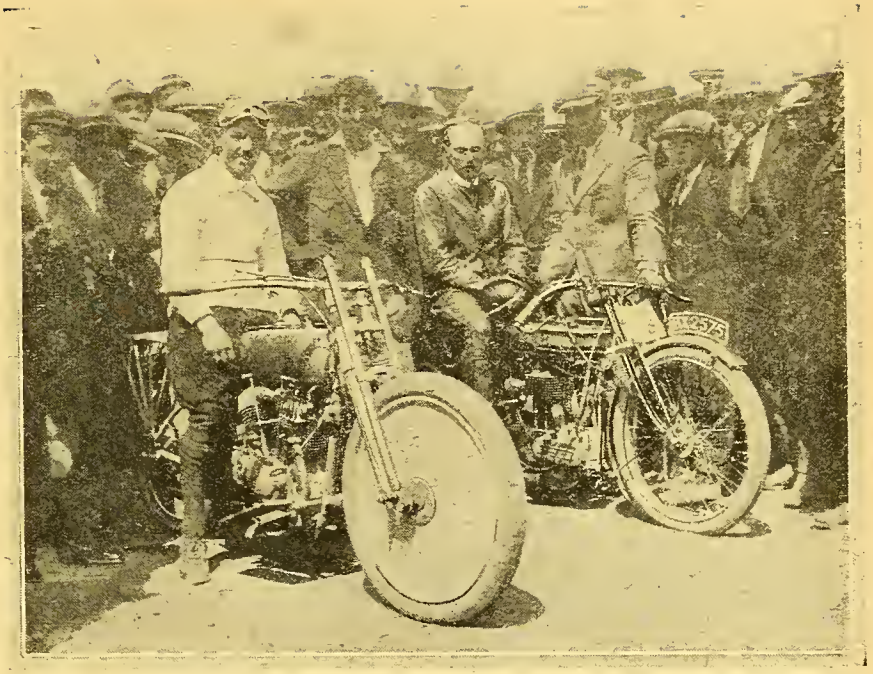
I have a difficulty with the Armstrong three-speed hub gear of my old Premier motor cycle. The low gear does not act—nothing appears to be broken, the top and middle work all right, but when the lever is moved into the low no change takes place. The rod does not jam in the hollow spindle—L.H.

You do not mention the type of Armstrong gear. The push rod should project from the end of the axle $\frac{5}{16}$ in., so as to be sure of engaging all gears properly. If the gear is mark VI or VII, the trouble may be due to the sliding sleeve being worn, with the result that it will not push the small pinion in far enough to engage with the right clutch. If the gear is mark II, III or V, the difficulty may be caused by too weak an axle spring.

### MISFIRING AFTER STARTING.

Each time I start my ex-W.D. single cylinder machine from cold it will not fire regularly, and does not take any air for about half a mile. After that distance it takes full air and works splendidly; but should the engine get cold again the trouble reappears for the first half-mile. The carburetter is quite clean, petrol pipe clear, and everything as clean as possible. My magneto has been in use for four years without a hitch, and, to all appearances, is in order. Can this have anything to do with it?—A.L.K.

The trouble with your engine is most probably due to the fact that the inlet valve is worn in its guide, thus rendering starting difficult; also notice if there is clearance between the tappets and valves when the engine is cold. Since the engine runs perfectly when warm, it seems unlikely that there is any defect in the magneto.



At the conclusion of the 50 mile Welsh Speed Championship Race on Pendine Sands, F. Bush (998 c.c. Harley-Davidson) and Dr. Lindsay (490 c.c. Norton), respectively first and second men home, surrounded by an interested crowd of spectators.

### SPARK INTENSIFIER ON THE TANK.

As I am desirous of fixing a spark intensifier on to the tank of my two-stroke I propose fixing a long h.t. wire from the magneto to one end of the spark intensifier and a second wire from the other end to the plug. Owing to the great speed at which the current flows from the magneto I assume the extra distance that the current will have to travel before it reaches the plug will in no way affect the timing.—P.L.P.

Your method of fixing the spark intensifier is quite in order, and the length of high tension wire will make no difference. Of course it would not be advisable to fit an open spark gap on the tank anywhere in the vicinity of the petrol filler, as by so doing you would run a grave risk of igniting the fuel should there be any overflow after filling. A gap which is enclosed or protected by gauze would be quite safe.

Considered to be the most dangerous corner on the T.T. course. Half-way down a long descent, the bend at Craig-ny-baa can be negotiated "all out" by a skilled rider. W. Brandish (499 c.c. Triumph) hugging the inside edge.

### CONDENSER NOT FUNCTIONING.

I have had a second-hand magneto recently fitted to my lightweight four-stroke. It functioned perfectly for about forty miles, when the engine commenced to misfire badly, finally stopping altogether. Examination of the contact breaker revealed that the platinum points were fused, and pitted with deep holes. After filing the points flat the engine fired perfectly for a further forty miles. I have since experienced this trouble four times, at intervals of forty miles, and at the expense of two sets of new platinum screws. What is the cause of this periodical fusing of platinum tips, and the remedy?—H.O.J.

We should say that the condenser connections are at fault. A small spark may take place between the platinum points, but if excessive sparking occurs the condenser or its connections are usually the cause of the trouble.

While everyone inclines to the belief that riding in the T.T. is a "young man's game," such veterans as G. E. Cowley, here shown on his Sunbeam in the Senior Race, and F. W. Applebee, who rode a Levis in the Lightweight event, prove that they are not too old for racing even when nearing 60 years.

## EXPERIENCES WANTED.

*Readers' replies to questions published under this heading should be addressed c/o "The Editor," "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, when they will be forwarded direct to the querists concerned.*

"J.C." (Ayrshire).—Suitable jets for Cedos 2-stroke.

"R.G.P." (Cork).—Degory carburetter fitted to Sun-Vitesse 2-stroke.

"V.O.G." (Ipswich). — Automatic valved 4-cylinder F.N.

"E.P.S." (London).—Indian chief with sidecar.

"G.A.E." (Leeds).—Powerplus Indian.

"E.K." (Surrey).—Auto-wheels.

J.V.C.S. (Oundle).—ABC.

J.B.J. (Fence Houses). — Weatherell Automatic Lubricator on 550 c.c. Triumph.

E.J.T. (Wadhurst). — Seal Sociable: durability, road holding qualities, and climbing.

A.H. (Leicester).—4 h.p. Corona. solo.

Puzzled (Kimberley, S.A.).—Consumption of 350 c.c. Douglas with standard Amac and other carburetters; also any improvement tips.

## RECOMMENDED ROUTE.

ILFRACOMBE TO MELTON MOWBRAY.—W.H.T.

Ilfracombe, Braunton, Barnstaple, Swimbridge, South Molton, Stuckeridge Bridge, The Exeter Inn, Bampton, Shillingford, Venn Cross Station, Wiveliscombe, Milverton, Norton Fitzwarren, Taunton, Bathpool, Durston, Lyng, Othery, Piper's Inn, Street, Glastonbury, Wells, Priddy, Cheddar, Westbury, Wells, Ston Easton, Farrington Gurney, Hallatrow, High Littleton, Farmborough, Marksbury, Corston, Bath, Swainswick, Nailsworth, Stroud, Painswick, Shurdington, Cheltenham, Presthury, Winchcomb, Broadway, Willersey, Weston-sub-Edge, Mickleton, Stratford-on-Avon, Warwick, Melton Mowbray. Approximately 262½ miles.

### Found on the Road.

Found at Hendon Aerodrome, after North London Rally on Whit-Monday, a lady's umbrella and a gauntlet glove. Apply to Mr. A. W. Day, "Claremont," Ballards Lane, Finchley, N.3, organiser of the rally.

Mr. E. A. Freakley, 101, Blackheath Hill, Greenwich, S.E.10, reports a case of luggage found between Redbourne and Markyate, on the London-Holyhead road, on Saturday, June 3rd.

### Some Recent Improvements.

Some considerable improvement has been effected in the appearance of the 5 h.p. single cylinder and 8 h.p. 4 cylinder F.N. by the adoption of a blue taper panel in the tank and on the toolbox. Forks similar in design to those on the 8 h.p., with ball bearing links, are now fitted to the 5 h.p. model.

### Additions to the Editor's Bookshelf.

"Wireless at Home." (Percival Marshall & Co. Price 6d.)

"The Great North Road."—London to York. By Charles G. Harper. (Cecil Palmer, 7s. 6d.)

"The Great North Road."—York to Edinburgh. By Charles G. Harper. (Cecil Palmer, 7s. 6d.)

### To Avoid Possible Misunderstanding.

In our London-Edinburgh report a certain rider was mentioned as being in trouble with his "change speed quadrant." Unfortunately, the word "quadrant" was printed with a capital Q, which might have led some readers to associate the failure with the machine of that name. As a matter of fact both the Quadrant machines in the run qualified for gold medals.

### Price Correction.

The price of the 595 c.c. Douglas sidecar outfit is now £135.

### Oilcans for the Admiralty.

An Admiralty order for 1,728 of their seamless serrated oilcans has been received by Joseph Kaye and Sons, Ltd., Lock Works, Leeds.

### Change of Address.

Staffed by experienced engineers and carrying a large stock of bearings, the new London office of the Hoffmann Manufacturing Co., Ltd., is now at 2, Bedford Square, London, W.C.1.

### Lubricants Now Cheaper.

From the beginning of this month all motor lubricants sold by Prices' Co., Ltd., Battersea, London, S.W.11, have been reduced in price, a new list having been published giving full particulars.

### More Price Reductions.

Considerable reductions have been made in the prices of specialities sold by Saxessories, George Street Works, Coventry. Their pillion seat is now 25s., and their air spring pillion 17s. 6d.

### Carburation on the T.T. Machines.

It speaks well for the manufacturers of the Amac Carburetter that in the Senior Race all the finishing machines were fitted with Amacs, except three. In the Junior Race 15 out of the 16 finishers were Amac equipped, and in the Lightweight Race these carburetters were used by all the competitors except four—a record of which the firm have good reason to be proud.

### Puncture Sealing Compounds.

Among the successful puncture sealing compounds may be mentioned Jackson's Impervo. This preparation was injected into the tubes of the machines finishing first, second and third in the Junior T.T. Race, and we are given to understand that a nail was pulled from one of Sheard's tyres at the conclusion of the race. The address of the makers of Jackson's Impervo is 48, Dover Street, London, W.1.

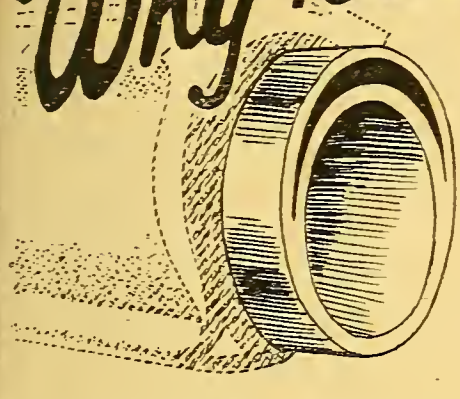
### Oil in the I.O.M.

One of the greatest contributing causes to the efficiency which has been demonstrated by the results of the T.T. Races is the high pitch of excellence reached in the accessories. It is worthy of note, for example, that Wakefield Castrol was the lubricant used by the winners of both the Junior and Senior Races this year. This makes the third time in succession that Castrol has been used by the winner of the Junior Race and the seventh time in the Senior.

### Hutchinson Successes in the T.T. Races.

An excellent series of successes in the T.T. Races must be credited to Hutchinson tyres. Seven out of the first twelve lightweight machines, including the first, second, and third, eight out of the first twelve Junior machines, including the first, second, and fourth, seven out of the first twelve Senior machines, and 90 per cent. of the gold medals won in all races were gained by riders using Hutchinson's.

# Why tolerate Punctures?



*The Remedy is Simple and Prices are Reasonable.*

The perfect **Puncture-Sealing** Tube discovered at last. **Challenger Patent Puncture-Sealing Tubes** are practically indistinguishable from the ordinary old-fashioned tube. They are absolutely pneumatic throughout and contain no messy or sticky substances, nor is there any solid filling, nor anything which will collect in a lump in the tyre while the car is standing. The only difference from an ordinary tube is that the tread portion is very slightly thicker and is built of three layers so adjusted as to be self-sealing: the centre layer being composed of the patent hole-proof composition, which instantly closes up when the nail or article causing the puncture is withdrawn.

Sole London and District Agents for A.J.S., Excelsior & Dunelt Motorcycles

## Are you willing to be advised?

**If so, then just send us the following brief particulars of your motorcycling requirements and we will give you our expert advice—FREE.**

1. **Type of engine preferred :** Single, Twin, Two-stroke, Four-stroke, etc.

2. **Solo or Sidecar combination.** Is machine required for solo riding only, for dual purposes, or as a combination only?

3. **Maximum price you are prepared to pay,** also what is amount you would prefer not to exceed?

4. **Speed.** Is great speed required, or will a go-anywhere mount capable of putting up a good average speed answer your purpose?

5. **Method of payment.** Do you wish to pay cash or would an Extended Payment arrangement suit you better?

6. **Exchange.** Have you at present a motorcycle which you would require us to take in part payment for a new one? If so, please give full particulars.

We feel there are great numbers of potential purchasers ready to buy, but undecided as to what make would suit them best and where, in their best interests, they should get it. As Agents for ALL first-class machines we can give unbiassed advice, and owing to our large contracts we can offer one of the best selections in the country.

**Send for Bargain List of shop-soiled and carefully used machines—it will pay you.**

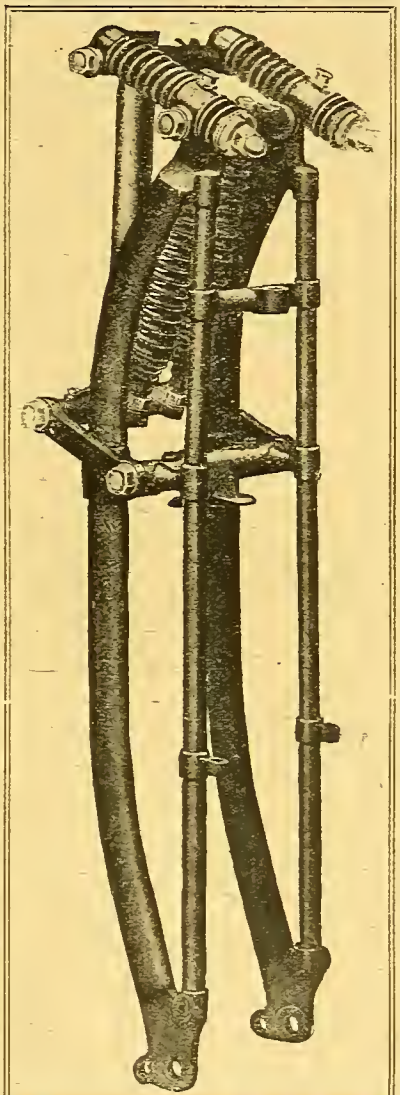
The

# BRAMPTON

## BI-FLEX SPRING FORK.



## A Telling Testimonial.

*The following is a copy of unsolicited letter received from a user of the Brampton Bi-Flex Spring Fork, resident in Oxford, dated May 27th, 1922.*

Dear Sirs.

The Spring Forks I ordered from you arrived safely and in good order on Tuesday. Yesterday and to-day I have been testing them on some of the roughest roads round here and they are a fairly good test. Naturally my expectations were high, but I am glad to say they were exceeded by the efficiency of your Fork. The comfort of the machine has been trebled and it steers itself almost without assistance.

Yours sincerely.

**Illustrated and descriptive booklet free on request.**

**BRAMPTON BROS. Ltd.**
**Oliver Street, BIRMINGHAM.**

# OPEN LETTER TO RIDEEZI SALES, LIMITED.

DEAR SIRS,

Without placing me under any obligation whatsoever, kindly quote me for 1922 Model together with Lamp Horn Licence Holder, and the various other Accessories which I have placed on the back of this letter. I shall require to be fully insured for 12 months and also require you to pay the tax, therefore, kindly show me exactly the amount of deposit which you would require on this transaction, and the monthly payments which I should have to pay for 18 months. It must be distinctly understood that when I pay the first deposit that I am not called upon to pay one penny more other than the usual monthly instalment.

Yours faithfully,

P.S.—I understand that your new Scheme allows the hirer to pay off the instalments in a shorter period than 18 months and to obtain a rebate, so that the machine shall not have cost him one penny more than if he had originally agreed to complete the payment in the time taken.

## Saturday's Club Championship Event.

TWENTY-SEVEN clubs will meet in friendly rivalry next Saturday to contest the club championship of 1922. Representative teams have been nominated by all the leading motor cycle clubs, and a course in Hertfordshire abounding in hills has been again selected, with Tring as the rallying point.

Contests such as the Team Trial for *The Motor Cycle* Challenge Cup do an untold amount of good for the pastime, for the majority of the entrants are keen amateur owners of the machines they ride, and enter upon the trial with the utmost enthusiasm for the benefit of the clubs which they represent.

We have no doubt that, with the efficient organisation for which the Motor Cycling Club has become famous, an entirely successful and enjoyable event will result. Although few will be concerned by the announcement, it may be of interest to record that the Auto Cycle Union at first unaccountably withheld a permit for this event, though, without having disturbed the M.C.C. arrangements in any way, the original decision was rescinded and a permit issued as late as last Thursday.

What good and useful purpose has been served by attempted interference with an annual event of recognised importance the A.C.U. best know, particularly as the M.C.C. Team Trial has for years past attracted a representative entry (it is always the largest and most representative inter-club gathering of the year) and the date of this year's event was announced months ago. The A.C.U. is running a risk of getting into disfavour by the arbitrary actions of some of its busybodies whose actions tend to nullify the undoubted good work carried out by the governing organisation.

## Cylinder Capacities.

NOW that the A.C.U. is recommending the classification of motor cycles on the basis of 1 h.p. per 100 c.c., it will behove riders, and even certain manufacturers, to obtain some definite knowledge of the cylinder capacity of the machines in which they are interested.

Not long ago we had occasion to point out how misleading were existing horse-power rating engines, varying by as much as 130 c.c. in the case of units of the same nominal horse-power. It was these discrepancies and the attention which they received that resulted in the new ratings being considered and recommended by a specially appointed committee.

Examination of the programme of most of the prominent open reliability and speed trials shows that there is quite an appreciable lack of knowledge of cylinder capacities amongst the entrants of machines, and this failing is not confined solely to private owners, who might be forgiven a lack of knowledge of the exact internal dimensions of their engines.

In one important event recently a number of machines of one make embodying a well-known proprietary engine were credited with three different capacities, while another maker using the same engine stated its capacity at a figure slightly higher than any of the other figures quoted by the other entrants.

Another proprietary engine is frequently entered in trials, by makers and riders who use it, with statements of capacity which vary by as much as 20 c.c.

Of course, these things do not matter greatly as they do not bring the machines concerned into another class, but for the good name of the engineering section of the motor cycle industry trade entrants in trials should at least specify their cylinder capacities with accuracy.

An index to the advertisements in this issue will be found on the page facing the back cover.

## Those Were Stirring Times.

I HAVE been swopping yarns this week with an eminent member of the trade, whose memory goes back about as far as my own. We got to the point where, after tremulous solo adventures, we dared to invite the one and only fair to accompany us. He hired a push-bike trailer for a run from town to the sea. The coast was reached well enow, as the poets put it. But the return journey was arduous. The automatic inlet valve took a dislike to its cotter, and spat it out into the road. At that date there were no such things as garages, and it is doubtful whether a spare cotter existed in the British Isles; moreover, even the blacksmiths had downed tools for the day. So he borrowed a hairpin from his passenger. It lasted two miles. He borrowed another. And so on. The demure Victorian maiden who started out with him was transformed into rather a saucy, stagey flapper before the trip ended. Later on the accumulator gave out. Also the spare accumulator. Such trifles did not worry us in 1903. He woke up an electrician, bought some dry cells, caused his passenger to nurse them on her lap, and connected them up from her lap to the coil under the bicycle tank with some six yards of bell-wire. In fact, he felt rather more comfortable on this improvised ignition; for the trailer connection was a thought dickey, and so long as the engine went on firing he knew the trailer—and its contents—were still there.

## Forget About Your Oil.

I HAVE recently fitted a Best and Lloyd mechanical oil pump, and have finished for ever with the adjustment of drips, the watching of miles on my speedometer, the anxious ear cocked at the sound of the engine. I just see that there is plenty of oil in the tank, and then—well, I just ride. When the toy was new I found a certain fascination in watching a fat little splodge of Summer *Huile de luxe* eject itself every few seconds from the downturned pipe, and slide across the tiny tilted basin to the hole leading to my engine. But now I know that the splodge never fails to appear when due, I forget all about such mundane matters as lubrication, and let my thoughts wander to the scenery or the bobbies or the latest *her*. The engine appears to prefer this regular ration to the boa-constrictor régime of alternate gorges and fasts dictated by a hand pump; and my oil bill looks like being appreciably smaller, for since I know what I am doing, I no longer over-lubricate. Of course, the critical mind of the professional journalist is never *quite* satisfied. These "stick on" pumps must necessarily be mounted in somewhat exposed positions, and I suppose that some day I shall neatly wipe the pump clean off the engine when I am cutting a kerbed corner too fine. So in theory I should prefer a pump designed as part of the engine, and tucked out of harm's way. Secondly—though here I meekly bow my ignorant head to the Best and Lloyd trained metallurgist—I wonder why the pump designer is so fond of nickel plating. I had already quite enough to keep clean, and it reflects the sun into my eyes. I suppose he will retort that motor cyclists in general prefer something bright. So do magpies. You can't knock sense into a magpie's head. I know.

## Round *v.* Square Tanks.

I USE both adjectives in a Pickwickian sense, no motor cycle tank being truly round or square. This is merely a mild enquiry as to whether other riders find that the rain is far more apt to run round to the underside of a more or less circular tank than with a tank of roughly rectangular contours.

## "Mixed" Meetings at Brooklands.

NO, I don't mean what you mean; I am querying the wisdom of mixing motor cycle races with car races. Colonel Lindsay Lloyd holds that if you have a nice pair of prismatic lenses, and take a stance on the club-house or the member's hill, you can follow a motor cycle race quite as nicely as you could from the fork. Some lucky people are blessed with the perfect vision immortalised by Sam Weller as "double extry million horse-power magnifying." Others have the kind of glass that is marked "12x," whatever that may mean. I have just ordinary eyes, and my glass is only marked "8x." I *won't* go to the fork, or anywhere else on the edge of the track, when interesting cars and interesting people can only be viewed close up in the paddock. So on these occasions I know no more about the vicissitudes of a motor cycle race than I know what Queen Elizabeth would have done with Lloyd George if he had risen to eminence in her reign. And I like to know what's what in these events. So I prefer my motor races like my drinks—one sort at a sitting, please. Not but what the Royal meeting was very good fun. *Did* you see Chitty-Bang-Bang misfire into that pusher's eye?

*Ixion's "MOTOR CYCLE REMINISCENCES" are available in book form, price 2s. 9d. post free, from "The Motor Cycle" Offices, Dorset House, Tudor Street, E.C.4.*

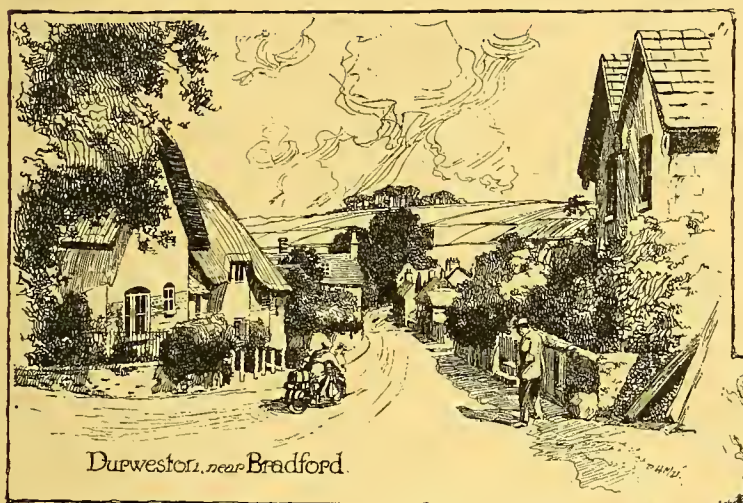
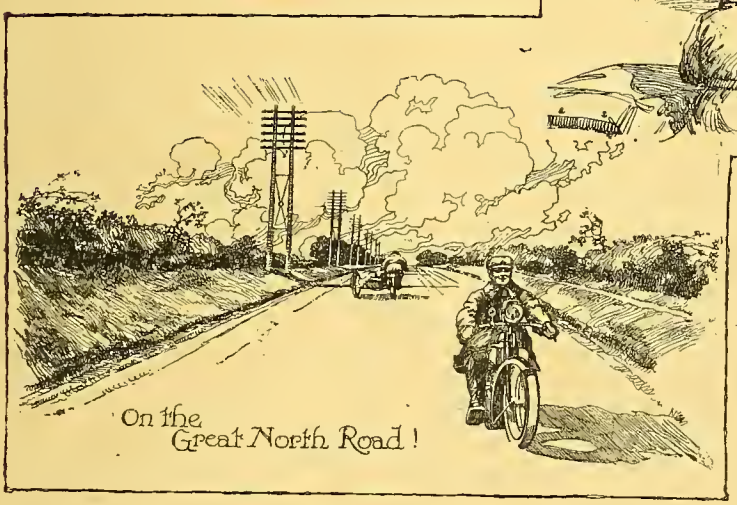
## More Trouble.

ON May 18th I described how a medical reader bought a 3½ h.p. Ponk-Ponk, which was quite satisfactory, barring its rear brakes. The makers got into difficulties, and Road Destroyers, Ltd., took over. Our reader sent them his back wheel at Christmas, and they kept it—to his infinite chagrin—until this month. At last it returned, and he had some great spins. One day he was descending a rough 1 in 7 lane, which abutted at right angles into a *very* main road. The brakes failed. He crossed the main road at "60" or so, much assisted by a temporary vacuum in the traffic. Is he thirsting for the blood of Road Destroyers, Ltd.? No. He is kicking himself because he did not think of stopping the runaway jigger by caressing the outside flywheel with his boot-sole. Which reminds me of Tommy taking the Hun's frightfulness as a matter of course, but complaining bitterly of plum and apple jam. At present the 3½ h.p. Ponk-Ponk is in the hands of a capable local mechanic, who is eliminating from the brakework the tiny keys, feathers and threads beloved of Road Destroyers, Ltd., and substituting *large* squared portions, with visloks, castellated nuts, split pins, spring washers, seccotine and other holdmefasts.

## Asking for It.

SOME weeks ago I rashly announced that this year I was going to enjoy a non-stop season on the road, and explained how the trick was to be done. One never gets in a mess without discovering that old daddy Adam went through it æons ago in the Garden of Eden. At any rate, a lot of small sagacities which seem to date back to him crop up in your mind immediately afterwards. F'rinstance—"Don't halloa till you're out of the wood!" "The best laid schemes of mice and men," etc., etc. Am I having a non-stop season? Of course not. I'm not having common troubles. But I get regular packets of weird misfortunes which never happened to anybody else, or to me previously. For example, I was riding along a beautiful street when a horrible jangle occurred in my transmission, and an enormous piece of copper wire—as thick as telegraph wire—was trying to lash my rear hub and chain to the frame. A day or two later the rear stand of my machine wilted as a protest against the weight of the jigger. When things were going too well with the Roman emperors of old, they used to dump the crown jewels in a quicksand, or take other radical measures to prevent the gods from feeling jealous of them. I am considering some step of the kind—perhaps I might fill up my dynamo bearings with carborundum—there's a chance that Jupiter doesn't know how late lighting-up time is under the Daylight Saving Bill.





ENGLAND'S HIGHWAYS.

The motor cyclist who carries a camera on his jaunts certainly adds to his pleasures by obtaining records of his journeyings, but possibly the artist's pleasures are even greater, for the slightest of sketches carry more meaning—to the artist—than the best of photographs.

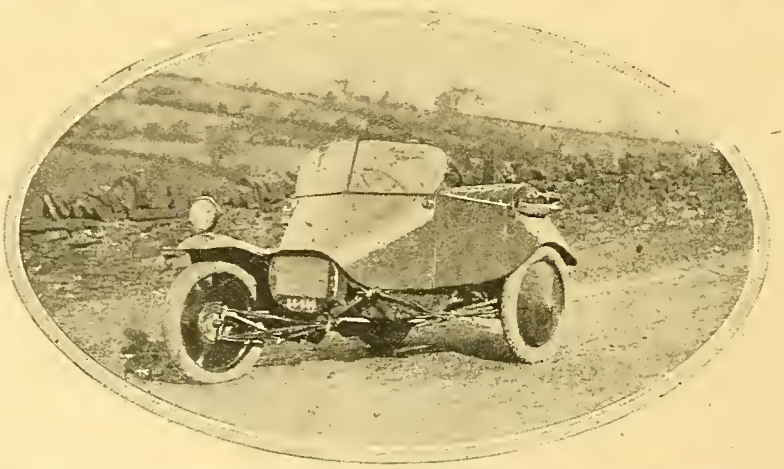
## Practical Notes on the Scott Sociable.

By H. MORTIMER BATTEN.

THE ignorant jeer, the foolish grin, the conventional are coldly superior, but the truly intelligent are always interested. That is the summing up of one's fellowmen from behind the wheel of a Scott Sociable.

Jeers become less prevalent, however, as the sight of the little machine becomes more familiar, but that idiotic grin of the fellow who thinks you are trying to be funny just because you drive a machine out of the ordinary comes in time to irritate.

The sidecar unquestionably has advantages over the light car, but its disadvantages are enormous. If one can rule out these disadvantages while retaining its unique and favourable points—that is, if one can obtain car comfort and shelter in a machine which has the mobility and economy of the sidecar, one has obviously realised something very much worth while. This was Mr. Scott's aim in evolving the three-wheeled Sociable, and certainly he has succeeded. The Scott Sociable is as sporting as a well-powered sidecar outfit to drive; owing to its wonderfully lively engine, smooth torque, and light weight, its acceleration and nippiness are astounding. As to comfort and weatherproofness, more anon.



The Scott Sociable—distinctive in design and possessing certain advantages over both car and sidecar. The engine, 76·2 × 63·5 = 578 c.c., is a water-cooled twin.

### Handsome is as Handsome Does.

The appearances of this machine offend the man driving it least of all, and so he becomes rather tired of those who wave aside favourable points as overwhelmed by the so-called ugliness of the Sociable. I have had a good many of these gentry as passengers from time to time, and invariably they prove the easiest converts. At the end of the ride you are more than likely to hear the man who only an hour or so previously was condemning the Scott Sociable on the grounds of its appearances, arguing in perspiring wrath with anyone who dares to call the machine ugly.

Personally I have ceased to regard the Scott Sociable as ugly, but even if it were I hold that its ugliness would be entirely permissible on the grounds of its distinctly practical design—I selected it because I saw it was the work of a genuine engineer.

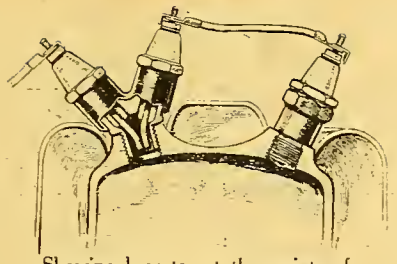
### Tyre Wear.

After 6,000 miles driving, 3,000 of which was under most strenuous trials conditions, I found it necessary to renew the driving wheel tyre. It was not worn out, but it was too smooth to obtain a good grip. The other three tyres (including spare wheel) are still perfectly sound, after close upon 9,000 miles, though quite smooth.

**8,000 Miles on a Sidecar Substitute.—**

My machine was one of the first to leave the factory, and during the first two months of my ownership it developed one or two weaknesses. These were amended as they occurred, and during the last 6,000 miles the machine has been in daily use over moorland roads and under generally trying conditions, practically without attention of any kind. It has not even been decarbonised.

It will be seen from the foregoing that rather remarkable results have been obtained as regards tyre economy, and the makers themselves do not claim such good results. On the whole, my Scott Sociable, providing car comfort for two and even three passengers, has actually cost less to run than various 3½ h.p. sidecar outfits I have owned.



Showing how to set the points of the two-pole plug so that the gap will not be immediately widened by burning.

### Petrol Consumption.

Petrol consumption on the Scott Sociable seems to vary more than on most machines, which is doubtless due to its lightness. Normally one runs the engine as one runs a car engine—that is, at a much wider throttle opening than one runs a motor cycle engine. Road surface and wind affect petrol consumption enormously. On a smooth surface with a following wind, I have regularly obtained 90 m.p.g. and put up a good average speed. Under normal conditions of main road travel, petrol consumption hovers on and about the 80 m.p.g. mark. With a strong headwind and heavy roads in a mountainous district I have had my fuel consumption up as high as 30 m.p.g. Oil consumption is negligible. The Scott Sociable uses exactly a quarter of the oil of a baby two-stroke I have had in my possession at the same time.

### Eliminating Weakness.

There is hardly a moorland track in Yorkshire or Cumberland that Mr. Scott and his satellites have not travelled during their road tests of this machine. This process naturally revealed various weaknesses in Mr. Scott's original design, and one by one minor points were altered and strengthened, till the Scott Sociable reached the stage whereby it was considered safe to place it in the hands of the public.

A stud of factory machines under test is, however, an entirely different proposition from a number of machines in the hands of the public, and it must be admitted that the first machines turned out gave a certain amount of trouble. The public will find weaknesses that the factory tester never finds. The tester at once perceives any minor defect, and sets it right. With the ordinary owner, however, it is a case of minor defect upon minor defect, till the aggregate results in the development of some serious weakness and the machine breaks down. Thus, there is only one tester to decide whether a new machine is or is not a worthy road proposition, and that tester is the public for whom the machine is made.

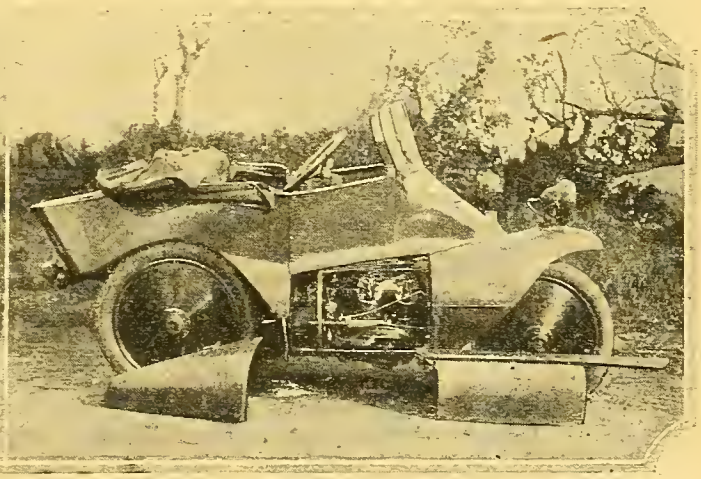
The outstanding weaknesses in the first Scott Sociables that were turned out were in the transmission, but, having carefully followed the various revisions in the design that have been made, and this backed by my own experience, I feel confident that transmission weaknesses have now been overcome.

My own experiences were as follows: My first mishap, which occurred during the initial 1,000 miles, took the form of a stripped key, which conveys the load direct from the clutch to the driving pinion. This meant removing the engine from the frame and taking the whole unit adrift, which I did myself, fitting a new key, which is still doing service. In the new design this key is an integral part of the driven member, so that the likelihood of breakdown of the kind I experienced no longer exists.

While on this repair I found that my universal joint was wearing badly, and I sent it back to the makers. They supplied me with a much stronger pattern of a kind they had just started to fit, and have fitted ever since. This shows no signs of wear as yet.

My second breakdown was caused by the small bevel

The wheels are easily detached, the simple stand being much more quickly operated than a jack.



The removal of the cover gives access to the engine and gear box, an operation of a few seconds only.

**8,000 Miles on a Sidecar Substitute.—**

in the final drive choosing to shed its teeth. A new one was fitted, and has proved satisfactory, but the makers are now employing a new type of spiral bevel, which is not only infinitely stronger than the old one, but is also quite silent. The old straight bevel was very noisy.

It will be seen, then, that the three outstanding weaknesses in the transmission of the very early machines have been set right, and, so far as one can judge, the transmission of the present-day Scott Sociable is as infallible as that of the best car.

### Frame Repairing Possibilities.

The frame tubes now used in the Scott Sociable are very much stronger than those originally fitted. The old-type tube was apt to fracture at the ends, but in the present type the ends are reinforced and practically unbreakable. One tube in my front bracket used to fracture regularly every three weeks. The breakage did not matter much, it was simply that the tube cracked and went on doing its work in that condition. I then fitted one of the new type tubes, which has had 4,000 miles and is still as sound as a bell.

As an example of the convenience of the nut-and-bolt method of frame construction, as distinct from brazed junction lugs, I had the misfortune last summer to collide with a taxicab and completely crumple up the front wheel bracket. At first it looked an awful tangle, but having taken the bracket to pieces I found that only three tubes were damaged. At the time I foolishly had no spare tubes by me, but I took the damaged portion of the frame to bits in twenty-two minutes, and wired to the works for new tubes. These came on the following day, and the damaged bracket was reassembled equal to new in thirty-three minutes working time. Any sort of frame breakage can be mended in this way at an absurdly low cost, and naturally one keeps a spare tube of each type, three in all, in case of breakage.

### The Advantages of the Machine.

The advantages of the Scott Sociable are very highly appreciated by those whose motoring in the past has been confined to the sidecar type of vehicle. Round its economy its chief advantages are centred. The point is that it offers far more for one's money than any other machine on the road. The windscreen and hood keep out the weather, and one can travel in decent clothing and keep perfectly dry during the most villainous winter gales. A spacious dash tray is at hand for buns, sandwiches, or one's tobacco pouch, while the seats are deeply and comfortably upholstered. One needs to bear in mind that all three wheels are sprung, and the entire chassis insulated from road shock. Eggs can be carried unpacked in the dash tray, so excellent is the springing, and naturally the tool boxes do not shake their contents badly. Luggage travels in the spacious dickey without fear of damage to leather suitcases and their contents. When the dickey seat is not in use there is enough room in the rear for two large suitcases, a spare cover, petrol and oil tins, spare frame members, jack, and various other oddments. Thus one can tour comfortably with all the luggage required and with all necessary accessories. The spare wheel fits under the seat, and as for minor accommodation, one is much better off than with most cars.

### Extra Passengers in Comfort.

The dickey seat is ample for a passenger up to ten stones in weight, but I do not think it was intended for a much heavier passenger, though apparently some Scott Sociable owners do not share this opinion. I have several times carried a dead weight of 2 cwt. on the back of the car, as I have been dependent upon it all winter for transportation of various kinds.

Two normal adults, a small child, and a medium-sized dog may be accommodated in the front seat.

Another point which the erstwhile motor cyclist highly appreciates is the fact that all wheels are accessible and immediately interchangeable. It is only three minutes' work to remove the spare wheel from under the seat, and to change over when a puncture occurs. Moreover, it is a clean job. Again, one enjoys the benefit of decent wheel bearings which are not exposed to mud and water, and which have no unspeakable adjustable cones. Over and above these advantages the machine fully realises "Ixion's" ideas as regards being hoseable. Two minutes' work with a bucket of water and a wet sponge after the most sloppy ride restore its original lustre.

### Speed and Safety.

As regards maximum speed, the machine will accelerate to over 40 m.p.h. on any good high road. The efficiency for the engine size is marvellous, for it must be borne in mind that the capacity is approximately the same as that of the ordinary 4 h.p. single. If one is content to keep the speedometer on at about 30 m.p.h., the petrol consumption is normally good, but if the machine is driven continuously at 37 to 40 m.p.h. speedometer reading, the petrol consumption at once drops to the tune of about 20 m.p.g. lower than before.

With regard to safety on corners it is practically impossible under any conditions to lift the side wheel. I have tried it driving solo, but, the weight of the driver being inside the wheel track, there is no tendency for the side wheel to lift. In turning to the right it would be possible to raise the driving wheel from the ground, but it would take an insane and wicked wrench to do it, and I cannot imagine any normal driver accomplishing the feat. The springing of the Sociable is, of course, excellent. Should a spring break it can be renewed in a few minutes, and one or two spares are always carried. Most of my driving has been over abnormally rough roads, and so far I have experienced but one broken spring. Coil springs are used throughout; they are light, and take up little room.

The Scott Sociable is a machine which needs very little attention. It is not a mount for the man who loves to tinker, as one can find nothing to do to it. The present two-pole plug system requires a little attention, as the plug points are apt to burn wide, whereupon they spark inside, resulting in terrific popping back through the carburetter.

# Attention to the Magneto.

## Simple Hints on the Care of the Ignition Apparatus.

So efficient and foolproof has the modern magneto become that even when the bus is down for a thorough overhaul the magneto is usually left severely alone, with the one exception, perhaps, of trimming the contacts.

At the same time, it is advisable to "get wise" to the most common troubles which might occur sooner or later and leave the rider stranded, when a knowledge of where to look for the trouble would enable a repair to be easily effected.

Owing to the fact that the magneto is revolving continuously at a high speed, mechanical defects are more frequent than electrical ones, most of them emanating from the contact breaker.

### Care of Contacts.

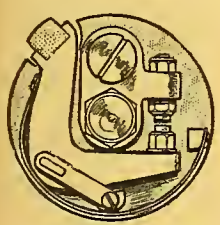
The contact breaker is located at the opposite end of the magneto to the driving spindle, and can be examined and adjusted by removing the metal or ebonite inspection cover, which is held in position by a flat spring.

The contacts should be examined for signs of overheating and pitting, and if necessary the contact surfaces filed clean with the aid of a special magneto file. This must be done carefully, as it is absolutely essential that the faces of the contacts are parallel. After the contacts have been cleaned and trued up they should be adjusted for maximum opening with the special feeler gauge supplied with the magneto.

### Causes of Misfiring.

Dirty or burnt contacts will cause the engine to miss intermittently, while contacts not opening to their full extent will have much the same effect.

Another cause of intermittent missing, especially in wet weather, is the fibre bush in the centre of the bell crank swelling with the moisture and producing a dragging effect on the contacts, sometimes causing them to stick up altogether.



The contact points should be parallel, unpitted and perfectly free from oil and dirt.

To cure this trouble the bush should be eased out very carefully with a small reamer, just sufficiently to enable the bell crank to work freely but without any side play. It will be noticed that the bell crank contact is held in position by means of a spring, and when this is lifted with the finger and moved to one side the bell crank may be removed intact.

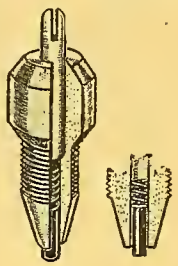
Should the retaining spring become weak in time it will allow the bell crank to lift and "chatter" at high speeds; this can be remedied by bending the spring down very slightly.

The contact breaker does not improve by being run in oil—in fact, neither oil nor grease should be allowed to get on the contact breaker or to collect on the inside of the cam-cage under any circumstances.

### Roadside Cures.

Let us now deal with a few of the troubles which may occur on the road, together with their remedies.

Should the magneto cut out examine carefully the whole of the high-tension leads and the spark plugs for signs of a short circuit; in the majority of cases the fault will be found here. If the magneto is of the type fitted with a cut-out terminal on the inspection cover, a "short" in this circuit will cause the whole trouble.



Showing how the carbon brush is held in position.

A noticeable weakness in sparking may be due to weak magnets, which, however, is unlikely if the magneto is less than eighteen months old. It will probably be traced to the contacts not opening to their correct distance, and an adjustment will usually put matters right. Old or worn high-tension leads will cause a weak spark at the plug points through electrical leakage.

Sticking contact breakers have already been dealt with, but it may be mentioned that, should a C.A.V. magneto give trouble, due to the fibre roller in the contact breaker mechanism becoming worn, this should be replaced at the first opportunity.

It is a good plan to carry a spare carbon brush obtained from the makers of the magneto. No attempt should be made to utilise a brush which has broken off short, as it is an impossibility to obtain the correct amount of pressure by stretching the spring.

If the magneto gets hot and the contact breaker and camcage show signs of burning, the trouble can almost certainly be put down to a "burnt-out" condenser. The magneto should be returned to the makers—it will work out cheaper in the end!

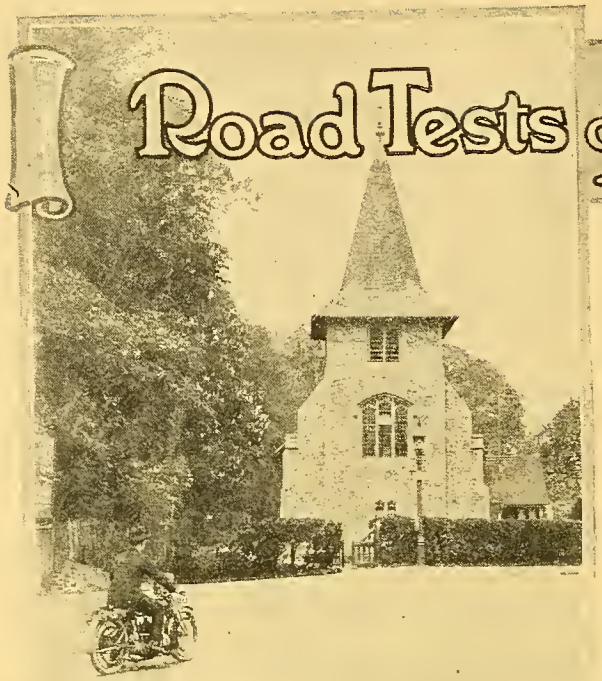
### General Remarks.

It is always a good plan, before commencing any magneto adjustments, to look over the petrol system and carburetter jets and strainer. In cold weather glance at the exhaust valve to see whether it is stuck up with oil.

With regard to the slip-ring on the armature, if this is dirty it should be wiped clean with a rag soaked in petrol, but any signs of burning should be left until the magneto is sent to the makers for overhaul.

In conclusion, the writer would like to add that, unless the magneto really does give trouble, it should be left to take care of itself.

SPARK.



# Road Tests of New Models

## The 496 c.c. V-Twin Martinsyde.

*SPECIFICATION.*

| | |
|---|---|
| *ENGINE: 70 × 80 mm. (496 c.c.) V-twin.* | *TRANSMISSION: ⅝in. chains.* |
| *VALVES: Exhaust over inlet.* | *LUBRICATION: Drip-feed.* |
| *GEAR BOX: A.J.S. Type three-speed, clutch, and kick-starter.* | *CARBURETTER: Amac.* |
| | *WEIGHT: 290 lbs.* |
| | *PRICE: £110.* |

AFTER nearly 400 fleeting miles on the 496 c.c. V-twin solo Martinsyde we are quite unable to explain the real reason of its undoubted fascination.

It may be an excellent clutch, it may be absence of vibration or transmission shock, it may be its lively and efficient engine, or again it may be only the impressive purr which answers an outward movement of the throttle lever. Perhaps—and more likely, it is all these qualities, and one or two more combined, which made a hardened devotee of the sporting single wonder if he had not been just a trifle prejudiced in his views.

### One of a Select Few.

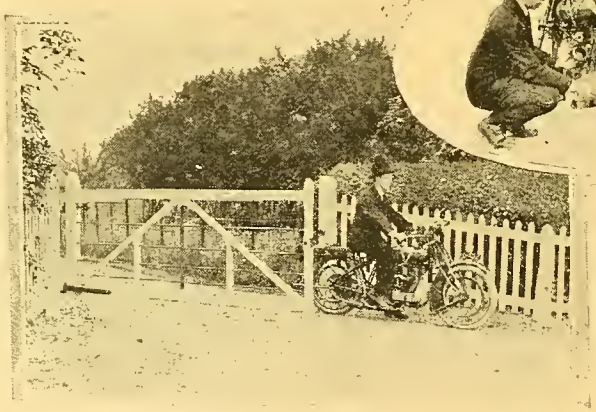
There are not half-a-dozen medium-weight V-twins on the market to-day, and one is inclined, after sampling the Martinsyde, to wonder why. A twin of any sort has certain unquestioned advantages over the single, advantages which particularly apply when the engine is of the high efficiency, hefty type. No 60 m.p.h. chain-driven "one-lunger" is pleasant to drive at lower speeds unless a very well designed transmission shock absorber forms part of its equipment.

The flat twin is usually immune from this defect, but usually, too, the difficulty of housing such a unit in a motor cycle frame makes the machine, as a whole, somewhat ungainly. With the V-twin, however, the standard "diamond" frame forms as perfect a union as bacon with eggs.

### Does Appearance Count?

Nowadays there is little to choose between the leading motor cycles and appearance therefore becomes quite an important factor. The designer of the Martinsyde has made the most of his opportunity. It is a very pretty machine indeed.

At the same time a sporting and symmetrical appearance on a solo mount does not go very far unless the riding position is right. In the machine under discussion, it is—for 90 per cent. of the people likely to buy it. From the minority there are possible two criticisms: (1) the gear control rod is inclined to get in the way of the long-legged rider; and (2) the handle-bars—perchance this is the lone voice of a faddist—are too wide and the grips too far behind the steering head for full controllability at maximum speeds.



Flexibility was a feature of the Martinsyde that was much appreciated when throttled down in free engine. (Inset) Adjusting the clutch, an operation quickly effected.

For the rest, one is comfortable at all ordinary speeds, and the control levers, including the rear brake pedal, are fully accessible without undue leg or arm movement. This somehow brings us to the brake itself, which is a pity, for we had fully intended to write a great many nice things (fully deserved) about the machine,

**Road Tests of New Models.—**

and this is another, albeit almost the last, point that we must criticise. As a brake, this member is quite efficient, indeed, as efficient as the most nervous (or hair-raising) driver could desire, but it requires more pressure by the foot to bring it into action than should be necessary, and, on our particular mount anyhow, slight eccentricities in the belt rim were felt at the pedal, very probably necessitating the weighty push complained of. Like the entirely admirable front one, of the dummy belt rim type, the rear brake, however, does its work, although, until one gets used to it, it may not seem so efficient as some.

### Freedom from Noise and Vibration.

For the rest the machine is a thoroughly delightful little solo mount. Mechanically it is very silent; indeed, the only noise of note at all is the subdued crackle, already referred to, which responds to the admission of more gas, on hills or on the level. Up to 50 m.p.h. or so there is no vibration of any sort, but thereafter to the maximum of something creditably in the neighbourhood of the elusive mile-a-minute gait there is, or was on our particular mount, a distinct trace of handle-bar tremor which, as the grips were devoid of rubbers, was inclined to give one that unpleasant sensation popularly termed "pins and needles." This, we should imagine, was very probably peculiar to the actual machine which we rode.

Very liberal openings of the drip-feed for 400 miles failed to find any sources of oil leakage—a pleasing trait which not all motor cycles of 1922 possess.

The overhead exhaust gear, exclusive to this make, is only really unusual in its absence of noise and its sturdy, simple design, the latter a quality which the power-unit, as a whole, equally possesses.

Petrol consumption figures, too, were eminently satisfactory; hard driving gave an average of 75-80 m.p.g.

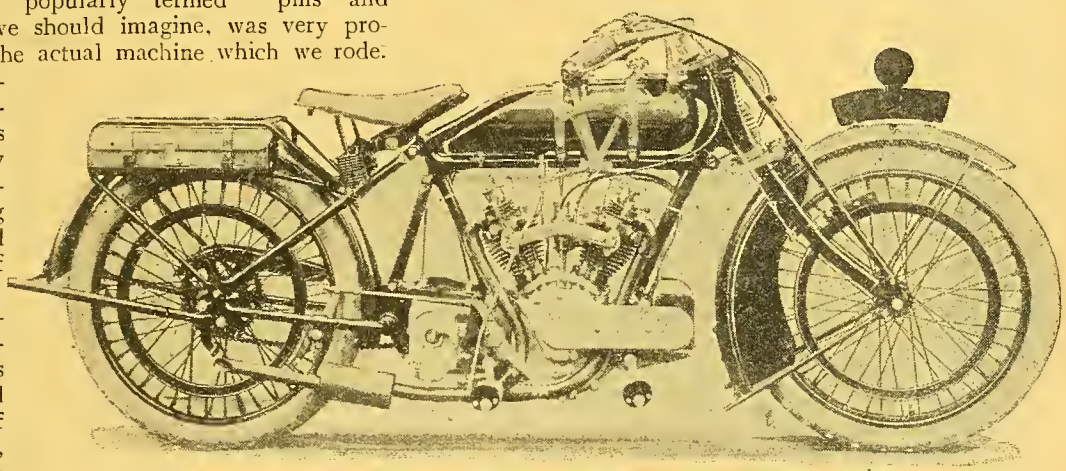
### Top Gear Hill-climbing.

It would be quite futile to say much about hill-climbing; the Martinsyde is as good a top-gear climber as any single or twin of equivalent capacity which we have sampled, and a fairly low bottom allows ample reserve for the freakiest of 1 in 3 grades; as, incidentally, recent trials have well demonstrated.

Two pairs of foot-rests are fitted. The majority of riders will find the front pair entirely superfluous except as a permanent prop-stand.

The gear box is of A.J.S. design, the most marked feature of which is the progressively smooth clutch. One soon learns that there is no need to get down to bottom to effect a start; and on the road it is seldom necessary to change down to pick up speed after traffic delays.

Summarising, we would say that the 496 c.c. Martinsyde is a very sensibly designed solo mount, combining several attractive qualities seldom found together, yet fast, silent, and reliable—we experienced no involuntary stop during our test, nor did we fear one.



A twin of pleasing appearance, particularly suitable for fast solo work, the 496 c.c. Martinsyde.

## ALTERNATIVE TAXATION SCHEMES.

THE Departmental Committee on the Taxation and Regulation of Road Vehicles is shortly to commence its enquiry, which will be confined in the first instance to an investigation of alternative methods of taxation, the question of the incidence of the tax being dealt with at a later stage. The Committee, therefore, invites suggestions, which, it should be noted, must be submitted through motoring or other organisations, and not by individuals.

Any recommended alternative to the present horse-power tax must be capable of producing a gross annual sum of approximately £10,250,000, exclusive of receipts in respect of licences for horse-drawn vehicles, fees for drivers' licences, and penalties for offences. All schemes put forward must be restricted to definite methods of taxation only, and they should show the method, or methods, in detail, so that the Committee may be in a position to judge of the probable receipts, both gross and nett, therefrom. Figures capable of substantiation must be submitted in support of any estimate of revenue.

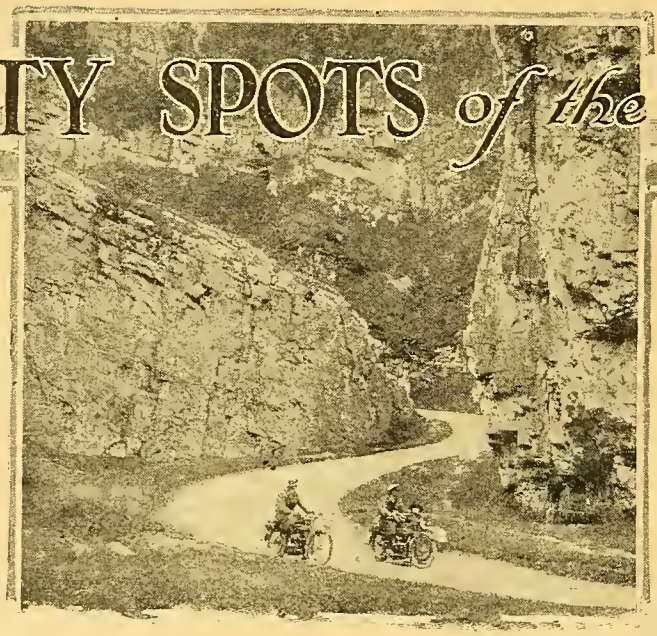
Any memorandum submitted should state the advantages which it is considered the scheme would have over the existing system, and it is pointed out that mere statements of opinion, unsupported by any concrete proposals, cannot be considered.

Suggestions — which, by the way, must be confined to mechanically-propelled vehicles—should be submitted on or before September 1st, 1922.—*The Autocar.*

# BEAUTY SPOTS of the WEST

## A Circular Tour Embracing Bristol, Cheddar, Wells, Glastonbury, and Bath.

MANY of the English counties are well noted for their beauty spots, and each has its own claim which cannot be disputed. Each tourist may have his own happy hunting ground and will tell you that this or that district is second to none for its beauty spots.



Cheddar Gorge, Somerset.

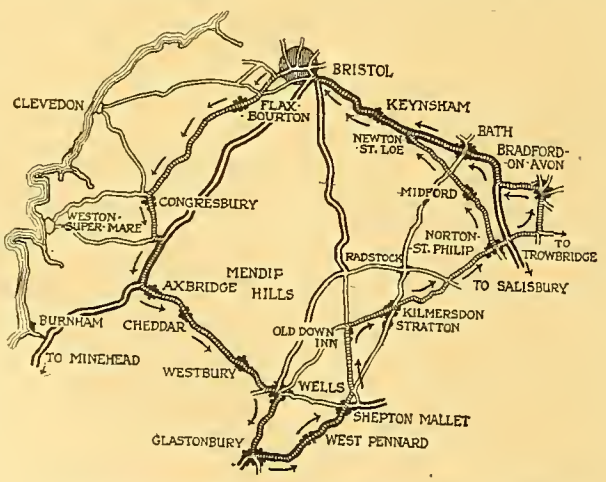
However, I think the south-western counties can well hold their own in the list. Here the motorist can enjoy hill or dale, the moors with its ever-open road, or the rough sea and rocky coast dear to the heart of the man shut up in an inland town or city all the year round. Again, he can find in abundance those beautiful old links with the past which recall the names of many men and places which have gone to make history.

There are several good centres, and in taking Bristol as one it is only a selection of many. This city itself is rich in sights, many of the lovely old churches and buildings being well worth a visit, while the famous gorge of the Avon, crossed by the well-known Clifton Suspension Bridge, has few equals in grandeur. Many day runs can be arranged from this centre. The coast can be followed to include Clevedon, Weston-super-Mare, Burnham, Minehead, etc., or tours may be taken, visiting the many old-world towns and villages of Somerset, Gloucestershire, Wilts, or Devon.

### A Run to Glastonbury.

Perhaps it will be interesting to select one such day's run out of the many possible ones, and I will take the tourist out of Bristol by the Weston-super-Mare road and continue through the pretty village of Flax Bourton to Congresbury. Here we leave the Weston road and branch to the left to the little old-fashioned town of Axbridge. We have now covered about 24 miles, and from this point we can look forward to seeing many items of interest. Leaving Axbridge, a 3 mile run brings us to the famous Cheddar Gorge, with its wonderful natural caves, through which parties are conducted at all times during the summer months, and a run up the gorge for a couple of miles will be well repaid. Cheddar also boasts some fine strawberry gardens, and here the visitor can indulge in fresh strawberries and cream to his heart's content.

Continuing our journey through Westbury, we next arrive at Wells. Here a day could easily be spent, and the lover of architecture will find much of interest in this beautiful old city. Standing at the foot of the Mendip Hills, it is truly a link with the past, possessing a fine cathedral, an ancient Bishops' Palace, surrounded by a moat, and many other features too numerous to mention. Wells occupies a prominent place in the history of England, and the inhabitants are proud of repeating many of the stirring times through which the city has passed. The interior of the cathedral is very beautiful, and contains a clock which marks the hour by two knights riding out on horseback and fighting a duel. The "Vicars Close" and the "Eye Tower" are also well worth a visit, both being near the very remarkable Cathedral.



The route taken is indicated by arrows, the darkened portions showing where the main roads were followed.

If we are going to continue our tour we must not linger too long, but strike the road leading to Glastonbury. Here a visit must be made to the ruins of the stately Abbey, with its fine Norman doorways and Abbotts' kitchen, and the "Old George" hotel in the centre of the little town would tell you many thrilling stories, could it but speak.

This will be the limit of our outward journey, and

**Beauty Spots of the West.—**

from this point we work back home *via* West Pennard to Shepton Mallet. This town, like many others in Somerset, contains a remarkable old market cross. Leaving Shepton Mallet, we strike the Bristol road for about 6 miles, until we reach the "Old Down" Inn, where we turn sharp to the right on to the Trowbridge road. This leads us to Stratton, with its fine Abbey, known as Downside Abbey, through the pretty village of Kilmersdon and on to Norton St. Philip. Here a halt should be made and a visit paid to the quaint old "George" inn. This is said to be the oldest licensed house in England, but how far this is true I am unable to say. It is a timber building, and boasts of having received the patronage of many English Kings and Queens. The landlord conducts visitors over the house, and in one of the rooms the bullet marks can still be seen where the Duke of Monmouth was fired at while looking out of an upstairs window.

**The End of the Journey.**

From Norton several ways can be taken back to Bristol. We can go *via* Bradford-on-Avon and through Bath, or we can take the road through Midford to Newton St. Loe, where we strike the main Bristol to Bath road, through Keynsham, home.

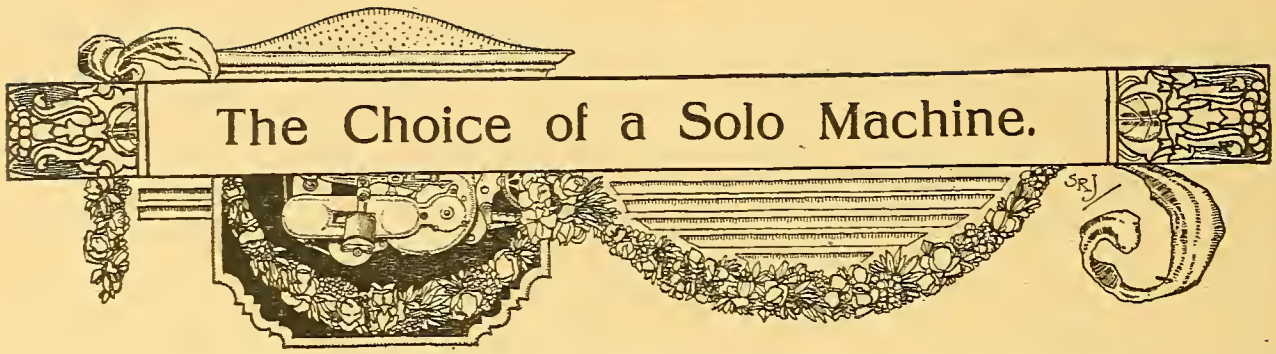
This trip, touching, as it does, a number of interesting places, is only one of many, and the views to be obtained, especially from some of the villages on the Mendips, are beautiful. Should any motor cyclists make up their minds to visit the western counties this summer, I can assure them that they will find that the scenery here compares very favourably with anything which they may consider the finest spot in England.

A fine group of old world buildings, rich in historical associations and beautiful in their picturesque setting. The Square, Wells.

## KEEP TO THE LEFT.

CONSIDERABLE discussion has been, and still is, taking place on the rule of the pavement for pedestrians, but dating from July 1st many London districts have decided on the establishment of local rules, abolishing the old "keep to the right" idea in favour of the safer and perhaps more popular one of keeping to the left. Amongst the districts conforming to this alteration are Barking, Brentford, Camberwell, Chiswick, Deptford, Hampton Wick, Holborn, Lewisham, and Poplar, but at present the new rule will not be universal by any means; the City of London has decided against it. On behalf of the change, it is urged that a large percentage of street accidents is caused by pedestrians stepping off the pavement with their backs to oncoming traffic. Recognising that uniformity of practice must be secured, the Home Office is at present in consultation with the Ministry of Transport.

# The Choice of a Solo Machine.



## Some Hints, primarily to Novices, on the Selection of a Mount.

BEFORE a comparative novice can choose his mount, he needs two distinct kinds of information. The first is technical—will a light, medium, or heavy machine suit his needs best? The second is commercial—which firms provide the best goods in that line. The former question can be answered in a few paragraphs. The second can be answered by the enquirer himself, if he will devote an evening to the job.

A lightweight machine weighs under 200 lb., is rated at from 2 to 3 h.p., and varies almost as widely in cost as any other type, according to the luxury or austerity of its specification. One of the few drawbacks to motor cycles is the physical effort of handling a dismounted machine; therefore a lightweight is a necessity for weakly people, and is desirable for any owner whose work entails short runs interspersed with innumerable stops. The present writer, an athlete and an old hand, always gives a lightweight the preference for short-distance, multi-stop riding.

### Two Warnings.

There are, however, two warnings to be added to the above. The first is that a lightweight is seldom as comfortable as a medium or heavyweight for long-distance work. If an occasional tour or lengthy cross-country journey figures in the programme, most riders would vote for not less than 3½ h.p. A light machine usually dithers more than a heavy one, and a small engine buzzes rather tiresomely when it is driven fast. The second feature is that, if you have 3½ h.p. at your disposal, you can afford to let the engine sink below par, and still have enough power to get along with; but if you have only 2 h.p. at the best, a very small derangement will cause a severe hill to become alarming. It is desirable that the owner of a lightweight should possess mechanical instincts, and look forward to taking an intelligent interest in his machine. Its mechanism is really absurdly simple, and a very few months will put him *au fait* with its possibilities, whether in the way of curing derangements or of tuning it up to run better than when it was first delivered. It is fair to add that particular care should be exercised in choosing a lightweight. Engines, gear boxes, and other components can be purchased very cheaply. Next to no capital enables any tiny garage to assemble one or two machines under some high sounding name. First-class lightweights exist, but they are accompanied by crowds of duds. Wherefore the buyer should study the advice in the second section of these notes.

The medium-powered roadster of 3½-4 h.p. is easily the most popular machine on the road, as it is powerful enough to pull a sidecar over any roads at a modest pace; it will do its solo work when it is in very poor order, as it disposes of a large reserve of power. It is not too heavy for the ordinary man to manage in runs which include numerous stops. It rides very comfortably over a long journey. It is also the most highly developed 'bus in the world, having undergone intensive cultivation from the cleverest motor cycle industry in the world for some fourteen years. Numerous first-class examples are obtainable, and depreciation on resale is comparatively low. On first acquaintance it feels rather heavy, for nearly every type weighs well over 2 cwt. But when the knack of keeping a balance in wheeling the machine is learnt, the rider ceases to be conscious that his mount is heavy. It will go absolutely anywhere without a sign of faltering, and in expense it is a sensible compromise between the two extremes. One or two of the very best 2¾-3 h.p. machines are beginning to trespass on its preserves, being a shade lighter and quite as reliable.

### Value of the Big Trials.

If the above analysis has decided any bewildered novice as to the type of machine which is likely to suit him best, the next question is that of "Which make?" There are two unmistakable tests which enable a sheer novice to read off the public form of the rival makes. The first is to procure the reports of the Scottish and English Six Days Trials for the past year or two, and to note which makes have earned plenty of gold medals, noting especially whether all—or nearly all—the entries of that make finished. The second is to consult the advertisements of second-hand machines in *The Motor Cycle*, jot down the prices asked for 1921 models of the machines which he is considering, and note which commands the highest percentage of its original cost.

There are a few items of specification which deserve brief comment. If a machine is to be used regularly after dark, electric lighting is almost a *sine qua non*. It is nowadays quite reliable, much cleaner and less troublesome than gas, but far more expensive. Some form of dynamo is desirable, as is proved by the fact that all modern cars have dynamos. The use of accumulators is not advised except where the owner has access to a really good charging plant.

The belt drive is obsolescent where medium and heavy machines are concerned, chiefly, it may be

**The Choice of a Solo Machine.—**

added, because it is hardly equal to pulling a sidecar in wet weather. On lightweight machines or purely solo machines, however, the so-called "combined" drive (chain from engine to gear box, belt from gear box to wheel) is quite sound. Direct belt drive should be eschewed except on sports models. The all-chain drive is now constructed so admirably that it is practically as smooth as any belt, and gives much less trouble.

### The Question of Comfort.

Now that roads are almost uniformly bad, the question of comfort deserves special study, but it has baffled too many of our lightweight designers. On touring machines comfort is wooed in three principal methods. Some makers adopt a fully-sprung frame. Others are content to fit 3in. tyres, which can be run at low pressures and smooth out a rough road quite incredibly. Others again fit very large and expensive saddles. The large tyres are to be warmly recommended from every point of view. They are extremely economical in wear, and very seldom puncture, besides conferring a large immunity from road shocks. A spring frame in conjunction with small tyres only attains two out of these three *desiderata*. A super-saddle can be added to large tyres or to a spring frame.

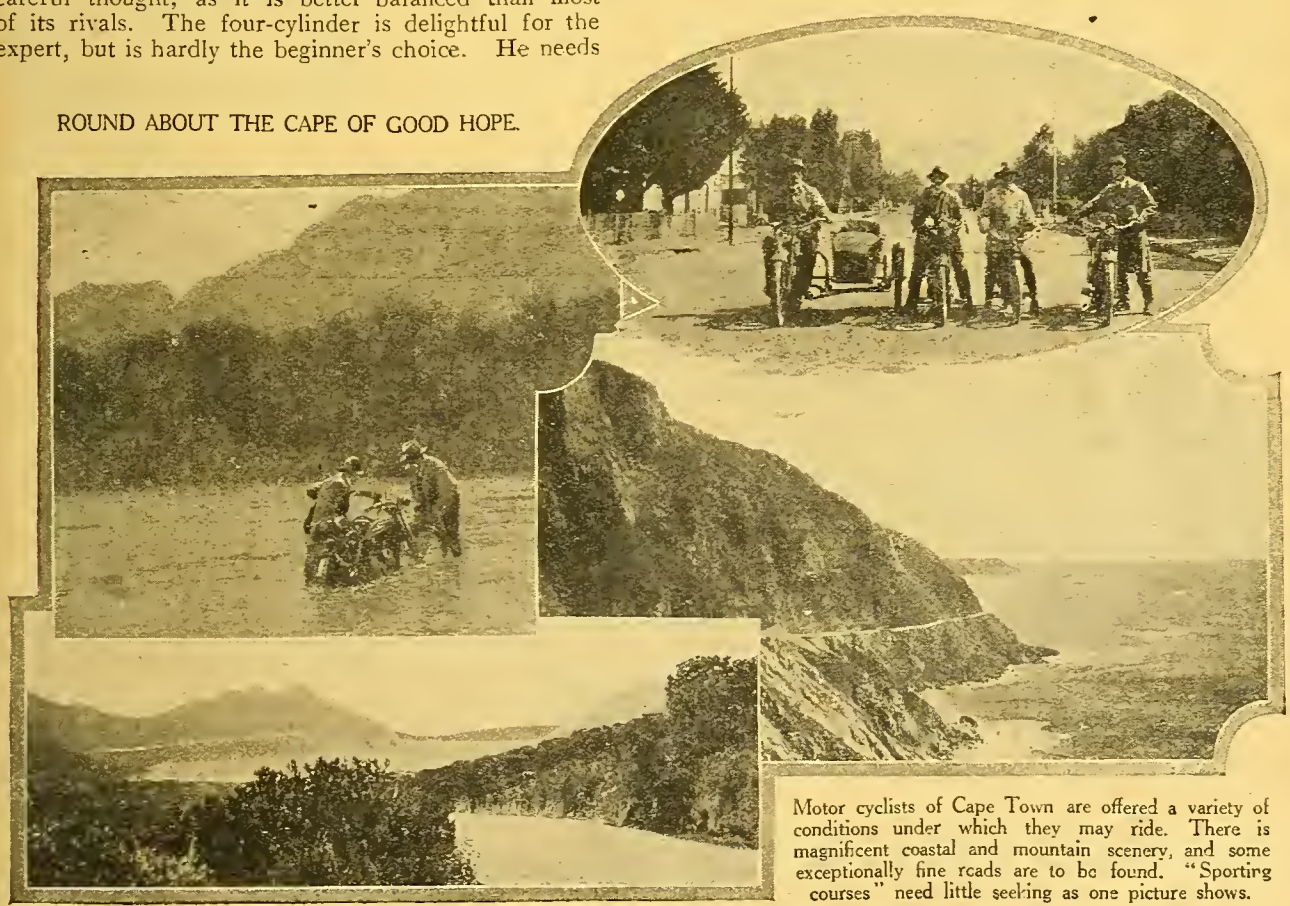
Multi-cylinder engines are not specially desirable for novices, and a single-cylinder is probably the best for the beginner if an engine is being selected with a view to ten years' work. The flat twin deserves careful thought, as it is better balanced than most of its rivals. The four-cylinder is delightful for the expert, but is hardly the beginner's choice. He needs something as simple and free from complication as he can possibly buy.

As most of the local agents are a little anxious about finding customers for all the machines for which they have contracted, the present is in one respect an excellent time to buy. The agent will take unlimited trouble to secure a sale, and there will be no difficulty about getting punctual delivery.

### How and Where to Buy.

When the list of possibles has been whittled down to two or three probables, an actual road trial may be obtained on application to the local agent. I wish to enter two pleas for the local agent, who is often a misused individual. In the first place, especially in these hard times, it is cruel to put the local man to a lot of trouble and expense, and then to purchase elsewhere. He should not be bothered unless there is a real intention of buying from him, provided the trial is satisfactory. It is, of course, up to him to prove that his machines are better than those of a rival local agency. Further, it is foolish for a beginner to buy from some distant source. Sooner or later he will either be puzzled by some elementary ignorance of his own, or encounter some petty trouble with his new purchase. If he has placed his order locally, the local agent will see him through, possibly without charge. If he has bought his machine 100 miles away, he will be a forlorn little figure, crying in the wilderness, with nobody to befriend him except by a "postal put-off." B.H.D.

ROUND ABOUT THE CAPE OF GOOD HOPE.

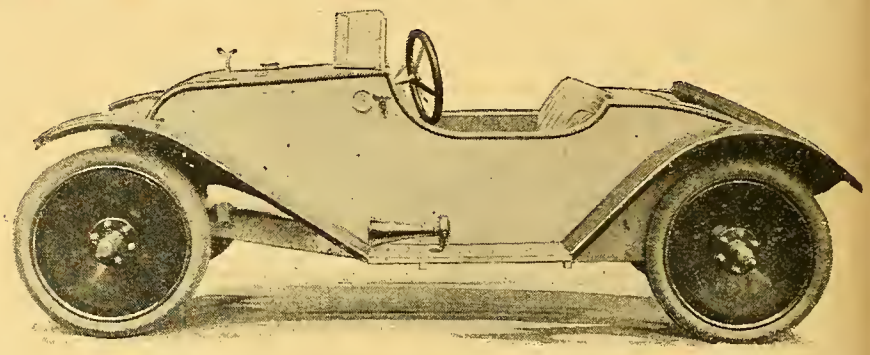


Motor cyclists of Cape Town are offered a variety of conditions under which they may ride. There is magnificent coastal and mountain scenery, and some exceptionally fine roads are to be found. "Sporting courses" need little seeking as one picture shows.

# A FOUR-WHEELER ON MOTOR CYCLE LINES.

## Air-cooled Twin Engine, Proprietary Gear Box and Chain Drive on the Bow-V Cycle Car.

CONSTRUCTED on motor cycle lines, though giving the comfort and protection of a small car, the Bow-V car is intended to take the place of the ultra-expensive sidecar outfit. No actual chassis is to be found in its construction since the bodywork serves as a frame, but at the rear there is a tubular framework on which is mounted the 1,090 c.c. Precision V twin (85×96 mm.) engine, fan-cooled, and provided with a Degory carburetter. In the centre of this tubular framework are two longitudinal members which carry engine and gear box, the latter being adjustable for the purpose of taking up any slack in the engine chain. From the engine power is transmitted through a chain to the clutch on the Jardine four-speed gear box, while the final drive is from the gear box by chain to the back axle, which latter runs in four ball bearings, two at each extremity and two in the centre. For adjustment of the second chain provision is made for sliding the axle bearing housings along the frame.



A neat little cycle car embodying motor cycle practice in its construction, the Bow-V.

### Hand Starting from Driver's Seat.

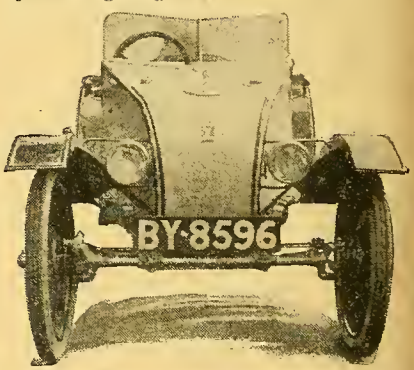
Situated at the right-hand side of the chassis is a lever on which an exhaust lifter is mounted. This is connected by means of a rod to the "kick-starter" mechanism in the gear box. Cable and bobbin steering is provided, and this is well caried out, there being shock absorbing springs at the ends of the cables where they are connected to the steering arms.

So far as the control is concerned, change speed and side brake levers are centrally situated in the body, which latter, together with the wings, is constructed of three-ply wood. Brake, clutch, and accelerator are disposed car fashion, while the design of the clutch and brake pedals is worthy of mention. A roller is interposed between the pedal and the lever to which the actuating rod is attached, and the position of this roller can be so varied that the leverage may be adjusted to suit requirements. Two brakes of the external contracting pattern are fitted.

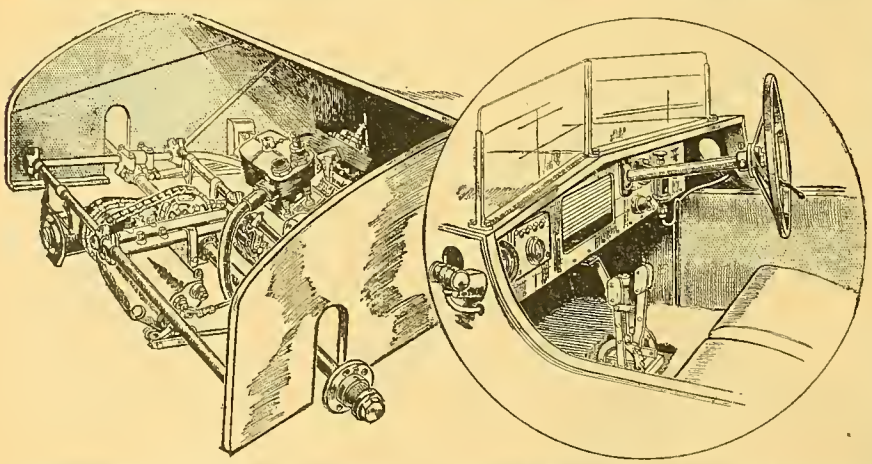
Mounted on the instrument board are the lighting switches, speedometer, and usual fittings, and there is a locker with a "roll-top" cover for maps and other oddments. Illumination of the instruments is provided for by windows in the scuttle adjacent to the side lamps.

### Passengers Insulated from Power-Unit.

Cantilever springs are employed for the suspension, these being anchored with rubber buffers, so as further to lessen the road shocks. It will be seen, however, that the power and transmission unit is carried as unsprung weight. The little vehicle is fitted with five Lynton 650×65 mm. interchangeable disc wheels. The wheelbase is 7ft., the track 3ft. 5in., and the overall width 4ft. 3in. It is manufactured by the Plycar Co., Stoney Lane, Church Road, Upper Norwood, London, S.E.19, and is designed by Mr. C. F. Beauvais, who has studied this type of vehicle for a number of years. Its price complete is £180. £200 with dynamo lighting set.



No attempt has been made slavishly to imitate car practice by fitting a dummy radiator.



Arrangement of power unit and transmission, showing location of the Jardine four speed gear box.

Change speed and brake levers are centrally situated, and a well-equipped instrument board fitted.

## THIS YEAR'S INTERNATIONAL SIX DAYS TRIAL.

Now that the T.T. is over, a trial comes into prominence which is well worthy of the consideration of British manufacturers. This is the International Six Days Trial, organised by the Swiss Motor Cycle Union. Each country belonging to the Federation of Motor Cycle Clubs is invited to send a team to compete for the handsome trophy presented by the British Motor Cycle Manufacturers' Union. The trophy was won by the Swiss club last year, consequently this year's trial will again be held in their delightful country.

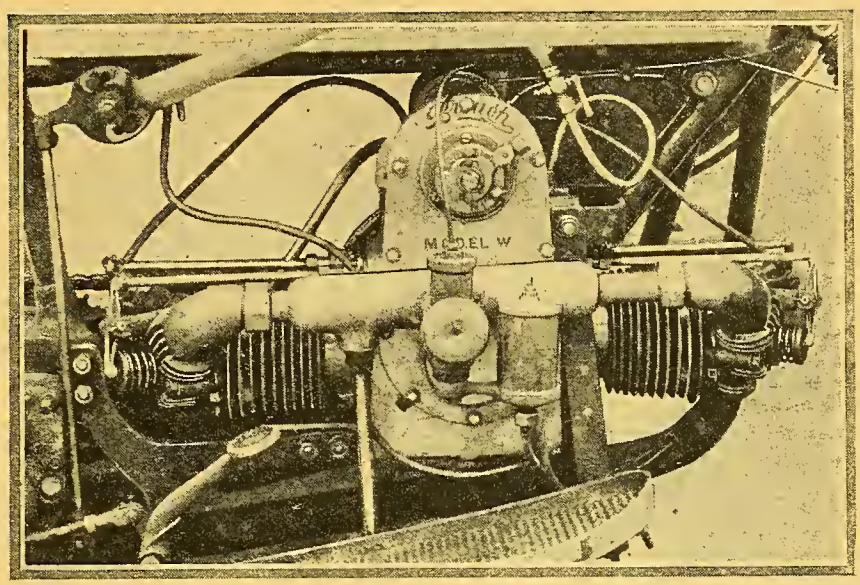
The organisation for this year's trial is now complete, and route cards and road maps are being despatched to all likely entrants, while the final programme will be issued during the present month. A distinct improvement lies in the fact that there will be one day's rest at Lugano, on August 6th, when competitors will be able to watch an interesting hill climb on Monte-Bré. A special scheme has been devised on the coupon system by which competitors and officials will be relieved of all anxiety as to meals and lodgings, and special terms are being arranged.

# A REVISED SPORTING FLAT TWIN.

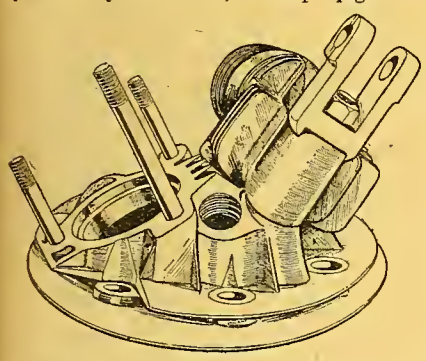
## Detail Modifications to the 497 c.c. Sports Brough Engine and Gear box Unit Assembly.

FOR many years past the productions of W. E. Brough, Ltd., of Basford, Nottingham, have been confined almost entirely to flat twin engines, the 692 c.c. sidecar machine and 497 c.c. overhead valve solo machine being already well known. It is not, therefore, surprising to find that the latest sports model retains the same general outlines in that it has opposed cylinders with overhead valve gear. Bore and stroke remain the same (70 x 64.5), but very considerable modifications have been made in the cylinder head and various other vital points.

A special head is bolted down to each cylinder by six studs, a deep spigot is employed having ground surfaces to ensure close contact. The inclined valves seat directly in the head, but the valve ports are detachable and held on by three studs in each case; one of these studs is both longer and larger in diameter than the other two and serves to hold the forked rocker bracket in position. The sparking plug lies between the rocker brackets and is inclined at a considerable angle. Cooling ribs are embodied with these parts wherever extra surface has been found to be desirable. Tubular push rods are employed, and these are operated from the camshaft through roller-ended tappets, an adjustment being supplied at the lower end of the rods. There are four cams on the solid camshaft, which is mounted on roller bearings. Supported in combined plain and roller bearings, the crankshaft has plain big ends and is connected to the light aluminium pistons by H section connecting rods, the compression ratio being approximately 5 to 1. On the end of the magneto driving spindle a Best mechanical pump is fitted, and the ribbed engine base is extended backwards to carry a three-speed Sturmey-Archer gear box, so that a unit is formed by the main power and transmission plants.



The experimental 497 c.c. Sports Brough engine is at present fitted in a standard frame; the salient features are very clearly visible.



One valve port has been removed to show more clearly the construction of the new Brough cylinder head.

Roller ended tappets are operated direct by the cams.

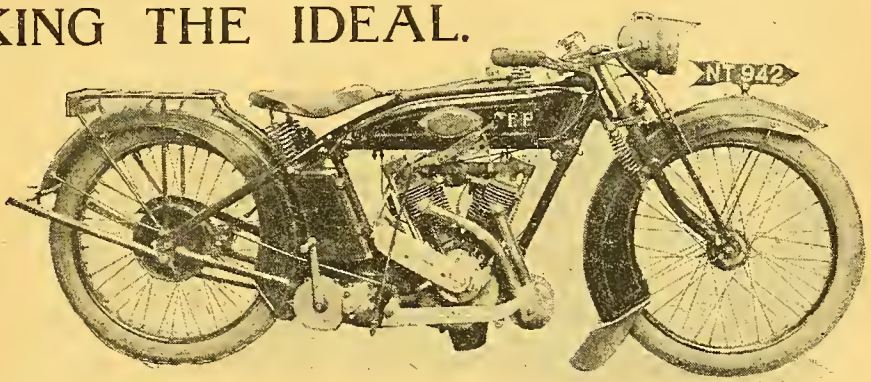
# SEEKING THE IDEAL.

## An Owner-built Big Twin Solo Machine.

FROM time to time our mail bag contains descriptions of home-built machines which illustrate the ideals of the constructor. Often these are ingenious and sometimes they are practical, but it is seldom that we come across a machine so thoroughly well turned out in every detail as that which has been constructed by T. F. Parkes, of The Croft, Madeley, Salop, for his own use.

A 993 c.c. M.A.G. engine and Burman three-speed gear box form the main essentials round which the machine has been designed.

Strictly speaking, the frame is conventional, but the slightly sloping top tube combined with a long easy downward curve produces very pleasant lines and provides a low saddle position. The saddle, by the way, is a Lycett hinged from the top tube at the nose and supported at the back by very large coil springs mounted on a combined mudguard support and fork bridge. Both the M-L magneto and the carburetter are controlled by twist grips, and a speed indicator on the top tube is driven from the rear wheel, the necessary gears lying inside the driven sprocket.



Built to a rider's ideal. A 993 c.c. M.A.G. engined machine assembled by one of our readers.

# THE CLUB TEAM CHAMPIONSHIP.

## Next Saturday's M.C.C. Inter-club Team Trial for "The Motor Cycle" Challenge Cup. List of Teams with Order of Starting.

AS on previous occasions in recent years the Rose and Crown Hotel, Tring, is the headquarters of the M.C.C. for the Inter-Club Team Trial for *The Motor Cycle* Challenge Cup. Punctually at 1 p.m. the first team will be started at a point near Tring on the 33 mile circuit which each team will have to cover three times in succession.

Those who wish to witness the event had better proceed to Kop Hill, taking care not to impede the course with their machines.

**Team No. 1.—Sheffield and Hallamshire M.C. and L.C.C.**

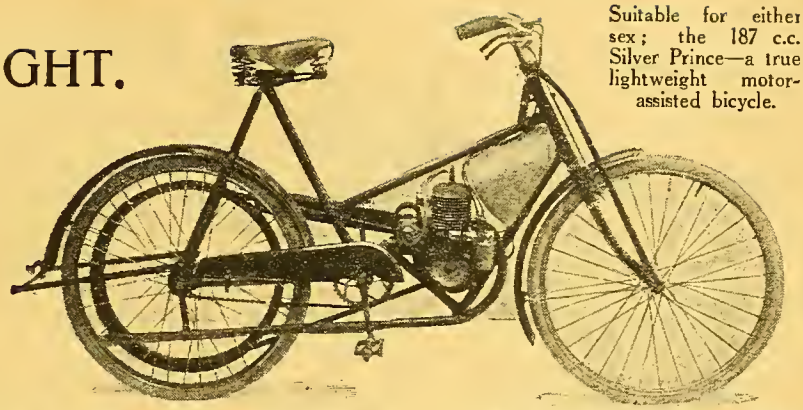
# A GENUINE LIGHTWEIGHT.

## Tiny Two-Stroke Engine in a Special Open Frame Pedal Cycle.



Suitable for either sex; the 187 c.c. Silver Prince—a true lightweight motor-assisted bicycle.

WEIGHING less than 70lb., and selling complete at 25 guineas, the Silver Prince featherweight is likely to attract a large number of cyclists who wish to extend their normal radius of action.

The little engine which is fitted is of the three port type, having a bore and stroke of 63 × 60 mm. respectively (187 c.c.), and plain bearings throughout. The crankshaft is carried in single long bearing with an outside flywheel well clear of the pedalling gear; direct belt drive with a ratio of 7 to 1 is employed, and the tank has a capacity of just over a gallon of petrol and oil mixture.

In its latest form this miniature motor cycle has a lower frame, the saddle of which is the same height from the ground as that of an ordinary lady's cycle. With the exception of a strengthened head lug and somewhat heavier gauge tubing, all parts are standard cycle sizes, the front forks are stiffened by auxiliary girders, chain and belt guards are fitted, and an expansion chamber of considerable dimensions will be part of the standard specification. The tyres are 26 × 1½, and brakes consist of an Eadie back pedalling brake in the rear wheel, and an ordinary cycle brake in front. We took the opportunity of a short trial run on an experimental machine, and found it extremely flexible and easy to bandle. In addition to this the engine is wonderfully well balanced, and appears to have ample power for all normal hills.

# RESULTS OF THE CAR T.T. RACES.

## "The Autocar" Series of Telegrams denoting Progress and Results.

A LARGE percentage of our readers will be interested in the Tourist Trophy Car Races to be held in the Isle of Man to-day, Thursday. The same course as was used for the Motor Cycle Races has been adopted for the car races organised by the Royal Automobile Club, and the two events will be run concurrently, starting at 9.30 a.m. In the case of the International T.T. Race for cars of 3,000 c.c., eight circuits = 302 miles, will be covered, and in the case of the 1,500 c.c. Trophy, six circuits = 226½ miles—the same distance as the Senior Tourist Tropky Race for motor cycles. Our parent journal *The Autocar* has arranged to issue a series of telegrams (as was the case with *The Motor Cycle* in connection with the Motor Cycle Races) throughout the country denoting the progress and results of the two events. In 1914 the winner of the Car T.T., which occupied two days, averaged 56.44 m.p.h. for 600 miles. This year's Senior T.T. winner, A. Bennett (Sunbeam) averaged 58.33 m.p.h. There seems very little doubt but that Bennett's wonderful performance will be eclipsed in to-day's race. Appended is a list of the points at which *The Autocar* series of telegrams will be displayed.

### THE 1,001ST NUMBER.

Sir,—Congratulations on your excellent 1,001st number.
Darlington. W. B.

Sir,—Good luck to the next 1,000 "Blue 'Uns."
Enfield Lock. A. O. B.

Sir,—We wish to tender you our best wishes on the occasion of the 1,000th consecutive number of your most excellent journal. HOLROYD AND COLLIER.

Sir,—In sending best wishes on the occasion of attaining your 1,001st number, I should like to thank you for the manner in which you have helped to guide the fortunes of the motor cycle industry. MANUFACTURER.
Birmingham.

Sir,—Many happy returns of the day. My family and I have only one fault to find with *The Motor Cycle*—it ought to be a daily. From Thursday to Thursday is a long, long time. OLIVER TWIST.
S.W.16.

Sir,—Although perhaps a little late, I must congratulate you on your 1,001st number of *The Motor Cycle*. I was very much interested in seeing the early patterns of motor cycles, with all their troubles, etc., on the road, and especially the 2½ h.p. Minerva. I should like to say that I owned one for a long time and can well remember the dry battery becoming exhausted when least expected. There was no magneto ignition in those days. Still, I had lots of fun on it, and altogether have pleasant recollections of the same.

Strange to say, my next mount was a 3½ h.p. Minerva, but this was fitted with a low tension magneto. On the two Minerva machines I covered nearly 9,000 miles.

I quite agree with the remarks of J. Dente Watts respecting "Ixion's Reminiscences," and am eagerly looking forward to more of the same sort being published. I think I had good value when I purchased this book. *The Motor Cycle* is another example of good honest value. Best wishes for your blue cover. T. 2955.
Bude.

### THE FATHER OF THE TWO-STROKE.

Sir,—In your issue of the 8th inst., we note with surprise in Mr. B. H. Davies' article, the Levis is referred to as the "Grandfather of all Two-Strokes, and even the Scott is its great overgrown hobbledehoy of a son." Surely some mistake has been made here, as the Scott was on the road many years before the public ever heard of the Levis.

If our memory serves us rightly, it was in 1904 when the Scott engine was patented and the complete machine was marketed in 1909, but in a previous year the machine appeared in competitions and hill climbs, both in the Midlands and in the North Country, and because of successes the two-stroke was handicapped by the A.C.U. 1.32 capacity formula.

We think we are right in saying that Mr. Scott has an engine fitted to a boat similar in principle to the one on the machine, which was made in 1901, and is still giving excellent service.

THE SCOTT MOTOR CYCLE CO., LTD.,
H. O. WOOD, Technical Adviser.

### HOW STEEP IS IT?

Sir,—Can one of your readers tell me the name and gradient of a hill which lies on the outskirts of St. George's, on the way to Wellington, Salop?

It is, I should imagine, about 1 : 5. I am rather proud of my performance of coming up this hill on a 494 c.c. twin sc., with a bottom gear of approximately 8 to 1, and 22 stone aboard. OE. 2990.
Birmingham.

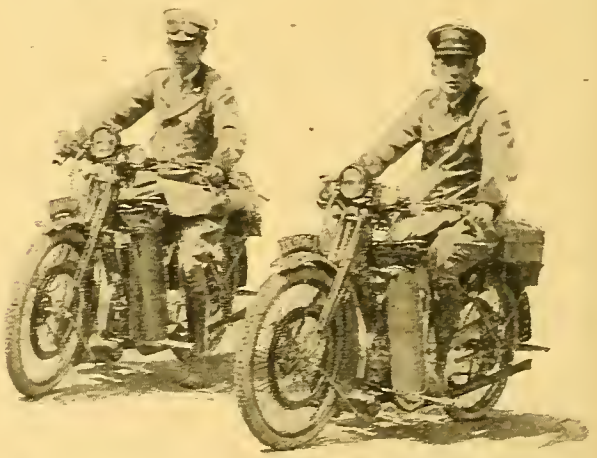
### SPRING FRAMES AND RACING.

Sir,—I noticed "Ixion's" comment on spring frames and racing with interest, and from personal experience thoroughly agree with him. I possess a Triumph-engined machine (engine considerably hotted up), with the latest "Warner" spring frame. My mount steers perfectly up to 60 m.p.h. (my limit), and holds the road far better than a rigid frame, potholes and ripples having absolutely no effect on steering.

I think it is only a matter of time before our real speed merchants adopt a spring frame. C. M.
Coventry.

### FUEL CONSUMPTION.

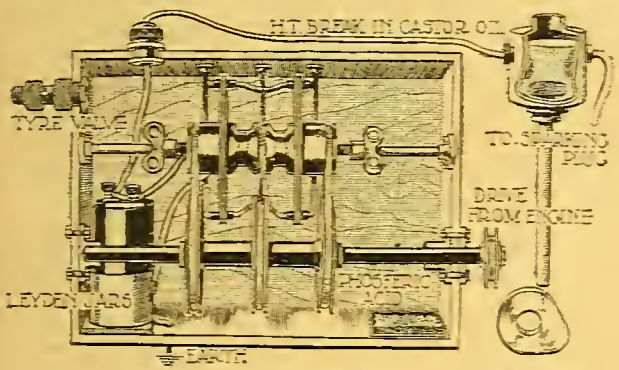
Sir,—Perhaps this may be of interest to some of your readers:—I recently covered a 100 mile run, through Stratford-on-Avon, Stow-on-the-Wold, Broadway, etc., over hilly country, on three-quarters of a gallon of benzol, that is, over 130 m.p.g. My machine is a 3½ h.p. Ariel, over three years old, with 10,000 miles to its credit, fitted with Binks' carburetter and F.E.W. valve attachments. "Spots" were used in the fuel. I have also obtained over 95 m.p.g. with heavy sidecar and passenger. O.B. 8387.
Birmingham.



Many of the R.A.C. scouts have for a long time past been equipped with motor cycles. The two shown are part of a consignment of Joys recently delivered to the R.A.C. for patrol work, all of them being finished in R.A.C. blue.

### INFLUENCE MACHINES FOR I.C. ENGINES.

Sir,—I was interested to know of Mr. Freeman Lee's knowledge of the superiority of such machines over the induction coil. As an experimenter I have made and used several static machines for illuminating vacuum tubes of my own construction, and I think the current from the coil is by far the inferior. A tube lit from an influence machine is beautifully filled with soft light, but with a coil it is rather of a forced nature. Enclosed is a sketch of the lay-out, for use with an internal combustion engine. The static machine is enclosed in a strong wooden box kept at a pressure of three or four atmospheres by means of the cycle valve, the air being pumped in now and then by means of a cycle pump. A tray of phosphoric acid dries the air

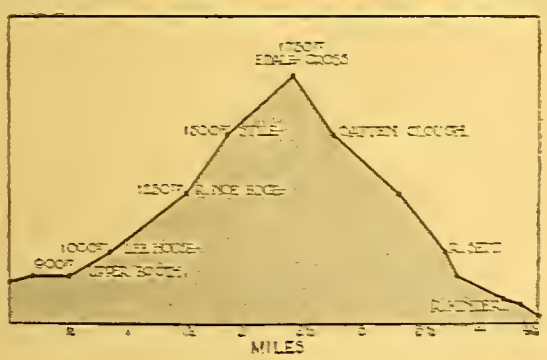


Layout of static machine suggested by our correspondent.

inside the box, and ensures the working of the machine in all weathers. The high tension break is composed of an insulated box of small size made preferably of ebonite; inside are two brass contacts placed opposite one another, and a piece of round brass placed on the top of an insulated rod actuated by a cam completes the circuit at the sparking stroke. The break should be filled with castor oil, so that no discharge takes place until the cam rod rises and touches the contacts. The machine may be of the Wimshurst type, and the plates about four or five inches in diameter. I have made a machine with the plates four inches in diameter, and it gives a continuous spark threequarters of an inch. The sparking plug points may be used a little wider than usual owing to the Leyden jars being charged to such a high potential. A. LUTMAN.

### JACOB'S LADDER.

Sir,—Referring to Mr. Dudley's letter on page 738 of your issue of June 1st, I have pleasure in enclosing herewith a contour sketch of the above hill showing the average



Contour of Jacob's Ladder between Edale and Hayfield, Derbyshire.

gradients on different sections. The figures are taken from the 1in. Ordnance map. There is one part where the rise is 250ft. in ½ mile. This is an average figure, the actual gradient is constantly varying.

I "discovered" the hill about the year 1906, but unfortunately my first machine—a 1902 Centaur 30×30,—was not quite up to this class of work.

I don't think the hill is practicable for sidecars; part of the path runs between walls which are rather near together. CYRIL STYRING.

Sir,—With reference to Mr. P. H. Dudley's remarks about his discovery of a freak hill named "Jacob's Ladder."

I have an idea that the hill he mentions was included in the English Six Days in 1914.

I am sure that if Mr. Dudley will obtain a copy of *The Motor Cycle* for July 23rd, 1914, he will find illustrations of competitors negotiating the hill he mentions. H.D. 1628. Mirfield.

[In the A.C.U. Six Days Trial of 1914 the competitors descended and ascended a hill known as Jacob's Ladder, which, however, is not the hill referred to by our correspondents.—Ed.]

### NOT TWO-STROKES.

Sir,—In reference to the letter from "F. J. D." (Gloucester) about Scotts running without oil or petrol, in 1915 I saw Scotts run without same. *They were chasing "Jerry."* W. E. F. Southsea.

### R.A.C. SALUTES.

Sir,—With regard to "Ken Bush's" letter, may I say that my own experience entirely corroborates his? There is a scout at Banbury and I have only been saluted by him once, although I have passed him on numerous occasions. Another A.C.U. cyclist here tells me he has had exactly the same experience not only here but near London. P.C. 549. Brackley.

Sir,—It is interesting to read the remarks of Ken Bush in reference to the omission of the patrols of the R.A.C. to salute. I find the real grievance is where to find the patrols, so few and far between in comparison to the A.A. One can journey many miles along the main roads without meeting an R.A.C. man. In fact, it would be interesting to know how many patrols are employed within a radius of fifty miles from London. The A.C.U. ask for suggestions to popularise the Union, and I would suggest that a list showing where its patrols are to be found should be issued to each of its members. A. MARTIN CYDER. W. Ealing.

### ELIMINATE THE PRIMARY CHAIN.

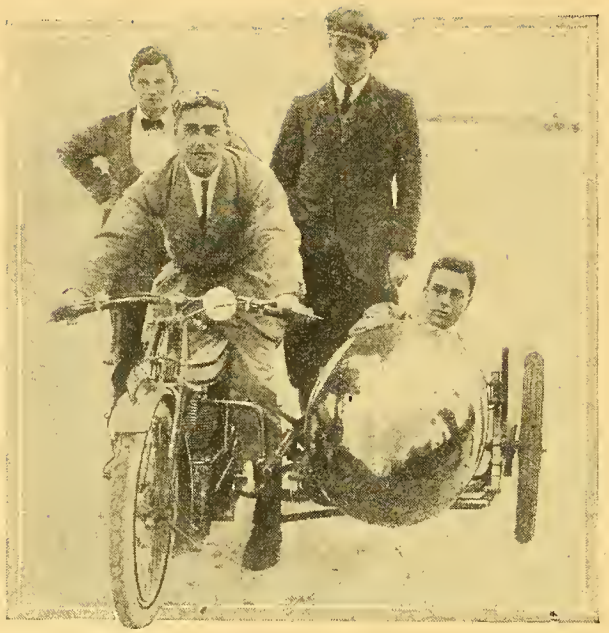
Sir,—I should very much like to add my small quota of congratulation and criticism to that of "M. L. L."

My first introduction to motor cycling was when as a small boy at school, proud and joyful, I brought home my first mount, a 2½ h.p. Ariel, which had cost me just fifty shillings! The world has progressed since then. I have ridden many makes, good, bad, but mostly indifferent, and, although I hope I shall not call down on my head the curses of some ultra enthusiast of other makes, I must say that until two years ago, when I bought my first Scott, a 1920 sports model, I never realised how close a motor cycle could get to perfection without realising perfection.

I have now made six journeys from here (Bangor) on it to Norfolk, 270 miles, and on only one occasion have I had an involuntary stop, through a broken chain, due to my own negligence in back wheel adjustment: my petrol consumption on these trips works out at about 90 m.p.g. solo, and about 75-80 m.p.g. sidecar, while on a petrol consumption trial last year my Scott walked in first, passing all the "bhoys" with a consumption of 150 m.p.g.!

But after the sweet—the bitter; the perfection of the engine and comfort of frame only seem to accentuate the imperfection of the transmission. The Scott Sociable has, I believe, a three-speed integral with the crank case—why not the Scott motor cycle? Why is this nest of chains, which are the cause of endless barked knuckles and lost souls, still retained? Perhaps the Scott Company will tell us.

THOS. E. W. BROWNE,
Capt. Univ. Coll. of Wales M.C.C.



THE NAVY AT BROOKLANDS.

A group of naval motor cyclists at a recent Brooklands meeting. On the saddle is Lt. A. G. Smith, R.N., who, despite the fact that he has only one leg, put up a good race on his Norton and sidecar. Behind him, standing on the right, is Lt. E. S. K. Evans Greaves, R.N., winner of the Arbuthnot Trophy in 1919 and A.C.U. consul for the Royal Navy, while on the left is Lt. R. C. Hovenden, R.N., who took part in last year's Arbuthnot Trophy. The passenger is also a naval officer. A feature of the meeting was the success of Lt. R. G. T. Grogan, a naval rider who won one race and came in third in two.

### *NO AGE LIMIT.*

Sir,—My attention has been drawn to a letter which appeared in a recent issue from a reader wishing to know if 58 years of age was too old for motor cycling.

I am a regular and consistent rider; on Saturday afternoon last I took with me a lady passenger, and our united ages are a few months short of 160 years. Is this a record?

W. A. DYER.

### *MOTOR CYCLE TAXATION.*

Sir,—G. J. Hickling suggests that "push-bikes" should be taxed 5s. Let me just suggest to him and others, through the medium of your valuable paper, that as things are going on it doesn't seem as though the Government will alter the present system of taxation yet awhile, and we are taxed enough as it is, so I say don't suggest anything else should be taxed. Probably 75 per cent. of motor cyclists use pedal cycles at one time or another, and I'm sure they don't want an extra 5s. tax just "thrown in for luck."

Hitchin. N. K. 1660.

### *DOT AND CARRY ONE STROKES.*

Sir,—While traversing the main Oxford-London road I observed a single-speed two-stroke approaching me at about 15-20 m.p.h. The machine was running quite regularly, but cutting out for two revolutions at the end of every seven or eight, as far as I could judge. The rider did not appear to be disturbed, and behaved as though his bike always ran in this extraordinary fashion. Have any of your readers experienced this erratic running with two-strokes?

I should be much interested to know the cause. The most remarkable fact was that the engine did not splutter or misfire once. I could hear the engine for about a quarter of a mile. "CELERITAS."

Oxford.

### *OVERSIZE TYRES.*

Sir,—It may interest some of your readers to know that the 26in. × 2½in. Dunlop Magnum cover fits a 24in. × 2in. wheel. I have been running one of these covers on the back wheel of my Omega-Villiers for the last five hundred miles, mostly with a passenger, and have found it a great success except for a slight roll on corners. D. V. AKEROYD.

35, Falkner Square, Liverpool.

### *A VERY FULL WEEK.*

Sir,—As one who was in the Isle of Man for a week, and left by the 4 o'clock boat Thursday, travelling all night to reach London in time to start for the London-Edinburgh, and having successfully completed the run, returned by the night train from Edinburgh, arriving in London again on Sunday morning, I should be very interested to hear if any other rider in the Edinburgh run did the same amount of travelling in such a short time. F. J. YOUNGS.

### *GEAR RATIOS FOR THE TOURIST.*

Sir,—I consider it high time the subject of gear ratios on sidecar machines received further ventilation, and can heartily sympathise with "Jay Cai See."

For the tourist who desires to keep up a fair average speed up hill and down dale it is essential that the second gear should be considerably closer to the top than is the usual practice at the moment, and in this respect the high-class sidecar compares very unfavourably with the average European car.

For the last 12 months I have been riding one of the most famous 8 h.p. sidecars—undoubtedly an excellent machine—but the top gear is so low that really steep hills can be surmounted without a change, and at 35 m.p.h. vibration becomes very unpleasant owing to the excessive engine speed, also the maximum is limited to just over 40 m.p.h. When second gear is resorted to the speed drops to a wretched 15-18 m.p.h. unless the engine is unmercifully raced.

From memory I believe my top gear is just under 5 to 1, and the second is about 8½ to 1, i.e., less than 70 per cent. drop, and I am astounded to see in the letter from Messrs. Martinsyde, Ltd., that on their machines the top and second gears are respectively 5¼ and 11 to 1, i.e., over a 100 per cent. drop!

Personally, I do not think we shall reach the ideal until the four-speed box becomes standard practice, and I hope by the time the next Olympia Show comes round we shall see some of the leading makes fitted with such a box giving ratios of, say, 4½, 6½, 9½ or 10, and 14 or 16 to 1, which should suit the ordinary 8 h.p. outfit admirably, and would also add considerably to its average speed and increase the pleasure of driving immensely. F. SMURTHWAITE.

## Books & Maps for Motor Cyclists.

Issued in conjunction with *The Motor Cycle.*

**"MOTOR CYCLES AND HOW TO MANAGE THEM."**
The standard handbook on the motor cycle.
Price net, 2/6. By post, 2/10.

**"HINTS AND TIPS FOR MOTOR CYCLISTS."**
Eighth Edition. Price net, 2/-. By post, 2/3.

**"TRACING MOTOR CYCLE TROUBLES."**
A system for tracing motor cycle faults and of remedying them when found. Fourth Edition.
Price net, 2/-. By post, 2/3.

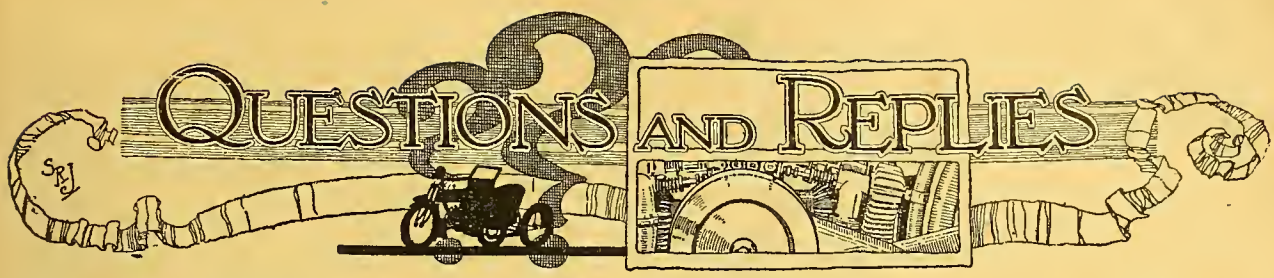
**"TWO-STROKE MOTOR CYCLES."**
A reliable treatise on Two-strokes, from the rider's point of view. Price net, 3/-. By post, 3/3.

**"MOTOR CYCLE REMINISCENCES."**
By "IXION," of *The Motor Cycle.*
Cloth Bound. Price, 5/-. By post, 5/3.
Paper Boards. Price, 2/6. By post, 2/9.

**"THE MOTOR CYCLE" ROAD MAPS.**
**Set of Three Maps—England and Wales, Scotland, London.** Set of three, complete in case. Price net, 5/6. Book post, 5/10. **Set of Two Maps—England and Wales, London.** Price net, 4/6. By post, 4/8.

**"THE MOTOR CYCLE" ROUTE BOOK.**
With 32 pages of Road Maps. Price net, 2/6. By post, 2/10.

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., Dorset House, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.



A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 2d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

### TO FIX TRANSFERS.

Having purchased a set of transfers for my tank, I should be obliged if you could let me know the best way to put them on.—G.D.

Take a very small quantity of copal varnish, gold size, or any quick-drying varnish, coat the face of the transfer as thinly as possible (a short hog-hair brush is recommended for this), and let it remain for a few minutes, when it should be just tacky. Cut away all paper from around the transfer, then place it face downwards on the tank, pressing well down, either with a pad or roller, taking great care that the transfer does not move. Damp back of paper with a moist rag or leather, slightly at first, and again press down, gradually increasing moisture until well soaked. The paper may then be lifted off. Wash over the face of the transfer lightly to remove any gum which may be left on the surface, otherwise the transfer is liable to crack, especially if it be a coloured one. When quite dry give a thin coating of varnish, which will improve the appearance of the transfer and also prevent it being damaged.

### REMOVING VALVE GUIDES.

I am dismantling my B.S.A. engine; please tell me: (1) What is the thread of the set screw in timing pinion (left or right). (2) Also the best way of removing the old valve guides.—A.S.

(1) The B.S.A. small timing pinion is secured with a right-hand thread conical headed screw which expands the shaft on to which the pinion is pressed. (2) Drop a set pin through the valve guide with a head which will not pass through the hole, then punch the head of the pin and the guide will drop out.

### VALVE TIMING.

Please give me the timing of valves for a 1914 4 h.p. J.A.P. engine. (2) Distance between magneto points when fully opened?—S.G.O.

(1) Set the exhaust valve to close just after the completion of the exhaust stroke. It will then commence to open when the piston is about one-seventh of the length of the stroke from the bottom of the firing stroke. The inlet should commence to open as the exhaust closes, and remain open for a little more than one complete stroke of the piston, or while the flywheels turn through about 200°. (2) The distance the magneto points should be opened is 4 mm.

## Important Dates.

**Fri., June 23rd, and Sat., June 24th—Irish Twenty-Four Hour Open Trial.**
**Sat., June 24th—M.C.C. Inter-club Team Trial for "The Motor Cycle" Cup.**
**Sat., June 24th—Midland Centre A.C.U. Open Reliability Trial.**
**Sat., July 1st—East S. Wales Centre A.C.U. Open Speed Trials.**
**Wed., July 5th—Eastern Centre A.C.U. Open Speed Trials.**
**Wed., July 12th—French Grand Prix.**
**Sat., July 15th—B.M.C.R.C. Members' Meeting at Brooklands.**
**Sun., July 23rd—Belgian Grand Prix.**
**Fri., July 28th, to Mon., July 30th—Anglo-Dutch Trial in Holland.**
**Thurs., Aug. 3rd, to Wed., Aug. 9th—International Six Days Trials.**
**Sat., Aug. 5th, and Mon., Aug. 7th—Irish Two-day Open Trial.**
**Mon., Aug. 7th—West S. Wales Centre A.C.U. Open Speed Trials at Pendine.**
**Sat., Aug. 12th—B.M.C.R.C. Members' Meeting at Brooklands.**
**Sat., Aug. 12th—North Wales Centre A.C.U. Open Reliability Trial.**
**Sat., Aug. 12th—Motor Cycle Races in Phœnix Park, Dublin.**
**Mon., Aug. 21st, to Sat., Aug. 26th—A.C.U. Six Days Trials.**
**Sat., Sept. 16th—The Scott Trial.**
**Sat., Sept. 23rd—500 Mile Race at Brooklands.**
**Sat., Oct. 21st—B.M.C.R.C. Championship Meeting at Brooklands.**

### FITTING A TWO-SPEED.

My machine is a 269 c.c. O.K. Junior, with direct drive, and, in view of this fact, I am having a 2-speed gear and clutch fitted. Will you tell me whether: (1) The magneto should have a control fitted? (2) The present 26×2in. tyres should be changed for 26×2½in. (3) Whether the last-named size of tyre will go on a rim designed for 26×2in. only?—T.H.P.

(1) This is optional, but it is a great advantage to have variable ignition. (2) Yes, they would be advisable. (3) The 26×2in. rim is the one for which 26×2¼in. tyres are made, but they will fit the B.S. D2 rim, which is slightly wider than the older rims of the first-mentioned size.

### MAGNETO QUESTIONS.

Having taken a Thomson-Bennett magneto (twin) to pieces, (1) Will you tell me the positions of the brushes and their functions. (2) How can I tell which way the magneto should run? There are no marks. (3) Is there any method of telling whether a magneto requires re-magnetising or not?—E.N.M.

(1) There are two carbon brushes conducting the high tension current from the collector ring and a carbon brush behind the contact breaker, earthing the back plate of the latter to the body of the machine. (2) The drive on the machine from which the magneto was taken should tell you this, but if it is not available examination of the contact breaker will provide the necessary information; the rocker arm of the breaker has a trailing action, i.e.: the fibre heel follows on rocker pivot in relation to the direction of rotation. (3) The surest indication is whether or not the magneto gives a good spark.

### CARRYING AN ACCUMULATOR.

What is the best position to carry an accumulator on an A.B.C. motor cycle? I do a considerable amount of riding over rough roads. Do you think it would save the accumulator from road shock if I fitted a sprung platform in the bottom of the accumulator box, or would fixing to the handlebars be of any advantage?—J.H.B.

The position in which the accumulator would receive the least vibration is somewhere approximately half-way between the handlebars and saddle. A sprung platform at the bottom of the accumulator box would probably cause more trouble than a rigid fixing. Our own experience is that delicate articles suffer least the more securely they are fixed to the main frame of the machine.

### MISSING AT LOW SPEED.

The front cylinder of my 350 c.c. flat twin continually "misses" at slow speeds and when the engine is running idle throttled down. It never misses at high speeds. The engine nearly always starts on the back cylinder unless a very rich mixture is given, then it will tick over on both cylinders. There are no air leaks and the plug is all right. The points of the magneto contact breaker

do not separate quite as far for the front cylinder as for the back one; this appears to be due to the position of the contact breaker cams. The spark appears to be the same; changing over the plugs makes no difference. Can you suggest the cause of the trouble?—F.W.E.

The trouble may be due to one of three things: the tappets have not been carefully adjusted for the cylinder, which misfires, the absence of a warming device to the carburetter causes condensation on the inlet pipe, or an inlet valve guide may be worn and thus cause an air leak. The last suggestion is the most probable.

### STARTING DIFFICULTIES.

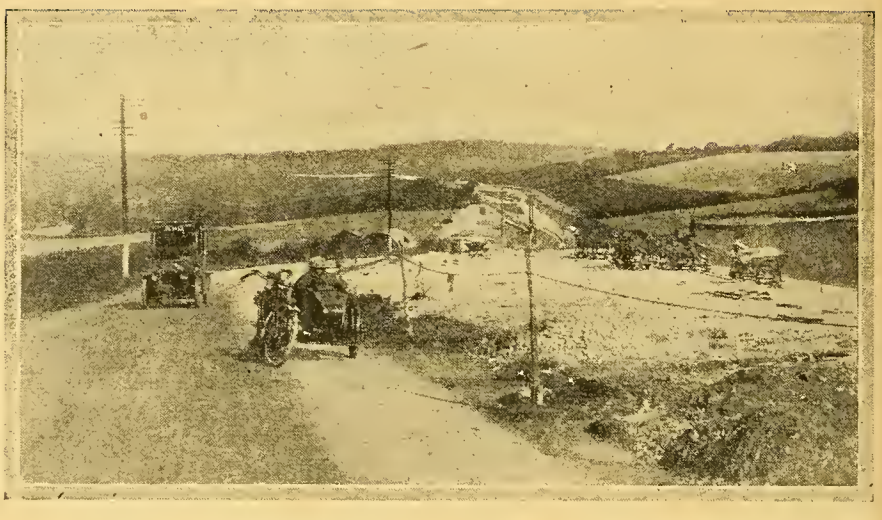
Q. I am a rider (novice) of a 770 c.c. twin, and am having difficulty in starting up the engine, due to the power needed to work the kick-starter, which sometimes can hardly be depressed, even after running a few miles. Is this caused by too much or too thick oil being used?—H.J.B.

It is difficult to say what is the cause of the trouble without actually seeing the machine. Cold weather may cause the engine to gum up, and paraffin injections may be necessary, but at this time of the year no such trouble should be experienced. You cannot go far wrong if you use the oil recommended by the makers.

### LOSS OF POWER.

Q. A 250 c.c. two-stroke which has just been fitted with new main bearings throughout has since lost much of its former power. Ignition appears to be correct, the carburetter, a Senspray, with 30 jet, also seems all right, and the compression is very good. (1) What do you think is the cause of this loss of power? (2) What is the correct timing for this machine? (3) What is the cause of constant four-stroking?—V.F.G.

(1) The loss of power may be due to the bearings being somewhat tight and the power may return after further use. (2) The engine should be timed as follows:—(If variable spark:) place the piston exactly on top of the compression stroke and connect up the magneto with the points just broken and the ignition lever fully retarded. (Fixed spark:) If for a hilly country, set the piston $\frac{3}{16}$ in. before the top of the stroke; if for a flat country $\frac{5}{16}$ in. from the top of the stroke. When in these positions the points should be in the act of breaking. (3) The symptoms mentioned here seem to indicate that a smaller jet would be desirable.



The extensive widening and straightening of many main roads during the last few years marks the beginning of a complete evolution in our road system—it is to be hoped. On the London-Folkestone road showing the alterations in progress between Swanley and Maidstone.

### SIDECAR ON SOLO LIGHTWEIGHT.

Q. (1.) Would it be detrimental to a 350 c.c. three-speed Douglas to attach a light sidecar occasionally, passenger weight never exceeding 9 stones. (2.) Suggested make of sidecar and recommended weight of same. (3.) What gradient might I expect the outfit to negotiate without passenger dismounting? (4.) Maximum speed advisable with passenger, on ordinary give-and-take roads. (5.) Best gear ratios?—F.A.R.

(1.) It would do no great harm to use a light sidecar, although it is not a machine made or recommended for sidecar work. (2.) Almost all the principle sidecar manufacturers produce a lightweight model which would be suitable; you should choose one weighing not more than 70 lb. (3.) This question is almost impossible to answer, as much depends upon the method of driving and the weight of the outfit with passenger. It should negotiate ordinary main road hills, however, up to about 1 in 10. (4.) You should be content with an average speed of about 18 to 20 m.p.h. (5.) $5\frac{3}{4}$ or 6 to 1 top gear ratio.

### REBORING CYLINDERS.

Q. (1.) Which of the two is the better for speed, pulling power, and general efficiency—a piston with one ring at the top and one at the very bottom (scraper ring), or a piston with two rings at the top and one scraper ring at the bottom? (2.) Does regrinding a cylinder weaken it or shorten its life to any considerable extent and how much is taken out of the cylinder bore in the operation?—"Arno."

(1.) In all probability you would not find any observable difference in the running of two engines of similar design if the piston ring arrangements were varied, as you suggest. (2.) Unless the cylinder is a very light casting, it will not weaken it appreciably if it is reground; the amount to be taken out of the cylinder bore depends entirely upon the degree of

THREE-WHEELER *v.* SIDECAR. E. B. Ware (1,074 c.c. Morgan) leading C. F. Temple (998 c.c. Harley Davidson) and H. Le Vack (976 c.c. Zenith), at a recent meeting at Brooklands.

ovality which has to be corrected; if the cylinder is as much as 10-1,000ths out of round, it would be advisable to submit it to a thoroughly reliable firm of cylinder grinders, and to take their opinion as to whether the cylinder would be safe in use afterwards.

## EXPERIENCES WANTED.

*Readers' replies to questions published under this heading should be addressed c/o The Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, when they will be forwarded direct to the querists concerned.*

R.Q. (Bootle).—350 c.c. New Scale and sidecar.

S.F. (Sutton).—654 c.c. Quadrant solo, m.p.g., comfort, etc.

J.A.H. (Harrogate).—Weatherell automatic engine lubricator on 976 c.c. twin J.A.P. engine. Oil consumption and distribution to cylinders.

L.L.P. (Birmingham). — Barr and Stroud engine. 654 c.c. Quadrant and sidecar.

E.K. (Sanderstead). — Auto-Wheel. Petrol consumption, vibration, overheating.

H.W.R. (Earls Colne).—Hopley or Paragon folding sidecars.

H.B. (Norwich).—976 c.c. Enfield (Vickers engine) and sidecar.

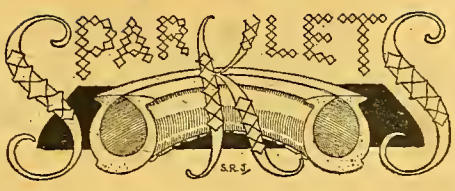
W.E.P. (Dewsbury).—348 c.c. A.J.S. Suitable sidecar, gears, etc.

## RECOMMENDED ROUTES.

BURTON-ON-TRENT TO GREENOCK.—O.A.H. Burton-on-Trent, Derby, Matlock Bath, Matlock Bridge, Rowsley, Chesterfield, Worksop, Doncaster, Ferrybridge, Wetherby, Harrogate, Ripley, Ripon, Catterick, Scotch Corner, Greta Bridge, Barnard Castle, Bowes, Brough, Appleby, Penrith, Carlisle, Rigg, Clarencefield, (edge of) Mouswald, Dumfries, Thornhill, Ayr, Troon, Ardrossan, Fairlie, Largs, Wemyss Bay, Greenock. Approximately 273½ miles.

A TOUR FROM SOUTHAMPTON.—P.M. Southampton, Millbrook, Redbridge, Totton, Ower, Wigley, West Wellow, Newton, Whaddon, Alderbury, Salisbury, Fugglestone, (edge of) Stapleford, Deptford, Codford St. Mary, Heytesbury, Warminster, Beckington, Woolverton, Limpley Stoke, Claverton, Bath, Corston, Marksbury, Farmborough, High Littleton, Farrington Gurney, Stone Easton, Wells, Priddy, Cheddar, Westbury, Wells, Glastonbury, Street, Piper's Inn, Greinton, Othery, Durston, Taunton, Wellington, Waterloo Cross, Cullompton, Exeter, Pocombe Bridge, Tedburn St. Mary, Crockernwell, Whiddon Down, Sticklepath, Okehampton, Downton, Tavistock, Grenofen, Horrabridge, Roborough, Plymouth, Plympton, Ivybridge, South Brent, Shinner's Bridge, Totnes, Paignton, Torquay, (edge of) Kingskerswell, Newton Abbot, Kingsteignton, Kennford, Exeter, Honiton Clyst, Fenny Bridges, Honiton, Yarcombe, Chard, Crewkerne, West Coker, Yeovil, Sherborne, Henstridge Ash, East Stour, Shaftesbury, Fovant, Wilton, Salisbury, Southampton. Approximately 383 miles.

(5–11)



### Revised Prices for Tyres.

Improved trade conditions have enabled the Goodyear Tyre and Rubber Company to reduce the prices of their motor cycle tyres. The revised prices are effective as from June 1st, 1922.

### Prices of Aluminium Pistons.

In the issue of June 8th, under this heading, it was inadvertently stated that the price of Specialloid pistons for an A.B.C. car was £6 per pair. This should have read as £10 10s. per pair, complete with gudgeon pins.

### Enfield Trophy Reliability Trial.

The sixth annual reliability trial for the Enfield Trophy will be held on Wednesday, June 21st, together with gold, silver, and bronze medals. Entrants have to maintain an average speed of 20 m.p.h. from Leeds to Aysgarth and back. The organiser is Mr. A. I. Greenwood, 39 and 41, Guildford Street, Leeds.

### Chains in the T.T.

A remarkably large percentage of the competing chain-driven T.T. machines were equipped with Renold chains. In the Senior Race the winner, third, fourth, to twenty-second and 96 per cent. of chain-driven motor cycles were fitted with Renolds, whilst every chain-driven machine in the Junior Race was fitted with these chains.

### A Stretched Cover.

In the issue of June 1st, it was stated in the report of the Junior T.T. that Hill (No. 70) arrived at Governors Bridge after four hours. Hill Bros., of Wolverhampton, manufacturers of the H.B. motor cycle, point out that the rear tyre came off after passing through Kirkmichael, and, owing to it having stretched, it was found to be impossible to refit the cover. This explanation should remedy any suggestion that the failure was due to engine or frame trouble.

### Uses of Dissolved Acetylene.

At a luncheon recently given by Allen-Liversidge, Ltd., at the Hotel Cecil, a film demonstrating the use of dissolved acetylene in various industries was shown. Several interesting facts were demonstrated, among which it may be mentioned that dissolved acetylene only occupies one-hundredth of its original bulk, and that the acetone with which the kapoc-filled cylinders are packed absorbs twenty-five times the amount of acetylene gas to every fifteen lb. per square inch pressure. A sidecar fitted with dissolved acetylene lighting was shown on the screen; while the fog-piercing qualities of acetylene illumination were also demonstrated, and an illustration shown of an acetylene stove boiling a kettle out of doors, the acetylene flame being unaffected in a high wind.

### Stolen Machines.

Matchless H., frame H 3868, engine 3868, sidecar 2814 (Ref. 101).

### Found on the Road.

A spanner and a pair of pliers on the Guildford Road last Saturday, found by Mr. W. H. Wherson, "Glenhurst," Linden Gardens, Leatherhead.

On the Great North Road, 10 miles from Catterick Bridge, Mr. A. B. Jelly, of 42, Danes Hill Road, Leicester, found a kit of motor cycle tools.

### C.A.V. Magnetos in the T.T.

During practice laps and the race, Norton motor cycles fitted with C.A.V magnetos covered an aggregate of over 20,000 miles without any sign of trouble, while the machines which started in the race got straight off the mark in the morning, from cold, without the slightest hesitation.

### In the Dublin Trial.

A gold medal has been secured by a Coulson machine in the Dunlop Cup Trial held recently in Dublin, when the machine was entered by Cumming and Dillon's Auto-Service Agency. It will be remembered that the Coulson also gained fourth place in the Isle of Man Junior Race, being ridden by R. Lucas.

### A Belgian Resort.

A booklet describing all that is of interest in Spa, that charming town in Belgium which has given its name to so many watering places in various parts of Europe, has been sent to us by M. Paul Dommartin, Rue David, Spa, Belgium. This point of the Ardennes is of particular beauty and has delightful surroundings. The roads are wide, straight and smooth, while in the neighbourhood is the famous Francorchamps-Malmédy-Stavelot course of the Belgian Grand Prix.

### Value of Crash Helmets.

It will be remembered that whilst C. Parkinson (D.O.T.) was riding in the Junior T.T. this year, he had the misfortune to break his handle-bars when travelling at speed. The front wheel broke away and the rider turned a somersault, landing on his head. He was wearing a crash helmet supplied by Herbert Robinson, Ltd., of Cambridge, and is of the opinion that it is to this helmet he owes his life.

### Catalogues Received.

W. G. Fearn and Co., Albion Works, Albion Street, King's Cross, London, N.1. illustrated catalogue of various types of Pinnacle sidecars.

The Dederich-Wooler Engineering Co., Alperton, London. A folder referring to the 1922 Dederich-Wooler, listing a three-speed chain-driven model at £78 10s., a touring model at £66 10s., and a semi-T.T. model with belt drive and variable pulley gear at £65.

The Fellowes Magneto Co., Ltd., Cumberland Avenue, Park Royal, Willesden, London, N.W.10. A well illustrated booklet concerning the Baby Fellows magneto for lightweights, giving a description of the working of the magneto, and concluding with a list of spare parts and illustrations.

### Official Results.

On page 860 will be found the official results of the recent London-Edinburgh Trial.

### A Cinema Star.

Mr. Henry Edwards, the cinema star, was an interested spectator at the recent T.T. Races.

### Club Team Championship.

A list of the riders in the teams competing in the M.C.C. team trial for *The Motor Cycle* Cup appears on page 842.

### Car T.T.

All eyes are again turned towards the Isle of Man, where the Car T.T. races are being contested to-day. Motor cyclists who wish to learn the progress of the race should refer to page 843, which contains a list of places where *The Autocar* telegrams are being displayed.

### Attracting Motoring Visitors.

In Scarborough the local motor club is co-operating with the Townsmen's Association in running first a rally of the "Richmond type" on the 24th, and on the following day a freak hill-climb at Johnson's Beck, apparently open to all. This idea of a motor club augmenting the season's attractions at a seaside resort is worthy of further development.

### To Avoid Nottingham's Traffic.

Nottingham City Council have approved of a scheme for the construction of a new road from Parliament Street to London Road for the diversion of traffic going east and west and having no occasion to pass through the central streets of the town. It is the biggest street improvement undertaken in hand in Nottingham for many years, and will cost £316,940.

### T.T. Sweepstake.

The following are the numbers of the winning tickets in the A.C.U. T.T. Sweepstake:

LIGHTWEIGHT: 22966, Davison; 22904, Young; 8032, Jones.

JUNIOR: 10214, Sheard; 8316, Grinton; 1487, J. Thomas.

SENIOR: 1823, Bennett; 7354, Brandish; 5099, Langman.

Finishers were drawn as follows:

LIGHTWEIGHT: 9710, Padley; 1117, Prentice; 9875, North.

JUNIOR: 1225, Lucas; 963, Woods.

SENIOR: 20, Olsson; 7391, Horsman; 7458, de la Hay; 3087, Clapham; 8490, Wood; 7894, Illingworth; 9476, A. H. Alexander.

A sum of over £200 was presented to the I.O.M. hospitals.

### The Magneto.

The ignition aparatus of the modern motor cycle requires so little attention that generally it is neglected altogether. An article on this subject appears on page 833.

### A Silent Warning.

Motor cyclists whose machines are innocent of adequate silencing arrangements would be well advised to avoid St. Albans at present. We are informed that the local police are displaying a certain activity in this direction and offenders if caught are not likely to escape unpunished for their sins.

### London-Edinburgh Souvenir Badges.

Many members of the Motor Cycling Club, who won gold medals for the first time this year in the London-Edinburgh run, would doubtless like to obtain one of the badges which are issued for fixing to machines. Members desiring souvenirs of this historical event should apply for particulars to Mr. W. H. Wells, Captain of the M.C.C., 366, Euston Road, London, N.W.1.

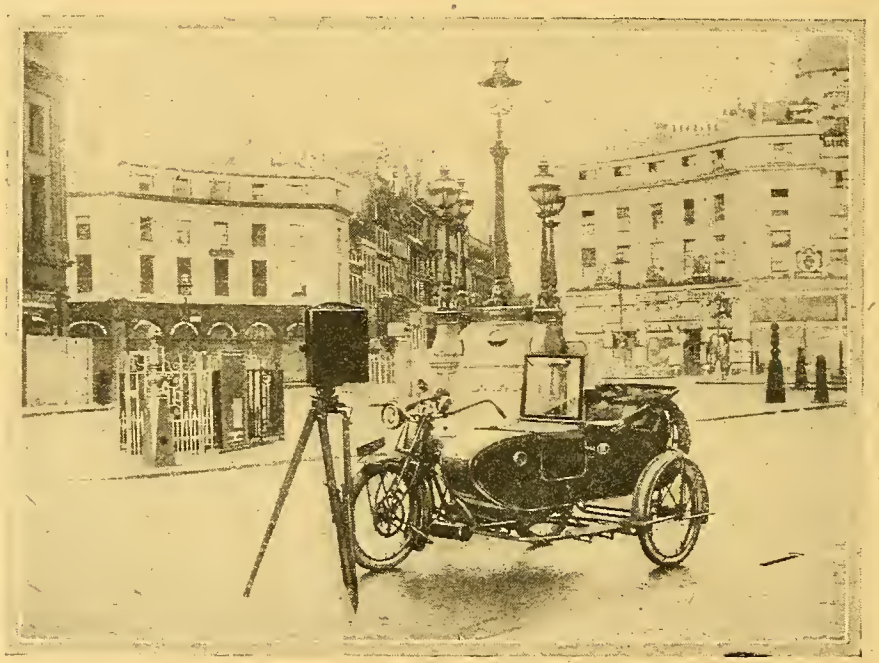
Number plates to be illuminated thirty minutes earlier, *vide* Road Vehicles Registration and Licensing Order (1921).

### 1922 Olympia.

The dates of the Cycle and Motor Cycle Show have been fixed for November 25th to December 2nd, both dates inclusive. The Show will therefore open on Saturday instead of on Monday, as has hitherto been the case. It has also been decided to make an alteration in the hours during which the exhibition will be open to the public, which will be from 10 a.m. to 9 p.m.

### French Appreciation.

Our contemporary *Mécano* in reviewing our 1001st number writes, "We have just received this number of our special (*sic*) English confrère, *The Motor Cycle*. This time it is more interesting than usual, and shows on its cover the 1001st number—that is to say, it is 1,000 weeks since our contemporary first appeared. One thousand weeks represents something like 20 years since this English journal first saw the light. Who would then believe that motor cycling would reach the present state of its development!"



Motor cyclists who are strangers to London and wish to see all the buildings and streets without danger and obstruction from traffic can do so in brilliant sunlight if they rise sufficiently early. The illustration shows the outfit owned by a cinema photographer, who has just filmed an early morning cinema "stunt" staged in a locality usually teeming with vehicles of every type.

A SUMMER NUMBER
OF
THE MOTOR CYCLE
WILL BE PUBLISHED ON
*Thursday, July 6th.*
Special articles and illustrations of an appropriate nature are in course of preparation for this enlarged issue.
**To prevent disappointment definite orders should be placed with Newsagents.**

### The Longest Day.

To-day the sun rises at 4.45 a.m. and sets at 9.18 summer time.

### The U.M.F. Grand Prix.

British competitors proceeding to the Grand Prix race at Strasbourg on July 12th will have their interests looked after on their journey by Mr. A. Mellano, who has already approached the A.C.U. for customs papers and other details.

### The Sidecar and the Stage.

The sidecar has at last appeared on the musical hall stage as a subject for burlesque. The Anartos are emulating Harry Tate's famous motoring sketch with a sidecar outfit of doubtful origin and efficiency.

### A Midland 24-Hours Trial.

The M.C. and A.C., always a live club, are organising a 24-hour trial from Birmingham to Holyhead and back, to take place on July 7th and 8th. Particulars will shortly be available from Mr. T. Blumfield, 52, Edgbaston Road, Birmingham.

### Recovered from Accident.

Both C. P. Wood and H. Langman, the Scott riders, who were involved in a taxi accident in the Isle of Man after the Senior T.T. have now recovered; Langman rode (against advice) in Saturday's Yorkshire Centre Open Trial, and was first in his class.

### A R.N.A.S. Reunion.

A Reunion Dinner for No. 8 Squadron, R.N.A.S. (Zanzibar) will be held to-morrow, June 23rd. All members of the R.N.A.S. who served in East Africa will be welcome. Communications to Mr. S. Thompson, 383, Wharncliffe Gardens, St. John's Wood, N.W.8.

### Handicapping Innovation for Brooklands.

At Brooklands, on July 15th, the chief feature of the B.M.C.R.C. race meeting will be a 100-miles race for which Mr. A. Mellano, of Hutchinson tyre fame, has presented as first prize a cup valne fifty pounds, or its full value in cash. He has suggested a novelty in handicapping, based on the 100 miles records. Each competitor will be credited with so many laps on the scoring board at the beginning of the race. No credit will be allowed to class E men (1,000 c.c.), and all riders will start together. The handicaps will therefore be by distance and not by time allowance, and interesting results are anticipated.

### Next Big International Event.

The French Grand Prix, which will be held at Strasbourg on Wednesday, July 12th, is the next big international event.

### Two Hours 1000 c.c. Record Broken.

Riding a 994 c.c. Trump-Anzani, Colonel R. N. Stewart succeeded in breaking the two hours' record at a speed of 78.85 m.p.h. at Brooklands. The weather was cold and threatened to rain with a strong north wind blowing. He intended to attempt the 2, 3, 4, and 5 hours' records, but owing to a unfortunate breakdown was unable to continue.

### The Belgian Grand Prix.

Already quite a good number of British machines have been entered for the Belgian Grand Prix to be held on July 23 next. Mr. Paul E. Kelecom, of the F.N. Company, of Liege, who attended the Tourist Trophy Races in the Isle of Man, sportingly approached one or two manufacturers with the object of inducing them to compete in the event, and his efforts met with success. The entry fees are 750 francs per machine, up to July 8 next.

### Silencer Prosecutions.

Four motor cyclists were fined £2 each at Bristol recently for, in the opinion of the Bench, creating undue noise and smoke by riding their machines without silencers. The constable, in evidence, said that one machine made a noise like "a rifle being fired down a drain-pipe."

Much discussion took place as to the standard by which noise could be judged; one defendant asked for a police guarantee of compliance with the law when the necessary additions had been made to the machine, but this was refused.

### Imports and Exports.

Importation of motor cycles showed an increase last month of over £8,591, the number of machines received being 194, valued at £10,508; accessories accounted for £6,663, a total of £17,171. Exports have not brightened up as we hoped they would. Certainly last month's figures are more than maintained, but compared with May, 1920, the value is down by half.

EXPORTS.

| | 1920 | 1921 | 1922 |
|---|---|---|---|
| Value of machines | £120,350 | £66,898 | £55,880 |
| Value of Accessories | £47,732 | £21,095 | £25,936 |
| Total | £168,082 | £87,993 | £81,816 |
| No. of machines | 1,599 | 864 | 855 |

### The Grand Prix.

Two of the T.T. winners, G. S. Davison (Levis), in the lightweight class, and A. Bennett (Sunbeam), in the senior class, have entered for the French Grand Prix. The second Sunbeam will be ridden by De La Hay, while one of the three Triumphs entered is to be ridden by F. G. Edmond, and one of the Nortons by W. Hollowell. Forty-two entries in all have been received, in which four nations are represented: England by Triumph, Sunbeam, Norton, Massey-Arran, New Imperial, Levis, and Velocette; France by Armor, Thomann, Moto Solo, Isoard, Liaudois, Yvels, Chauvière, Terrot, Alcyon, Peugeot, Griffon, and Koehler Escoffier; Switzerland by the Motosacoche; and Italy by three Garelli's, a very interesting type of two-stroke.

### Trial for Naval Officers.

Notice is given by the Royal Naval and Royal Marine Sports Control Board that entries for the Arbuthnot Trophy trial will close at noon on Friday, July 7th. The trial is open to any officer or midshipman in H.M. Navy, Naval Reserve, and Naval Volunteer Reserve, on the active list on the date on which entries close. Entrants must compete on solo motor bicycles which may be of any make or power, and must report at the trial headquarters at the Burford Bridge Hotel not later than noon on July 7th, with their motor cycles filled with petrol and oil, to be ready to start at 2 p.m. sharp. Such is the gist of a notice appearing in *The Times* under the heading "Naval and Military," which clearly shows that the Arbuthnot Trophy trial has the official recognition of the Admiralty. We sincerely hope, therefore, that commanding officers will grant the necessary leave to intending naval competitors who take part in this unique event.

### 500 Miles Motor Cycle Race.

The second five hundred miles motor cycle race to be promoted by the British Motor Cycle Racing Club at Brooklands Track, Weybridge, on Saturday, September 23rd, is already arousing much interest. There will be a race over five hundred miles for solo motor cycles in each of the five recognised classes, A, B, C, D, and E, all the contests being run together as one event of unique interest. Intending competitors are reminded that the number of entries is strictly limited to fifteen in each class, and that priority will be given to those who make application for entry first. Application should, therefore, be made at once to Mr. T. W. Loughborough, Hon. Secretary, British Motor Cycle Racing Club, 83, Pall Mall, London, S.W.1, a remittance of £6 6s. for each entry being forwarded.

The race is confined to members of the B.M.C.R.C., and others making application for entry should at the same time apply for membership of the Club.

SMALL CAR PROGRESSION

*"THE AUTOCAR"—published from the offices of "THE MOTOR CYCLE" and conducted on the same enterprising lines—is the complete automobile journal embracing small, medium, and large cars. Every motor cyclist contemplating the purchase of a light car should read*

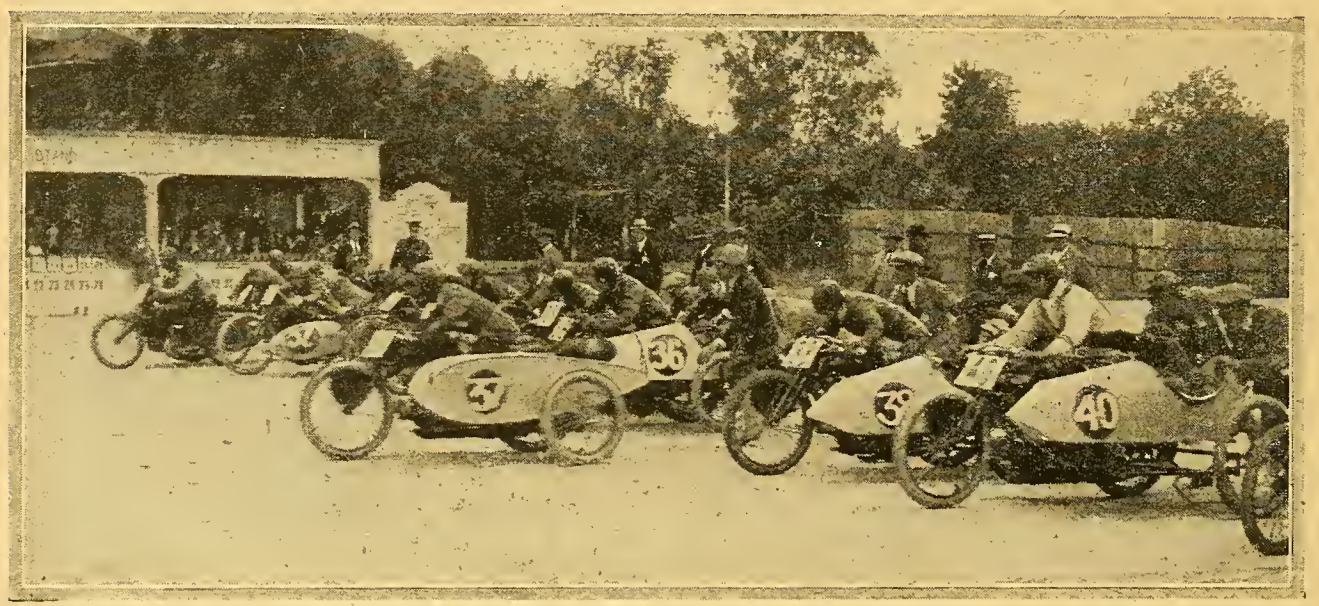
The Autocar

Every Friday **4d.**

*Founded in 1895, "THE AUTOCAR" is the largest and most successful automobile paper and enjoys the greatest circulation. It is universally accepted as the representative British motoring journal.*

# SIDECARS AT SPEED.

## Two Hundred Mile Sidecar Races at Brooklands; Many Records Broken at Ealing Club's Event.



Off! The big twins of the 1,000 c.c. class crossing the starting line.

FULL of incidents, though somewhat tedious to watch and difficult to follow, the two hundred miles sidecar races held by the Ealing and District Motor Cycle Club resulted in the beating of several records, though these were not ready for publication at the conclusion of the meeting. Particulars of these, however, will be found on the next page.

Cool, but not unpleasant, weather favoured the event, and suited the spectators admirably, though there was too much wind to please some of the competitors.

Pullin's 346 c.c. Douglas brought him records and a splendid victory by nearly half an hour in the 350 race; Bridgman's (499 Indian sc.) in the 600 c.c. race by over three-quarters of an hour was a brilliant success, but Le Vack's 998 Zenith-Jap sc.) brave fight against Davidson (998 Indian sc.) provided the most excitement of the whole meeting.

### Three Separate Events.

There were really three separate events in all, the 350 c.c. race (sidecars painted blue), the 600 c.c. race (sidecars painted red), and the 1,000 c.c. race (sidecars painted yellow). To give a coherent account of the proceedings each race must be treated by itself.

Beginning about 10 minutes after schedule time—noon—the race for the 350 c.c. cup attracted 15 starters. Several of the machines possessed interesting fitments, and all of every class had to be equipped with special skids so as to support the outfit in the event of the sidecar wheel coming off. Fortunately they were never needed, but the idea was a good one, all the same. The skid on Young's O.K. was equipped with a ball-bearing roller skate wheel. Most of the 350 c.c. competitors got off the mark smartly, but two of the Weatherells started late. That driven by Weatherell himself was delayed by the breakage of a brake pedal, but, notwithstanding, he is reported to have broken record. Tudor Thompson (346 Douglas sc.) rode instead of Holroyd. Thompson led easily for three laps, but a choked petrol pipe delayed him; then Pullin, who was similarly mounted, assumed the lead and kept it throughout the race, doing better and better as he proceeded. All the Weatherells suffered lubrication trouble, since their simple and ingenious constant-level float-feed system, though satisfactory for ordinary use, was not up to racing requirements. Early in the event the leaders were posted at the end of every ten laps, but later in the afternoon this posting of progress lagged behind somewhat.

### THE 200 MILE SIDECAR RACES IN BRIEF

#### THE WINNERS.

**For the "350" Cup.**

1. C. G. Pullin (346 Douglas sc.)—51.76 m.p.h.
2. L. F. Peaty (348 Hawker sc.)—46.32 m.p.h.
3. V. Baxter (549 Holroyd-Jap sc.)—43.73 m.p.h

**For the "600" Cup.**

1. E. A. Bridgman (499 Indian sc.)—53.92 m.p.h.
2. V. E. Horsman (596 Norton sc.)—44.42 m.p.h.
3. F. E. Jones (498 Ariel sc.)—38.02 m.p.h.

**For the "1,000" Cup..**

1. D. H. Davidson (998 Indian sc.)—65.44 m.p.h.
2. H. Le Vack (998 Zenith-Jap sc.)—64.88 m.p.h.
3. T. R. Allchin (989 Harley-D. sc.)—60.64 m.p.h.

### After Ten Laps.

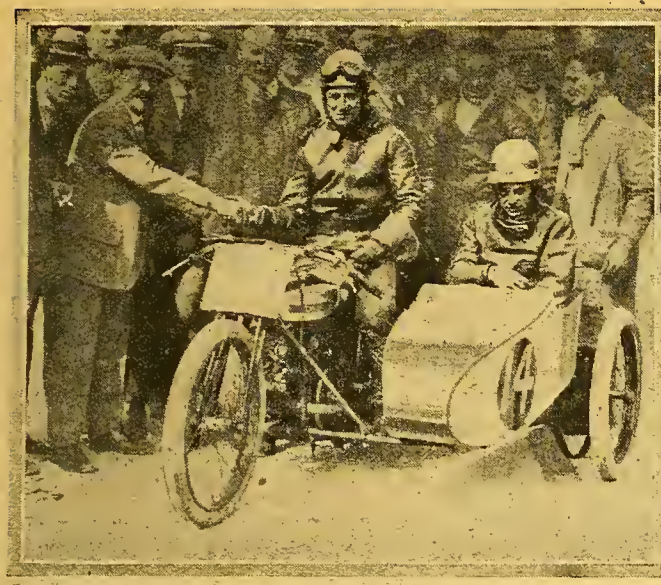
When ten laps had been completed the leaders were: Pullin (Douglas sc.), Youngs (O.K. sc.), and Peaty (Hawker sc.). By the time (1-10 p.m.) that the 600 c.c. machines were started [illegible] had accomplished 20 laps, Youngs 19, and Peaty 18, and at 20 laps also the three leaders' positions had not altered.

There were naturally plenty of incidents. Dequin (Ivy sc.) broke the bottom of the saddle tube of his frame just above the bottom bracket on his 14th lap. Weatherell retired with a seized piston on his 8th lap. In his 49th lap Prestwich (Jap engined Coventry Eagle sc.) was delayed by a broken chain, and King Smith (Morris sc.), after 30 laps, experienced a broken gudgeon pin.

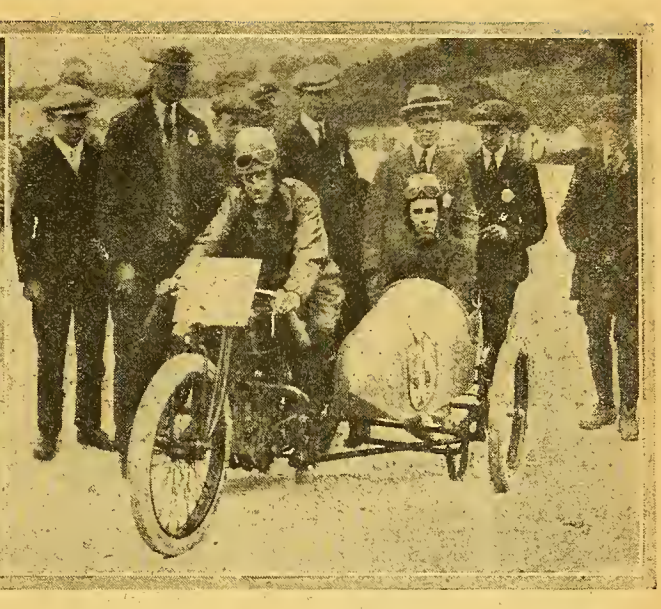
### Half-way.

At practically half distance Pullin was not only leading, but bettering his position, and was four laps ahead of Peaty, while Baxter (Holroyd-J.A.P.) held third place. Thereafter their positions never altered.

When the leaders in the 40th lap were posted, Pullin had covered 58



C. G. Pullin (346 c.c. Douglas), winner of the "Three-Fifty Cup" at a speed of 51·76 m.p.h.



D. H. Davidson, who won the "Thousand Cup" on his 998 c.c. Indian at 65·44 m.p.h.

laps. By the time Pullin had completed 70 laps, Peaty had done 63, and Baxter 61, the leader of the 600 c.c. race had finished 57, and the leader of the 1,000 c.c. race 43.

Just after 4 p.m. Pullin crossed the finishing line.

| | | |
|---|---|---|
| C. G. Pullin (350 Douglas sc.) | 3h. 53m. | 10⅕s. |
| L. F. Peaty (346 Hawker sc.) | 4h. 20m. | 29⅘s. |
| V. Baxter (349 Holroyd-Jap sc.) | 4h. 35m. | 22s. |
| J. V. Prestwich (349 Coventry-Eagle sc.) | 4h. 56m. | 58s. |
| S. T. Glanfield (348 Morris sc.) | 5h. 23m. | 49s. |
| H. Jeluke (348 Weatherell sc.) | 5h. 39m. | 46s. |
| A. King Smith (348 Morris sc.) | 6h. 15m. | 9s. |
| Tudor Thompson (350 Douglas sc.) | 37 laps. | |
| P. C. C. Passmore (348 Weatherell sc.) | 26 | ,, |
| H. H. Robinson (349 Wooler sc.) | 21 | ,, |
| R. Deguin (348 Ivy sc.) | 14 | ,, |
| R. Weatherell (348 Weatherell sc.) | 12 | ,, |
| S. M. Greening (349 Francis-Barnett sc.) | 9 | ,, |

* Outside time limit.

At the end of the race Pullin referred to his ride as "a comfortable half-throttle job." He was troubled by the slower riders who "rode well on the 50ft. line," and said it was curious how the speed varied according to slight changes in the wind direction, though the throttle was set in one position and never altered. In one lap his passenger sat up in the sidecar and it made a difference of 3 m.p.h. Peaty, who made an absolute non-stop run, had an auxiliary tank behind the sidecar and a hand pump for the pressure feed, complete with gauge. Prestwich, who finished fourth, had a flat sidecar tyre in his 50th lap, repaired it, and continued.

### The 600 c.c. Sidecars.

When the time came for the 600 c.c. sidecar outfits to line up for the start, Col. R. N. Stewart stationed himself on the track with a yellow flag so as to keep the juniors clear of their larger *confrères*.

In this class there were only seven starters, but some first-class riders were among them. Bridgman was mounted on a single-cylinder T.T. Indian, and of course his red sidecar matched the natural colour of his mount. Harwood's Hazlewood J.A.P. had two carburetters, while the Norton riders were all first-class men. Maintaining the same delay as on the occasion of the "350" men, the larger machines left at 1.10 p.m., all getting away well except Bridgman, and at the end of lap one O'Donovan was leading, followed by Horsman, Emerson, and Tucker,

### RECORDS MADE DURING THE RACES.

**350cc. Class B/S.**

50 miles.—C. G. Pullin (346 Douglas sc.), 55m. 45.36s. = 53.81 m.p.h.

100 Miles.—C. G. Pullin (346 Douglas sc.), 1h. 54m. 56.52s. = 52.20 m.p.h.

200 Miles.—C. G. Pullin (346 Douglas sc.), 3h. 51m. 51.39s. = 51.76 m.p.h.

1 Hour.—C. G. Pullin (346 Douglas sc.), 53 miles 1,378 yards = 53.78 m.p.h.

2 Hours.—C. G. Pullin (346 Douglas sc.), 104 miles 665 yards = 52.19 m.p.h.

3 Hours.—C. G. Pullin (346 Douglas sc.), 156 miles 1,239 yards = 52.23 m.p.h.

4 Hours.—C. G. Pullin (346 Douglas sc.), 201 miles 189 yards = 50.28 m.p.h.

5 Hours.—C. G. Pullin (346 Douglas sc.), 201 miles 189 yards = 40.22 m.p.h.

**600cc. Class F.**

100 Miles.—V. E. Horsman (596 Norton sc.), 1h. 44m. 5.20s. = 57.64 m.p.h.

200 Miles.—G. H. Tucker (588 Norton sc.), 3h. 40m. 9.86s. = 54.50 m.p.h.

2 Hours.—G. H. Tucker (588 Norton sc.), 114 miles 511 yards = 57.14 m.p.h.

3 Hours.—G. H. Tucker (588 Norton sc.), 166 miles 1,683 yards = 55.65 m.p.h.

**1,000c.c Class G.**

200 Miles.—H. Le Vack (998 Zenith-Jap sc.), 3h. 5m. 4.70s. = 64.84 m.p.h.

2 Hours.—H. Le Vack (998 Zenith-Jap sc.), 134 miles 465 yards = 67.13 m.p.h.

3 Hours.—H. Le Vack (998 Zenith-Jap sc.), 193 miles 1,060 yards = 64.53 m.p.h.

*The following distances and times were made by D. H. Davidson, but may not be passed as records as the tyre on the sidecar was smaller than allowed under F.I.C.M. Rules:—*

200 Miles.—D. H. Davidson (998 Indian sc.), 3h. 3m. 21.78s. = 65 miles 44 yards m.p.h.

3 Hours.—D. H. Davidson (998 Indian sc.), 196 miles 259 yards = 65 miles 38 yards m.p.h.

but in the early stages the race resolved itself in a duel for first place between Horsman (Norton sc.) and Emerson (Douglas sc.), but at the 10th lap the leaders were Horsman (Norton sc.), Emerson (Douglas sc.), and Tucker (Norton sc.).

Then misfortune overtook Emerson, as, somewhere about his 15th lap, a stripped gear pinion caused his retirement. Harwood had also experienced bad luck and withdrew with a burnt-out plug and a slipping clutch. O'Donovan also retired, but by the 20th lap Horsman was leading and Tucker second, while Bridgman's consistent running had brought him up to third place. By the time thirty laps had been accomplished the order remained unchanged. At forty laps Tucker took the lead, with Horsman second and Bridgman third. A broken inlet valve then caused Horsman delay, and only four men were left in the running. Tucker was easily ahead, but as he changed a wheel with assistance away from his depot he was disqualified, but later raised a protest. Result:—

| | | |
|---|---|---|
| E. A. Bridgman (499 Indian sc.) | 3h. 43m. | 47⅗s. |
| V. Horsman (596 Norton sc.) | 4h. 31m. | 41⅖s. |
| F. E. Jones (498 Ariel sc.) | 5h. 17m. | 20⅖s. |
| J. Emerson (499 Douglas sc.) | 16 laps. | |
| D. R. O'Donovan (588 Norton sc.) | 15 | ,, |
| J. E. G. Harwood (498 Hazlewood-Jap sc.) | 3 | ,, |

### The 1,000 c.c. Machines.

By far the most exciting race was that started at 2.10 p.m. between the 1,000 c.c. sidecar outfits. Eleven starters lined up before the timekeeper. Packman's Packman-Jap used a double induction pipe (in one casting) leading to two carburetters, and perhaps the greatest novelty was Dixon's Harley-Davidson, the sidecar wheel of which was driven by chain off a sprocket attached to a shaft running underneath the sidecar chassis and driven direct off the countershaft. Le Vack was using a Schebler carburetter on his Zenith-Jap sidecar.

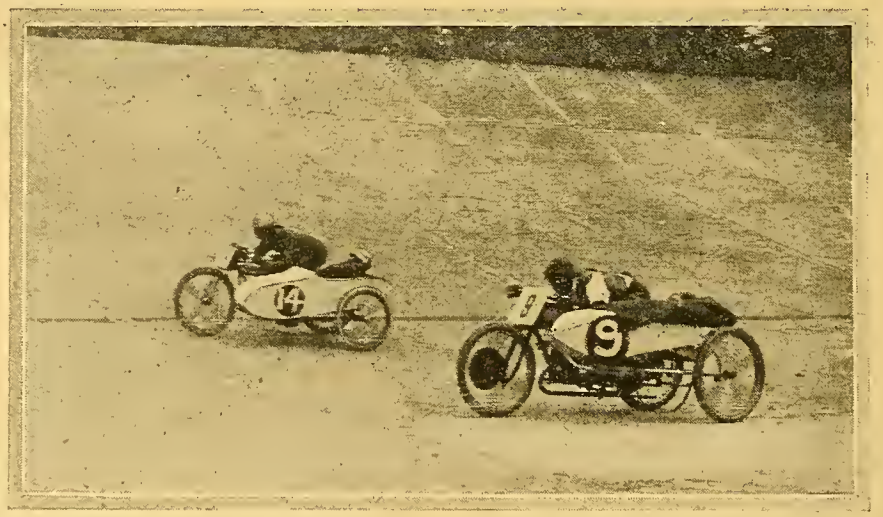
An excellent start was made, but Kaye

A. G. Fenn (739 c.c. Martinsyde) (31), Kaye Don (998 c.c Zenith J.A.P.) (38), T. R. Allchin (989 c.c. Harley-Davidson) (34), followed by C. G. Pullin (346 c.c. Douglas) (14). These two photographs were taken within two or three seconds of each other, and show how the riders' positions changed.

Don rolled in at the end of his first lap with his rear tyre deflated. Fenn (Martinsyde sc.) stopped early in the race. At the end of the tenth lap, Le Vack, travelling at high speed, was leading easily, Davidson (Indian sc.) was second and Allchin (Harley-D. sc.) third, but at thirty laps, though the first and second positions were unaltered, Dixon (Harley-D. sc.) occupied third place. Meanwhile, Longman (Zenith-Jap sc.) was held up by plug trouble, and a piece of the plug entered the cylinder. By the time forty laps had been covered, the order of the leaders remained the same. Temple (Harley-D. sc.) stopped and replaced his petrol pipe, and at forty-four laps Le Vack paid a call at his depot and hurriedly changed a rear wheel, and Allchin (Harley-D. sc.) was delayed by clutch trouble.

When about fifty-five laps had been covered the excitement became intense. Le Vack's tyre trouble and the fact that he had been delayed far away round the track gave Davidson a three-lap lead. Le Vack got going again, and travelling well (he had clearly the faster machine), struggled hard to regain the lead, but tyre trouble again pulled him up in his 67th lap. Once on the track again, he renewed his desperate efforts, and once more began to overhaul his rival, but the time was too short; passing him at the 71st lap, Le Vack was still a lap behind, and finished second, 1 min. 38 sec. behind the winner, who carried off a second Indian victory (if Tucker's protest is not allowed). Result:—

| | | |
|---|---|---|
| D. H. Davidson (998 Indian sc.) | 3h. 4m. | 20s. |
| H. Le Vack (998 Zenith-Jap sc.) | 3h. 5m. | 58s. |
| T. R. Allchin (989 Harley-D. sc.) | 3h. 18m. | 55s. |
| R. Charlesworth (998 Zenith-Jap sc.) | 3h. 37m. | 6s. |
| C. F. Temple (989 Harley-D. sc.) | 3h. 44m. | 15s. |
| Kaye Don (998 Zenith-Jap sc.) | 4h. 7m. | 31⅕s |
| A. G. Fenn (739 Martinsyde sc.) | 52 laps. | |
| G. Packman (998 Packman-Jap sc.) | 41 | ,, |
| S. E. Longman (998 Zenith-Jap sc.) | 30 | ,, |
| F. A. Longman (994 Ariel sc.) | 26 | ,, |
| F. W. Dixon (989 Harley sc.) | 23 | ,, |



A duel between C. G. Pullin (346 c.c. Douglas) and H. H. Robinson on a 349 c.c. Wooler. The former won.

## HOW THE CRASH HELMET ORIGINATED.

EARLY in 1914 Dr. Eric Gardner, Medical Officer for Brooklands track, noticed in his case book that about every fortnight he had a hospital case of a motor cyclist who had fallen on the track and received injury to the head. If the rider was travelling at 60 miles an hour or over he was usually practically unhurt, but if going at only 45 m.p.h. serious bodily damage usually resulted.

After some thought Dr. Gardner came to the conclusion that at the higher speeds a man who crashed was projected forward and struck the ground with a glancing blow, and not directly, as happened at the slower speeds. Having witnessed a man part company with his machine through fork breakage while passing under the bridge leading to the track, Dr. Gardner thought of the helmet idea, and got Mr. Moss, of Bethnal Green, to construct a canvas and shellac helmet devoid of all projections, stiff enough to stand a heavy blow, and smooth enough to glance off any object against which it came in contact. When the design was first submitted to the A.C.U. it was universally condemned, and when the A.C.U. became converted violent opposition was encountered from the riders.

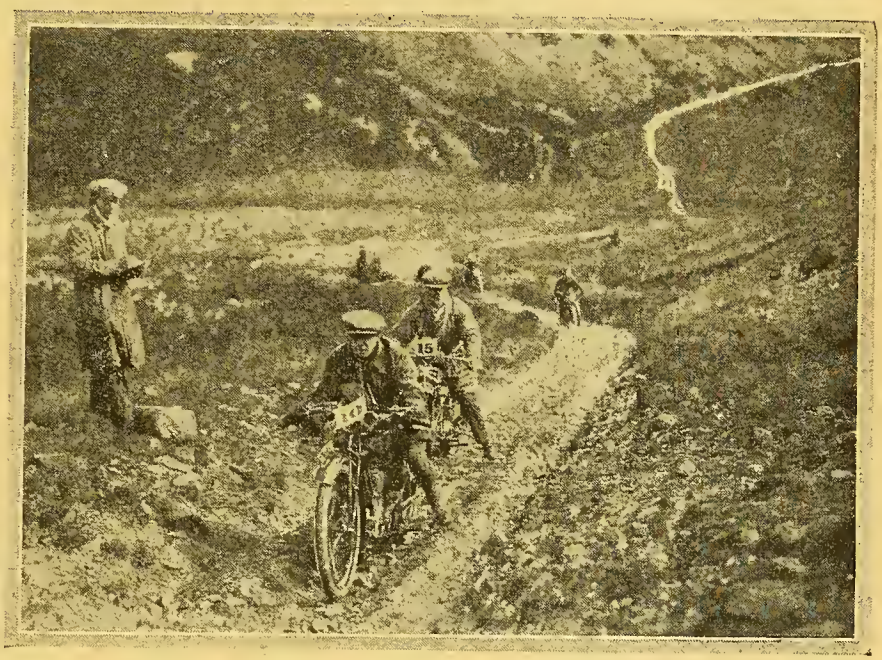
Nevertheless, Col. Lloyd took 94 of these helmets with him to the Isle of Man. One rider who hit a gate struck it a glancing blow and, thanks to the helmet, was uninjured. Later, Dr. Gardner received a letter from one of the principal medical officers in the Isle of Man asking why, when after the T.T. races their hospitals had always "several interesting concussion cases," there was now none. All credit must therefore be given to Dr. Eric Gardner for an innovation which has not only rendered motor cycle racing a comparatively safe sport, but has saved countless riders from serious injury.

# "ROUGH HEART-BREAKING STUFF."

## Yorkshire Centre (A.C.U.) Colonial Trial. Two Grueliing Circuits of a 70 Miles Course.

ACCORDING to "Ye Booke of Ye Great Colonial Trialle on ye Seventeenth Day of ye month of June in ye yeare of Grace 1922 A.D.," otherwise the programme of last Saturday's open one-day event in Yorkshire, the competition was termed a Colonial Trial.

The term so used was explained by the following note: "Portions of the course will be over rough, though perfectly rideable, ground, and the conditions, so far as possible, will be such as a motor cyclist would expect to meet in some of the colonies"—looking back on the trial we are inclined to agree that no one would expect much worse.

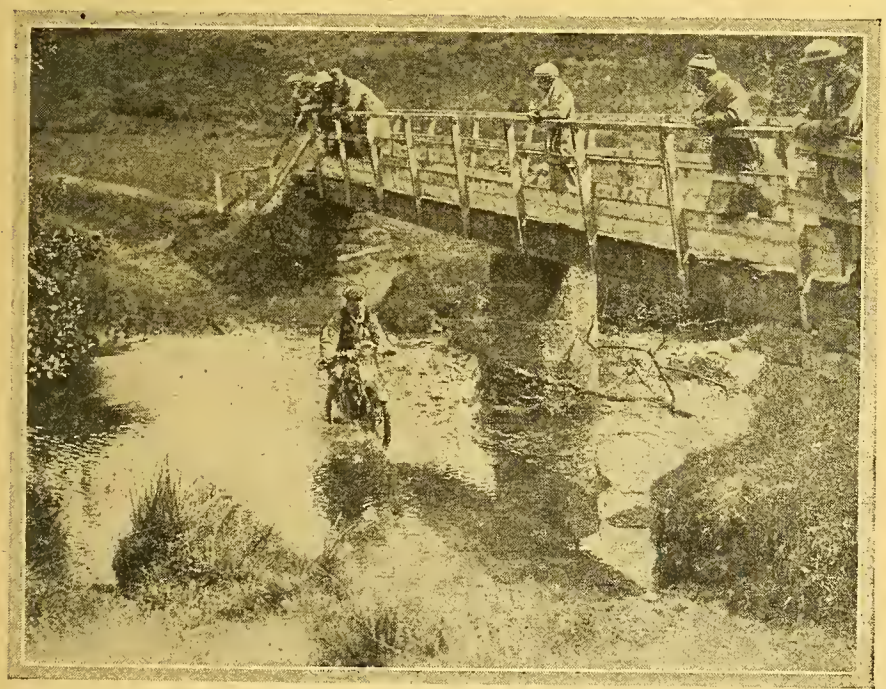


It was this type of surface which made the trial so difficult. C. Dodson (349 c.c. Royal Ruby) and A. Bowie (349 c.c. Wooler) on the disused track to the lead mines near Greenhow.

### Two Circuits over Same Course.

Harrogate was the starting, lunch, and finishing point of the trial, and the course embraced some of the lesser-known roads in Wharfedale and Nidderdale. No freak gradients were included; surface, or lack of it, described some time ago by one of the route-finders as rough, heart-breaking stuff, being relied upon for elimination purposes on a system of marking based on observation of riding ability and machine performance; the observer at each of the twenty-five selected points awarding marks from 0 to 5 on the spot.

From Harrogate the route led circuitously over lanes and grass tracks, with some decent going to Pately Bridge, where a sharp turn, almost a hairpin, in the cobbled main street led to a lane up Brownstay Ridge, a northern flank of the Nidd Valley. Up and down again to the river's level involved about three miles of farm tracks, minor watersplashes, and grassy hairpins, as a foretaste of what was to follow.

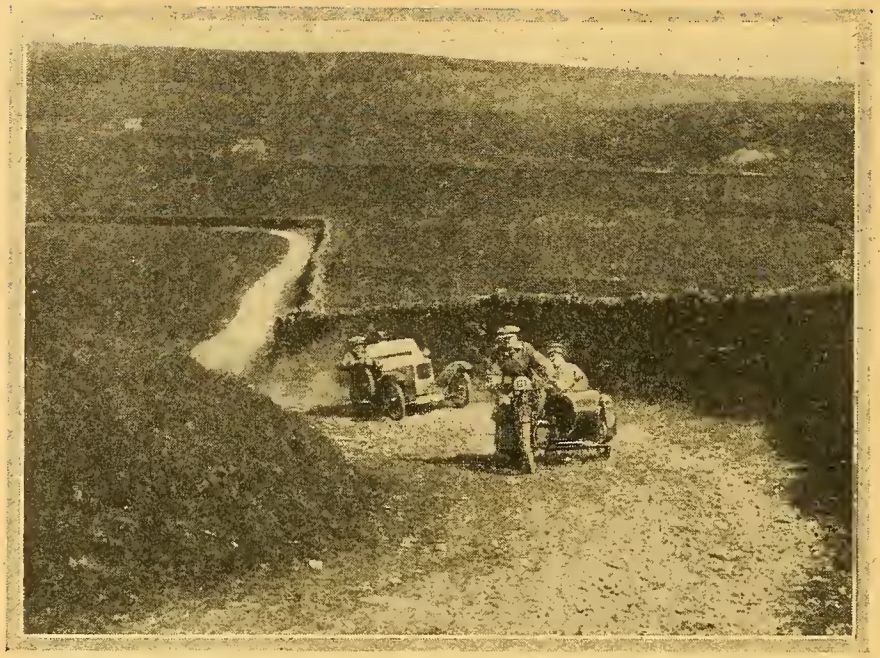


In the River Washburn, at Mogington Bridge, on the West Yorkshire Moors. The rider is S. Lawrence (499 c.c. Sunbeam). This was only one of the many watersplashes in the Yorkshire Centre Trial.

Re-entering Pateley Bridge the famous Greenhow Hill was attacked, but only the lower section was climbed before the route switched to the right along the edge of a valley carved in the moors by a mountain stream. Having climbed some 500 ft., crossing the stream meanwhile, the competitors, rounding a bluff, came to a grassy and rutted descent into a veritable valley of desolation—no vegetation, rocks and stones innumerable, and the ruins of a lead mine, crumbling with fifty years of decay. Here was the most terrible bit of track in the trial. The route recrossed the stream by a thickly boulder-strewn ford, from which the forgotten track wound upwards in gentle curves over fearsome lumps of rock. Few would have thought a clean passage was possible to a solo rider, yet Bert Kershaw (250 New Imperial), P. L. Mayo (348 Coventry Eagle), J. Whalley (348 Massey Arran), and J. A. Watson-Bourne (976 Brough Superior) all made astoundingly clean performances at this point; if any distinction can be made Kershaw and Watson-Bourne were the best, the former all concentration on the business in hand, the latter cheerful as ever, with time for a side glance and a greeting to an acquaintance by the wayside.

### Speed on Freak Surfaces.

Only slightly less outstanding were J. A. Newman (496 Douglas), W. Backhouse (499 Triumph), C. W. Ward (499 Triumph), J. T. Bashall (688 Martinsyde), and J. H. Holmes, W. Clough,



G. C. Booth (598 c c. Beardmore-Precision sidecar) followed by W. Ridley ( 1098 c.c. New Hudson) on the ascent to the Hardcastle control.

and C. B. Haigh (532 Scotts). J. S. Duxbury (532 Scott) was exceptionally fast, but after a valiant effort to keep his feet off the ground at last had to touch. Very little baulking occurred, but on one occasion seven competitors came in a string, led by Mrs. Janson, now mounted on a 211 c.c. Levis. This lady stopped, and had great difficulty in moving her mount from the course; thus several were baulked.

Out of 66 starters, 47 rode solo mounts, for although two tracks gave stability, the possibility of surviving the course on a passenger machine seemed somewhat remote. On the above described section the sidecars naturally had some fearful buffeting, but with one exception appeared to be surviving well. The three-wheelers (there were five) did not appear to be quite so happy—two were giving signals of engine distress.

### Down the Valley Again.

Thereafter the competitors might have expected some respite—but no! Down the valley again by a hill used in former Scott trials, then up again, parallel to it, by a tolerably smooth but steep ascent to the moorland plateau once more, then a glorious "blind" *viâ* Greenhow village (1,400 ft. altitude), down to Skyreholme, near Appletreewick in Wharfedale. Then up the disused grass track over Pock Stones Moor, all on old Scott trials route again, through a deep watersplash at Hey Slack, another at Bramley Head, and another shallow one at Mogington Bridge.

Of these three, that at Mogington was reported to be worst, but Kershaw (249 New Imperial), J. Whalley (348 Massey Arran), H. Gibson (349 Raleigh), H. S. Moorhouse (499 Triumph), E. L. Boston (486 Scott), S. Laurence (499 Sunbeam), W. Brandish (700 Humber), and J. M. Younie (688 Martinsyde), treated it with indifference.

Quite outstanding amongst the solo men, however, were P. L. Mayo (248 Coventry Eagle), H. Langman (486 Scott), and Watson Bourne (976 Brough Superior). The other Brough Superiors were not nearly so dexterously handled. A. K. Fitton, on this make, floundered and then broke a chain, while A. Greenwood, his team mate, charged into the water at speed, only to scramble out at the other side. T. A. R. Arthurs (550 Triumph) experienced bad luck, for his exhaust pipe fell away from the cylinder.

Generally speaking, the sidecars were better than the soloists, and some good driving was exhibited. This remark cannot be passed on the methods of some of the three-wheeler drivers. W. A. Carr (1098 Morgan), and W. Ridley (1098 New Hudson) negotiated the crossing skilfully, but the others were far too dashing.

After this point no severe obstacle was encountered until Harrogate was reached again, but the surfaces, the countless humps, bumps, and corners, all contributed to the difficulties of maintaining a satisfactory average speed.

### The Same Dose Repeated.

Somewhat refreshed by the excellent provision made for everyone's comfort during the luncheon hour in Harrogate, the survivors, numbering about forty-five, embarked again on their second circuit. Footrests were dangling or pointing to one-fifty o'clock, lamps were battered, mudguard stays broken, and silencers loose, but the hardy crowd went on.

The afternoon's run was a repetition of the morning's trip, except for a timed hill climb, but some of those not previously familiar with the type of road traversed had learnt a lesson or two. Others were so tired of holding the dithering and plunging handlebars that they fell off where they had previously excelled.

Although on the first circuit the ford at Mogington Bridge was deemed worst, on the second round the Bramley Head splash was considered to be the real test of seamanship; and most of the soloists had difficulty therein—one even laying down altogether. Amongst the sidecars, the two P. and M.'s driven by G. M. Townsend and R. Lewis, distinguished themselves—the high engine and magneto position favouring them. E. C. Gifford's Martinsyde sidecar was also good, and H. S. Perry's 770 c.c. B.S.A. twin was undoubtedly the healthiest sounding sidecar machine in the trial.

As in the morning's circuit, the weather remained fine throughout, and except near the water-splashes, roughness of surface was the only real obstacle to time-keeping; at the splashes, of course, considerable wheel spin was experienced.

Naturally there were many incidents and difficulties. G. E. Jackson and G. C. Booth (598 Beardmore-Precision sidecars) had both dropped out with tyre troubles; W. E. Grange (750 Bradbury sc.) had damaged his gearbox by slamming in low as a brake; R. Horsley (633 Norton) had a gear box ball race go; Hugh Gibson (348 Raleigh) was gamely riding with one hand on the petrol tap owing to a punctured float; B. L. Bird (537 B.S.A. sc.) kept going, and well at that, despite a broken inlet spring, and C. B. Haigh (532 Scott) was sticking on to a broken saddle.

Everything concluded satisfactorily. The results were announced the same evening, and beyond a few minor grumblings as to the arrowing, which for the most part were raised on small grounds, the trial was most enjoyable, although more than an ordinarily strenuous day's riding had been done, again to quote the programme, between "eight of ye morne to setting of sun."

Results:—

(Maximum marks, by observation, 250; by final examination, 10; total, 260.)

Premier Awards of equal value were given in each class, with second and third prizes as mentioned.

CLASS A.—SOLO UP TO 250 c.c.

| | Marks. |
|---|---|
| 1. B. Kershaw (248 New Imperial) ... | 244 |
| 2. P. L. Mayo (248 Coventry-Eagle) ... | 208 |

CLASS B.—SOLO UP TO 350 c.c.

| | |
|---|---|
| 1. J. Whalley (348 Massey-Arran) ... | 244 |
| 2. H. Gibson (348 Raleigh) ... ... | 226 |
| 3. C. F. Nott (348 Raleigh) ... ... | 220 |

CLASS C.—SOLO UP TO 500 c.c.

| | |
|---|---|
| 1. H. Langman (486 Scott) ... ... | 253 |
| 2. H. S. Moorhouse (499 Triumph) ... | 247 |
| 3. W. Westwood (499 Triumph) ... ... | 245 |

CLASS D.—SOLO UP TO 750 c.c.

| | |
|---|---|
| 1. C. B. Haigh (532 Scott) ... ... | 253 |
| 2. W. Moore (532 Scott) ... ... ... | 250 |
| 3. G. S. Boston (532 Scott) ... ... | 249 |

(NOTE.—J. T. Bashall (688 Martinsyde) also secured 249 marks, but was slower in timed hill climb.)

CLASS E.—SOLO, UNLIMITED.

| | |
|---|---|
| 1. J. A. Watson-Bourne (976 Brough-Superior) ... ... ... | 235 |

CLASS G.—SIDECARS UP TO 500 c.c.

| | |
|---|---|
| 1. P. Pehrson (499 Dunelt sc.) ... ... | 195 |

CLASS H.—SIDECARS UP TO 750 c.c.

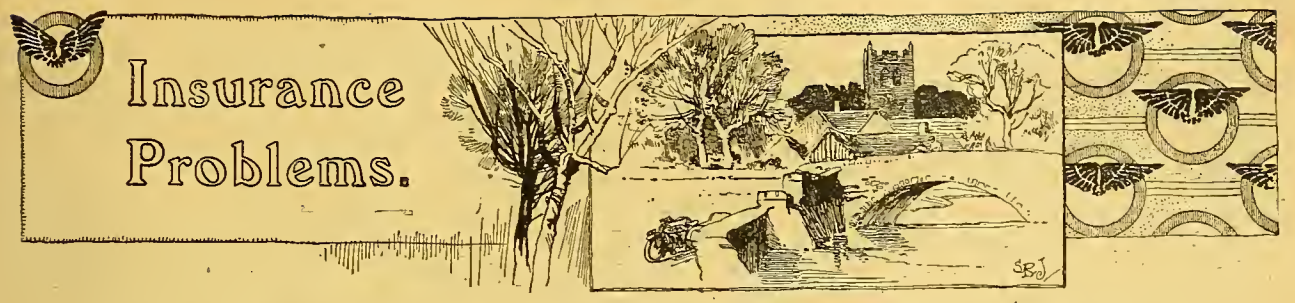
| | |
|---|---|
| 1. B. L. Bird (557 B.S.A. sc.) ... ... | 250 |
| 2. G. M. Towsend (555 P. and M. sc.) ... | 248 |
| 3. E. C. Gifford (688 Martinsyde sc.) ... | 231 |

CLASS I.—SIDECARS, UNLIMITED.

| | |
|---|---|
| 1. A. R. Stacey (989 Harley-Davidson sc.) | 255 |

CLASS J.—THREE-WHEELERS.

| | |
|---|---|
| 1. W. Ridley (1098 New Hudson) ... ... | 191 |



## A New Feature in which Insurance Questions are Answered and Discussed.

NONE but the rich can afford to run an uninsured motor cycle; none but the heedless and careless ever do so. The benefits and contentment of mind obtained by covering a machine by insurance are undeniable. That the necessity of insurance is recognised by the average motor cyclist is shown by the number of letters and queries we receive on the subject. Some of these questions are knotty ones requiring expert advice, and in this new feature it is proposed to deal impartially with the various problems our readers are so frequently presenting to us.

No good purpose can be served by recalling the calamitous passing of big insurance bodies recently, or of dwelling on the parlous state of several existing organisations except that they throw into strong relief the reputable organisations who are seeking patronage of motor cyclists to-day. These companies stand on solid foundations and reflect the greatest credit on British Insurance, which stands to-day in the premier position amongst insurance organisation of the world.

When motoring insurance was in its infancy, our sister journal *The Autocar* perceived a great need for motorists and founded The Autocar Insurance Department, the main object being that the motor vehicle insurer should have amongst other things unquestioned security, due and prompt recognition of the motorist's point of view, and equitable premium basis, prompt claim settlements, and all those things which the insurer is entitled to expect. From that company grew the Autocar Fire and Accident Insurance Co., from which office is issued *The Motor Cycle* Insurance policy.

As previously stated, we propose to assist readers wherever possible on any insurance matters, and problems needing elucidation will be dealt with promptly and impartially, and if of general interest discussed in these columns. Enquiries will be welcomed and should be marked "Insurance" on the left-hand corner of the envelope and addressed to *The Motor Cycle*, Dorset House, Tudor Street, London, E.C.4.

**Deducting for Depreciation.** Assessment of the value of a stolen motor cycle is a point of greatest interest. Mr. J. A. Coulder, Nottingham, wants to know if a machine be stolen three months after purchase (the original cost being £155), whether the full insured value is claimable from the insurance company, or may depreciation be deducted.

The fundamental principle governing all insurance transactions is, that the policy of insurance is a policy of indemnity and not of profit.

A motor cycle, purchased new to-day, and lost or destroyed after three months' usage, cannot possibly be of the value at the time of loss which it was at the time of insurance. It is the usual practice to settle total losses arising from any cause covered under the terms of an insurance policy on the basis of market value at the time of loss.

A reputable office would look upon a loss occurring after three months of insurance, in the case of a brand new machine, on the basis of very little and probably no depreciation having taken place at all. Should it be the case that the particular machine lost had been reduced in price for the new model, by the makers, then this is a consideration which must govern the settlement.

* * * *

**Who has the Last Word?** Like many others Mr. C. W. Clarke, Hampstead, wonders what constitutes "Reasonable precaution against theft," and he wishes to know, too, who has the last word in this matter. Pertinent questions not briefly answered.

"Reasonable precaution" is very difficult to define in actual set terms, but in practice, it presents very little difficulty indeed. Reasonable precaution, as the term is used in connection with insurance matters, is whether an insured person has looked after his property in such a manner as he would undoubtedly do were that property not insured.

Cases have happened, within our own experience, where machines have been left outside offices in public thoroughfares in London from 10.30 a.m. until 2.30 p.m. and no care at all exercised, either in padlocking or otherwise, to see that the machine was not criminally removed.

In no case has The Autocar Insurance Co. repudiated liability, however extreme the conditions attaching to a claim of this nature may have been, but in one or two cases the insured has had to bear some small portion of the loss where it was considered that there was grave negligence.

It must be remembered that the majority of insurance companies in transacting motor insurance have their big reputations to maintain, and it would obviously be inimical to their interests were they to adopt an attitude which could not be strictly maintained in a Court of Arbitration or other court.

As to "Who has the last word in this matter" the answer is undoubtedly the insured.

* * * *

**A Boundary Hit and Broken Spokes.** The following interesting query to hand as we go to press raises a point on which readers may speculate during the week. An answer will be given next Thursday.

A party of motor cyclists recently stopped to see a cricket match in a village, writes "Sportsman." One of the batsmen sent a hard, fast drive, which hit one of the machines and smashed several spokes. The question arose amongst us as to whether the insurance company should make good the damage. It was no fault of the batsman or of the motor cyclist, as the machine had been placed in what appeared to be a perfectly secure position. The machine does not appear to be covered, unless by the clause in the policy which says "accidental damage whilst on the road under ordinary riding conditions." It was an unlucky accident, and it certainly does raise a nice point, namely, who has to pay?

# Club News

In addition to the usual items at the motor cyclists' gymkhana at Exeter, acceleration and speed tests took place. R. Clark all out on his 633 c.c. Norton sidecar.

## Week-End Club Events.

### Barrow and District M.C.

Following are the formula results in each class of a hill-climb held at Buckman Brow by the Club: A.—1, B. Parkinson (Diamond); 2, B. Turner (Velocette). B.—1, B. Parkinson (Diamond); 2, J. C. Dearden (Massey-Arran); C.—1, B. Parkinson (Diamond); 2, B. Hill (Scott). D.—1, B. Parkinson (Diamond); 2, J. C. Dearden (Massey-Arran). E.—1, B. Parkinson (Diamond); 2, H. Jackson (Sunbeam). F.—1, J. C. Dearden (Norton). G.—1, J. C. Dearden (Norton); 2, D. Chanaing (Sunbeam). I.—1, H. Jackson (Sunbeam); 2, G. Roberts (Norton). K.—1, H. Jackson (Sunbeam).

### Sheffield and Hallamshire M.C. & L.C.C

A twenty-four hours' reliability trial was held at Whitsun, from Sheffield to Barmouth and back, starting on Sunday evening at 8 p.m. Awards as follows: Gold medals, H. Beeden (499 Sunbeam), C. E. Turner (688 Martinsyde), J. Carter (1,098 T.B.), J. Younie (688 Martinsyde), G. W. Wilkin (9.5 Deemster), A. Flint (348 Ivy), C. Hollister (348 Ivy), J. Wildblood (688 Martinsyde sc.), R. May (10.5 A.B.C.), C. W. Ward (499 Triumph). Silver medals: R. Stacey (993 Matchless sc.), B. Jepson (598 Harley-Davidson), R. Denby (9.5 Deemster). On the homeward run, failure to climb Bwlch-y-Groes Hill resulted in the loss of a gold medal.

### Nottingham and District M.C. and L.C.C.

The team representing this club in the M.C.C. Team Trial is composed of resident members of the Nottingham Club, and all the machines being used have been manufactured in Nottingham.

### T.T. SPEEDS IN ITALY.

Averaging slightly more than 59 m.p.h. over a distance of 134 miles, A. Marcoli recently won the Circuito Internationale, Padova, Italy, on his 499 c.c. o.h.v. Triumph. Incidentally he beat the 1,000 c.c. record for the same course held since 1921 by a British big twin.

### Austin L.C. and M.C.C.

It is proposed to hold a Charity Gymkhana on Saturday, July 1st, at the Austin Playing Fields, Rednal, in aid of the Birmingham hospitals and other charities if sufficient support is given to the movement. Motorists entering for this event may be sure of enjoying a good programme, and some valuable prizes are being offered.

### Essex Motor Club.

Speed trials have been arranged in conjunction with the Essex County and Southend Automobile Club to be held on Wednesday, July 5th, at Westcliff-on-Sea. Particulars of the events are now available together with entry forms, and may be obtained either from Mr. E. J. Bass, 40, Chancery Lane, W.C., or Mr. Maitland Keddie, Hintlesham, The Leas, Westcliff. Entries close on June 22nd.

### North London M.C.C.

The following are the results of the Slow Hill Climb held on Thursday last at Handpost Hill, Northaw:—Solo Class: (1) H. Williams (499 Rudge-Multi), silver medal. (2) L. P. Walter (550 Triumph), bronze medal. Sidecar class: (1) J. Hawkins (796 Ariel sc.), silver medal. There were twelve and five entrants respectively in the solo and sidecar classes. An inter-club hill climb in conjunction with the N.W.L.M.C.C. is being arranged to take place on Saturday, July 22nd.

### Bury St. Edmunds and District M.C.C.

Inter-club speed trials were held jointly by this club, Ipswich and District, and Cambridge Town and County clubs near Six Mile Bottom, over a course half a mile in length, when 150 entries were received. Results:

350 c.c. (Solo).—1, McKechnie (349 A.J.S.); 2, Spencer (349 A.J.S.).

500 c.c. (Solo).—1, Bassett (398 A.B.C.); 2, D. Robinson (492 Sunbeam), and Ludlow (490 Norton).

750 c.c. (Solo).—1, Fenn (499 Triumph); 2, D. Robioson (492 Sunbeam).

1,000 c.c. (Solo).—1, Bassett (398 A.B.C.); 2, Ludlow (490 Norton).

600 c.c. (Sidecars).—1, Fenn (499 Triumph; 2, N. Robinson (492 Sunbeam).

1,000 c.c. (Sidecars).—1, Hinde (986 Trump-Jap); 2, Fenn (499 Triumph).

These results were obtained from standing starts with engines off. The winners in the flying starts were as follows:

350 c.c. (Solo).—McKechnie (349 A.J.S.).
500 c.c. (Solo).—Basset (398 A.B.C.);
750 c.c. (Solo).—Bassett (398 A.B.C.).
1,000 c.c. (Solo).—Bassett (398 A.B.C.).
600 c.c. (Sidecars).—Fenn (499 Triumph).
1,000 c.c. (Sidecars).—Hinde (986 Trump-Jap).

Bassett's speed for the standing start was 59.8 m.p.h., and for the flying start 84.9 m.p.h. Hinde in the flying sidecar race reached 65.4 m.p.h. These three results gained special prizes.

## West Kent M.C.

The Wilson Cup Trial has been postponed until Saturday next, June 24th. Intending competitors should communicate with Mr. A. E. Jessop, 91, Park End, Bromley, Kent.

## Epsom and District M.C.C.

A general meeting of members is being held to-night, at 7.45 p.m., at the Spread Eagle Hotel, Epsom, when matters for discussion will include the aims and objects of forming the club, rules, subscription, and the programme for this year.

## South Eastern Centre A.C.U.

An open reliability trial is being held on July 8th, starting from Caterham and including various parts of Kent and Surrey. Further details of the run may be obtained from Mr. Alan Gruzelier, 605, Ulster Chambers, 168, Regent Street, London, W.

## Aberdeen and District M.C.

A hill-climb was held last Saturday on Cairn o' Mount (South Side), when R. Dempster (499 Triumph) took first place. H. S. Dawson (499 Sunbeam) came second, and G. K. Ferres (349 Massey-Arran) third. The sidecar class was cancelled, as only two machines were entered.

## Loughborough College M.C.C.

In a speed judging competition over a 33-mile course the principal results were: (1) F. A. Beardmore (998 Indian), 2½m. error; (2) S. C. Wells (499 Sunbeam), 5½m.; (3) Miss D. A. Travers (496 N.U.T. sc.), 6½m.; (4) S. Hillyer (498 P. and M.), 6¾m.; (5) D. L. David (998 Indian sc.) and H. J. Baker (599 Sunbeam), 7m.

## Essex County and Southend A.C.

The "knock-out" hill-climb took place last Saturday afternoon, when a large number of competitors mustered at the club's headquarters to proceed to Bottiedown Hill. The winner of the event was K. S. Duncan (499 Sunbeam), who was awarded the silver cup, doing the slowest time of the day in 89s.

## Annfield Plain and District M.C.

The results of the Whit Monday reliability trial, when the Skilbeck challenge cup and prizes were competed for, are as follows: (1) Cup and gold medal, T. Brown (700 Humber sc.); (2) gold medal, G. Humphrey (498 Ariel); (3) silver medal, J. Almond (550 Triumph); (4) bronze medal, F. Hunter (550 Triumph); (5) E. Wilkinson (633 Norton); (6) J. Crawford (688 Coventry Victor).

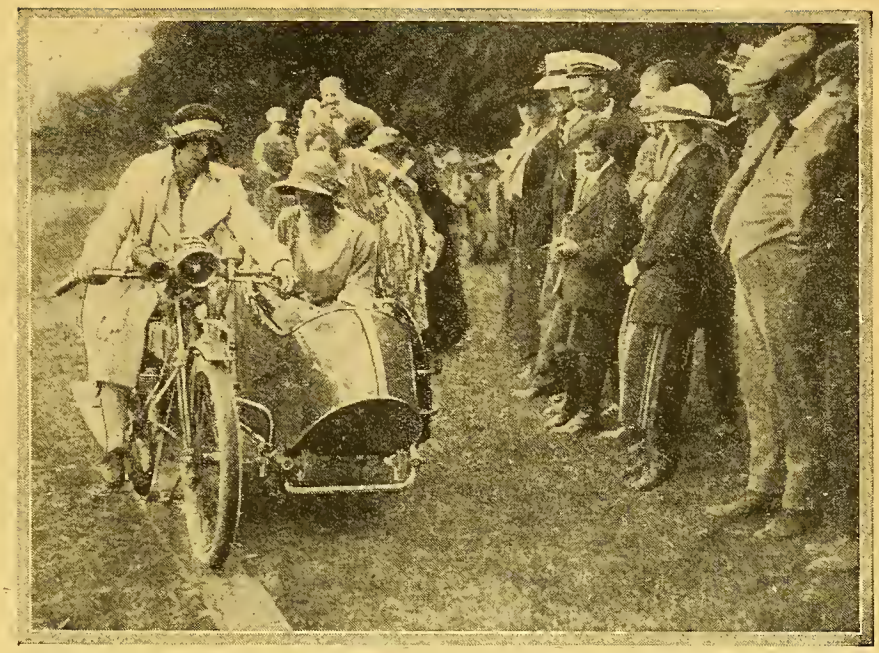
## Surbiton M.C.

Starting at 1.30 p.m., the Ealing M.C.C. and the above club are holding a joint hill-climb at Kop Hill, Princes Risboro', on July 1st. Motor cycle classes will be run on time only, and each machine will be allowed two runs up the hill, the fastest time to count. If sufficient support is given to what promises to be a sporting affair, it is hoped to make this an annual event.

## Yeovil M.C.C.

The results in the Yeovil-Land's End trial held recently are as follows:

Moffat Cup (open to teams of three), presented by Mr. P. W. Moffat, of Yeovil: won by Yeovil team—D. Southcombe (490 Norton), max. marks; B. R. Robbins (293 New Imperial), lost 10 marks; F. W. Cole (10h.p. Wolseley), lost 6 marks. Motor cycle and sidecar: 1, S. Hall (998 Rudge).



THE GREASY PLANK FOR MOTOR CYCLISTS. An item on the programme of the Exeter M.C.C.'s gymkhana was riding along a well-greased plank, a more difficult feat than one would imagine on a sidecar. A lady member making a good performance.

## S.E. Durham M.C.

A reliability trial held not long ago attracted a good attendance of members. Silver shield and gold medal: E. Welsh. Gold medal: P. Bell. Silver medals: H. Greenwell, J. Trimdon, W. Langrin. Bronze medals: J. Graves, J. Trimdon, B. Raine, and M. Bates.

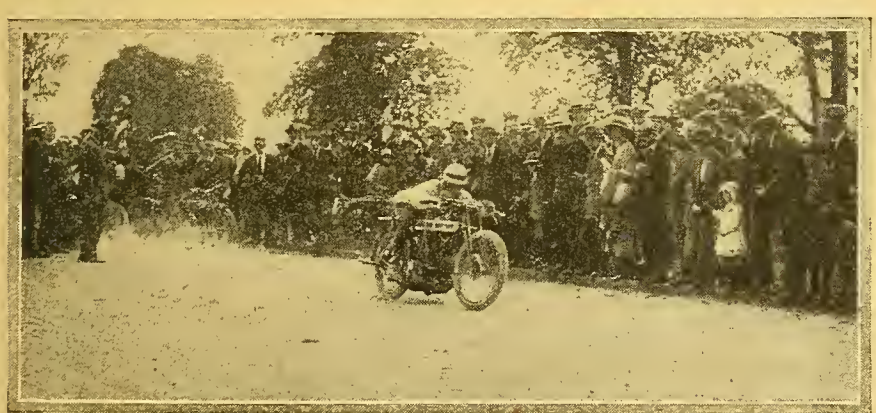
## East South Wales Centre A.C.U.

An open hill climb is being held on Saturday, July 1st, on Catsash Hill, near Newport, starting at 12 noon, when various challenge cups and other prizes will be competed for. Particulars can be had from Mr. A. B. Adams, "The Croft," Clevendon Road, Newport, Mon.

## Plymouth and District M.C. and L.C.C.

Excellent weather prevailed for the hill-climb arranged at Huccaby on June 14th. The course is rather "freakish," and in the three-eighths of a mile ascent three hairpins call for skilful negotiation. A number of spectators assembled to witness the event.

Ian Spooner (499 Sunbeam) made the fastest time, 68⅖s., in the class for solos under 600 c.c.; while his time in the solo unlimited section was 74s. A. Browne (293 New Imperial) finished in 83s. for the solo class under 350 c.c.; and 86⅖s. was recorded by J. Illingworth (490 Norton).



At the Avonmouth Speed Trials organised by the Bristol M.C. and L.C.C. A. T. Koehler winning the unlimited class on a 494 c.c. Douglas.

## South Birmingham M.C.C.

In an inter-club trial held recently by South Birmingham clubs the winner was H. Greaves on a Beardmore Precision fitted with a Barr & Stroud engine, who gained the Palmer Cup and a silver cup for the best performance of the day.

## Exeter M.C. and J.C.C.

A good attendance marked the first of an annual series of gymkhanas held by the club at Woodbury Common on June 11th. Slow Race: solo machines, O. Ford; sidecars, L. Jones. Acceleration Race (open): 1, O. Ford; 2, L. Peters. Needle-threading for Sidecar Passengers: 1, Mrs. Medlin; 2, Miss Clark. Egg and Spoon Race: sidecar, Fry Allen; solo, J. Bliss.

## Blackpool and Fylde M.C.

Fine weather favoured the 100-mile non-stop reliability trial for the Chadwick Trophy, held on June 18th, when fifteen machines started and only four succeeded in finishing. The course, which was fairly rough, had to be covered three times: 1, W. Lyons (532 Scott); 2, G. W. Nabb (494 Douglas), and J. Riley (499 Sunbeam); and 4, C. V. Jennings (532 Scott).

## North Western Centre A.C.U.

The Premiership Reliability Trial, over a course approximately 150 miles in length, which is being held on June 25th for the "200 Deansgate" Cup, will be open to all members of clubs in the North-Western Centre. Particulars and entry forms may be obtained from Mr. J. H. Place, "Girsee," Manchester Road, Burnley, to whom all communications should be addressed.

## Isle of Wight M.C. and L.C.C.

In the Speed Trials held recently, under excellent weather conditions, fatest time of the day was made by E. G. H. Morris (490 Norton), at 63.1 m.p.h. 275 c.c., 2-stroke, solo class: 1, S. Russell (225 Royal Enfield), 48 m.p.h.; 2, C. G. Fox (225 Royal Enfield), 44.4 m.p.h. 350 c.c. solo class: C. F. Stagg (349 A.J.S.), 58.8 m.p.h.; 2, N. G. Chinchen (349 A.J.S.), 53.5 m.p.h. 500 c.c. solo class: E. G. H. Morris (490 Norton), 63.1 m.p.h.; 2, C. F. Stagg (349 A.J.S.), 58.8 m.p.h. 750 c.c. solo class: 1, E. G. H. Morris (490 Norton), 63.1 m.p.h.; 2, C. F. Stagg (349 A.J.S.), 57.7 m.p.h. Unlimited solo class: 1, E. G. H. Morris (490 Norton), 63.1 m.p.h.; 2, C. F. Stagg (349 A.J.S.); 60 m.p.h. 600 c.c. sidecar class: J. H. D. Allen (557 B.S.A. sc.), 40 m.p.h. Unlimited sidecar class: 1, E. G. Loe (988 Royal Enfield), 51.7 m.p.h.; 2, H. W. Linington (988 Royal Enfield), and G. R. Scotney (735 Royal Enfield), 48 m.p.h. Light car class: Dr. E. S. Craig (Morgan), 45 m.p.h.

# LONDON-EDINBURGH RESULTS.

## 77°/₀ of Motor Bicycle Starters awarded Gold Medals; Sidecars 70°/₀; Cycle Cars 60°/₀, and Cars 76°/₀.

AS usual, this popular event, the fifteenth annual club run of the Motor Cycling Club from London to Edinburgh, resulted in a host of gold medals being awarded. Analysed with the characteristic thoroughness of Mr. F. T. Bidlake, the M.C.C. timekeeper and trials secretary, the summarised entries and awards stand as shown in the schedule:

| | Solos. | Sidecars. | Cycle cars. | Cars. | Totals. |
|---|---|---|---|---|---|
| Entries | 129 | 110 | 20 | 133 | 392 |
| Starters | 121 | 104 | 18 | 123 | 366 |
| Retirements | 8 | 13 | 3 | 14 | 38 |
| Finishers | 113 | 91 | 15 | 109 | 328 |
| Gold Medals | 94 | 73 | 11 | 94 | 272 |
| Silver Medals | 17 | 13 | 2 | 13 | 45 |
| Bronze Medals | 1 | 2 | — | 1 | 4 |
| Disqualified | 1 | 3 | 2 | 1 | 7 |

| Douglas .. .. | 2 | 1 |
| Raleigh .. .. | 1 | 0 |

THE T.T. Races are first and foremost tests of DURABILITY. Only motor cycles which are reliable in all emergencies, which are consistently efficient and equal to constant strain can possibly FINISH in these trials. Hence to finish is an achievement and the only correct way to judge the merits of the makes of machines competing is to find out the proportion of STARTERS who FINISHED.

A large percentage of "finishers" says more for the *standard* of efficiency of a make of machine than a spectacular win—however brilliant—discounted by a big percentage of starters on the same make who *failed to finish.*

Judged in this way, which are the machines reaching the highest average of efficiency? The Table opposite, compiled from The Junior and Light-weight results, is enlightening, and demonstrates the splendid efficiency of The Coulson.

*In 1/6 and 2/6 sizes, at Halford's shops and all other enterprising dealers, or direct from*

**HOWSE'S** —*The* **Rust-Preventer Firm,— Union Works, SMETHWICK.**

Postage 4d. and 6d. each size extra.

# MISCELLANEOUS ADVERTISEMENTS.

## PRICES.

**ADVERTISEMENTS** in these columns —First 12 words 3/–, and 3d. for every additional word. Paragraphs of under 8 words are charged double rate. Each paragraph is charged separately. Name and address must be counted. Series discounts, conditions, and special terms to regular trade advertisers will be quoted on application.

Postal Orders and Cheques sent in payment for advertisements should be made payable to ILIFFE & SONS Ltd., and crossed & Co. Treasury Notes, being untraceable if lost in transit, should not be sent as remittances.

All advertisements in this section should be accompanied with remittance, and be addressed to the offices of "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4. To ensure insertion letters should be posted in time to reach the offices of "The Motor Cycle," by the first post on Friday morning previous to the day of issue. Advertisements that arrive too late for a particular issue or that are crowded out will automatically be inserted in the following issue unless accompanied by instructions to the contrary.

All letters relating to advertisements should quote the number which is printed at the end of each advertisement, and the date of the issue in which it appeared.

The proprietors are not responsible for clerical or printers' errors, although every care is taken to avoid mistakes.

## NUMBERED ADDRESSES.

For the convenience of advertisers, letters may be addressed to numbers at "The Motor Cycle" Office. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charge, which must include the words Box one, c/o "The Motor Cycle." Only the number will appear in the advertisement. All replies should be addressed No. 000, c/o "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4. *Readers who reply to Box No. advertisements are warned against sending remittance through the post except in registered envelopes; in all such cases the use of the Deposit System is recommended, and the envelope should be clearly marked "Deposit Department."*

In the case of motor cycles offered for sale under a box number, as it is unusual for these to be sold without first being inspected by the intending purchaser, advertisers will facilitate business by embodying in their advertisements some mention of the district in which the machine offered may be seen and tried.

## ☞ DEPOSIT SYSTEM.

Persons who hesitate to send money to unknown persons may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Motor Cycle," both parties are advised of this receipt.

The time allowed for a decision after receipt of the goods is three days, and if a sale is effected we remit the amount to the seller, but, if not, we return the amount to the depositor. Carriage is to be paid by the buyer, but in the event of no sale each party pays carriage one way. The seller takes the risk of damage in transit. For all transactions up to £10, a deposit fee of 1/- is charged; on transactions over £10 and under £50, the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6 and on all transactions over £100, ½%. All deposit matters are dealt with at Dorset House, Tudor Street London, E.C.4, and cheques and money orders should be made payable to Iliffe & Sons Limited.

The letter "D" at the end of an advertisement is an indication that the advertiser is willing to avail himself of the Deposit System. Other advertisers may be equally desirous, but have not advised us to that effect.

## SPECIAL NOTE.

**Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post.**

MANUFACTURERS' STOCK

MAKINKOT BRAND

*TO BE CLEARED.*

Fawn double texture, interlined rubber,

MOTOR SUITS

THESE suits are made of Fawn double texture cloth, interlined rubber.

The seams are cemented, sewn and taped, making these absolutely waterproof.

Will stand any amount of hard wear.

The jackets are made double-breasted, with belts and wind cuffs.

The Motor Leggings are made fastening with clips and straps, and have wind gussets in leg.

These suits actually cost over 30/- to manufacture without any profit, but we have several thousands to clear.

Every suit is guaranteed absolutely waterproof, and should these not meet entirely with your approval, we guarantee to return your money in full, if returned within seven days.

SPECIAL PRICE,

29/11 Carriage 1/- extra.

We have also several thousands heavy Twill Suits to offer. These are made of the heavy Twill used for making Motor Hoods, and are one of the finest suits made for motor cycling, interlined rubber. They are made with sewn and cemented seams, and taped, also the seams of these suits are striped, making these garments absolutely waterproof and we are prepared to give a guarantee that these are absolutely impossible for water to penetrate through. The Motor Leggings are made in the same way with wind gussets, fastening with clips and straps. The Suits are in sizes 34, 36, 38, 40, 42 and 44 chest, lengths inside leg are 27, 29, 31. Please state when ordering by post, measurements of chest, length inside.

50/- Carriage 1/- extra.

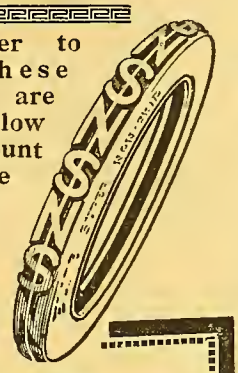
# Special Offer.

¶ ¶ In order to introduce these Covers, we are prepared to allow a special discount of 25% off the first 1,000 covers sold. This offer cannot be repeated.



THE

## EXTRA HEAVY MOTOR CYCLE COVER

has been designed to withstand the kick of any motor cycle engine yet made and to last out any other make. These covers are a combination of everything that is best in tyre manufacture based upon expert knowledge obtained during the past 12 years we have been advertising motor cycle tyres of various makes in this journal.

**THE ELITE SUPER NON-SKID** is a true non-skid—not merely a fancy pattern. It embodies all the true principles that go to make a non-skid—Side Ribs, Cross Bars & Suction Cups.

**THE ELITE SUPER NON-SKID GUARANTEES YOU AT LEAST 33⅓ per cent. more mileage** than you have obtained from any other make, no matter what the price.

**ELITE SUPER NON-SKID COVERS.**

| Size. | Special Price. | | List Price. | |
|---|---|---|---|---|
| | Cover. | Tube. | Cover. | Tube. |
| 26×2¼.... | 29/6 | 6/9 | 40/- | 7/6 |
| 26×2½×2¼ | 42/- | 6/9 | 56/- | 9/- |
| 28×3..... | 51/- | 7/11 | 68/- | 10/6 |
| 700×80... | 54/6 | 7/6 | 69/6 | 9/9 |

As certain sizes will shortly be withdrawn from all manufacturers' lists as non-standard, we have not laid down moulds in the Super Non-skid pattern; but for the convenience of our customers have made arrangements to supply these non-standard sizes in a Three-ribbed Pattern which is exactly of the same construction and weight.

**ELITE THREE-RIBBED COVERS.**

| Size. | Special Price. | | List Price. | |
|---|---|---|---|---|
| | Cover. | Tube. | Cover. | Tube. |

Bertie's Testimonials

Are his Satisfied Clients

Dear Sirs,

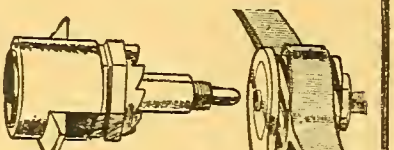
The 4 h.p. Douglas "Clutch Conversion Set" you supplied me with has given complete satisfaction.

Having had to take the clutch down on five occasions last year to replace a broken draw bolt, I decided upon trying your "Patent," which. I may add, has since given splendid results.

I have a perfect sense now of confidence and security, instead of, as previously, getting the "wind up," as to when I should get let down with a broken draw bolt. From my personal experience, therefore, I can most highly recommend it and add that the "Conversion Set" is simply IT.

Yours faithfully,

(Sgd.) C. G. EMERY.



To 4 h.p. Douglas Owners

No more broken drawbolts.

A new form of operating mechanism for the 4 h.p. Douglas Motor Cycle, by which the Drawbolt is entirely eliminated.

*We shall be pleased to forward you our descriptive leaflet upon request.*

BURLINGTON UNDERSHIELDS.

Enamelled black and with fittings for 2¾ h.p. and 4 h.p. Douglas, 5/- each. Postage, 1/- and 1/3 respectively.

# Why Not

## Select your motor cycle in comfort at home?

## Send to us for our lists.

### Wherever you live we can serve you best.

We can send you catalogues and full particulars of any of the well-known makes, or, if you are desirous of purchasing a second-hand motorcycle, you may rely upon the descriptions of our machines being absolutely accurate, and the machines themselves beyond reproach.

Our Extended Payment system will bring the machine you require within your reach.

We can accept a minimum deposit of one-fifth of the cash price and the balance paid, while you ride, in 12, 15 or 18 equal monthly instalments. The extra charge for credit is very small and carries a bonus for regular payment.

Any make may be purchased on these terms, and our present stock of 1922 models available for immediate delivery include:—

**A.J.S., Allon, B.S.A., Douglas, Enfield, Hawker, Martinsyde, Matchless, McKenzie, New Imperial, New Comet, Norton, O.K. Junior, P. & M. Rudge, Ruby, Stanger, Triumph, Zenith, etc., etc.**

Before buying elsewhere let us know the make of machine you wish to purchase, the accessories you require, the amount of deposit you wish to pay and how you require the balance. We can then send you quotations which we are certain will appeal to you. A list of second-hand machines sent post free on request.

**We have the goods at a price you can pay.**

The Service Company Ltd. LONDON

3½h.p., Palmer spring frame, Humber engine, Bosch, B. and B., variable pulley, recently overhauled, enamelled and plated, lamps, good condition; £35.—Lippiatt, Bell Hotel, Radstock. [4744

SPARKBROOK 2½h.p., cost £52/12/6; Sun-Jap 2¾h.p., cost 63 gns.; both purchased May 3rd, 1922; owing to unforeseen circumstances, must sell; best offer.—R. Pettitt, Builder, Upper Dicker, Sussex. [4877

HALIFAX.—Cash bargains: Premier 3½h.p., Grado gear, £22/10; ditto 2-speed, £27/10; 6h.p. Rex, 2-speed, and sidecar, £24/10; Ariel 3½h.p., Grado gear, £24/10; 2¾h.p. New Imperial, £22/10; 8h.p. Matchless Combination, £39/10.—Collier's Motories, Horton St., Halifax. [5787

1921 M.A.G. 4h.p. Twin, 3-speed, kick start, hand clutch (Sturmey gear box), nickelled wheels, sloping tank, etc., handsome mount, fast, reliable, guaranteed absolutely faultless, appearance indistinguishable from new, mileage under 2,000, fully equipped, expert examination, absolutely any trial, licensed for year, engineer owner selling through illness; £65, no offers; guarantee given.—1, The Nooks, Dorset Rd., Mottingham, Eltham, S.E.9. [5689

## MOTOR CYCLES FOR SALE.

### Miscellaneous.

BLACKPOOL Bargains.—1922 Rudges, 1922 Ariels, 1922 O.K.'s, 1922 New Imperials, 1922 Quadrants, 1922 Royal Rubys. Quick deliveries. Good price for your machine; exchange.—Booths' Motories, Waterloo Rd., Blackpool.

BLACKPOOL Bargains.—New 1921 4h.p. Bradbury, all chain, £78/10, with sidecar £95/10. —Booths' Motories.

BLACKPOOL Bargains.—3½h.p. Triumph, £18/10/6; ditto, 2-speed, £22/10/6; countershaft model, £65/10/6.—Booths' Motories.

BLACKPOOL Bargains.—3½h.p. Humber, £20/10/6; 1920 Wooler, £39/10/6; 6h.p. 3-speed Rudge, £29/10/6; 3½h.p. Premier, £24/10/6.—Booths' Motories.

BLACKPOOL Bargains.—3½h.p. Singer, speed gear, clutch, £27/10/6; Phelon and Moore, £19/10/6; 3½h.p. Triumph, 3-speed, £22/10/6.—Booths' Motories.

BLACKPOOL Bargains.—1¼h.p. J.E.S., £10/10/6; N.S.U. lightweight, £13/10/6; 2-speed O.K., £23/10/6; 6h.p. 2-speed Rex, with Montgomery sidecar, £25/10/6.—Booths' Motories.

BLACKPOOL Bargains.—2¾h.p. Douglas, £25/10/6; 4h.p. Douglas, new sidecar, £69/10/6; A.J.S. combination, £49/10/6; 8h.p. Premier combination, £47/10/6; 6h.p. Enfield combination, £39/10/6.—Booths' Motories.

BLACKPOOL Bargains.—120 G.N., dynamo lighting, spare wheel, £110/10/6; 1920 Tamplin, £59/10/6; Morgan de Luxe, £147/10/6; two 1920 Matchless combinations, £115/10/6 and £120/10/6; 1920 Rudge combination, dynamo lighting, £79/10/6; 1920 Rudge, £55/10/6; Indian Combination, £45/10/6; 1920 Sun, £35/10/6; another, £39/10/6; Alldays' Allon, £36/10/6; another, £42/10/6; 1922 O.K., mileage 600, £34/10/6; several others cheap; push cycles taken in exchange.—Booths' Motories, 294, Waterloo Rd., Blackpool. [4538

PRECISION 4¼h.p., 3-speed, K.S., with latest 2-seater sidecar, windscreen, apron, tools, spare tyre, overalls, etc., an absolutely perfect combination, ready for 1,000 miles' tour, powerful hill-climber; any trial; £75, or near.—11, Cottage Green, Southampton St., Camberwell, S.E.5. [4936

F.O.C.H for secondhand cycles, combinations and runabouts at bargain prices. Exchanges arranged. Any new cycle, combination or car supplied, cash or deferred payments.—Fair Offer Car House, 5, Heath Street, Hampstead (near Tube) 'Phone: Hampstead 3752. Hours 9-7, including Saturdays. [1611

## MOTOR CYCLES FOR HIRE.

HIRE Latest Models cycles and combinations, any period.—Write terms, Fowler Brigdeo, 130, Enston Rd. [0795

G.N. Light Car and Douglas Motor Cycle and Sidecar for hire; 8 gns. and £5 per week respectively; fully insured.—Rodwell, 8, Red Lion Sq., Holborn, W.C.1. Chancery 7272. [8776

ROBERTSONS Motors, Ltd., for many years have specialised in this class of work. If machine is purchased, full amount of hire up to one week is allowed.—157b, Gt. Portland St., W.1. [6083

## MOTOR CYCLES WANTED.

## MOTOR CYCLES WANTED.

WE

ALWAYS Buy

SOLOS, combinations, cycle cars. If in town, write, 'phone, or call. If country, send to London terminus. We collect free and send best cash offer.—W. T. Dunn, Ltd., 326, Euston Rd., London. Museum 5391. [0332

A

MAUDES' Motor Mart are purchasers for spot cash of late models Sunbeam, Triumph, Douglas, Norton, and Morgans.—Maudes', 100, Great Portland St., London. [1128

INDIANS, late and early type, cheap for cash.—17, Heaton Rd., Mitcham. [5339

PALMER'S Garage, Tooting.—The pre-eminent place for disposing of motor cycles.

PALMER'S Garage, Tooting, will make you a cash offer at sight.

PALMER'S Garage, Tooting.—You will be sure of a good cheque if you sell your machine at Palmer's Garage.

PALMER'S Garage, Tooting.—Thousands of men have sold their machines here.

PALMER'S Garage, Tooting, make a speciality of motor cycles in the weekly auction sale every Thursday at 2.

PALMER'S Garage, Tooting.—No garage charge is incurred until 7 days' notice is given.

PALMER'S Garage, Tooting, will collect machines from any London railway station. The auction sale is held every Thursday, commencing 2 p.m.

PALMER'S Garage, Tooting.—If cash offer not accepted machine can be included in auction sale held every Thursday.

PALMER'S Garage, Tooting.—You fix the price and we do the rest.

PALMER'S Garage, Tooting.—Terms: Selling commission 7½%, not chargeable unless machine is sold. If no sale a nominal auction fee is charged—for motor cars 20/-, motor cycles under £50 value 5/-, ditto over £50 value 10/-. When we effect a sale these charges are cancelled and commission charged.

PALMER'S Garage, Tooting.—Catalogue free. Tel.: 208 Streatham. T.A.: Palmer's Garage, Tooting. [5579

MODERN 2¾h.p. A.J.S., Scott Squirrel, or 2¾h.p. Levis.—51, Queen St., Sheffield. [5758

WANTED, Scott, not earlier 1920, good condition; cheap.—29, Friars Rd., Stafford. [5008

TRIUMPH 4h.p., 1920 or later; duds ignored; cash. —Ashworth, 26, Brett St., Sheffield. [5755

OLD Quadricycle wanted. State particulars.—Adams, 43, St. Anne St., Liverpool. [4795

SUNBEAM, modern, equipped; reasonable; no dealers.—Write 6, Limes Grove, S.E.13. [4830

WANTED, countershaft Triumph and good combination.—24, Balliol Rd., North Kensington. [5470

WANTED, Levis or Velocette, 2-speed, clutch, not earlier 1920.—Box 2004, c/o *The Motor Cycle.* [4974

WANTED, motor cycle, 2¾h.p., 4-stroke, about £16.—Reg. Knapp, Bourton, Shrivenham, Berks. [5235

WANTED, 3½h.p. Rudge-Multi, Norton, Rover, Philipson or similar.—Write 24, The Broadway, N.8. [5539

WANTED, 2¾h.p. Douglas Motor Cycle, 2-speed, in good running order.—Box 2001, c/o *The Motor Cycle.* [4978

GOOD Motor Cycle or Combination, Norton preferred, cash waiting.—Green, Wine Merchant, Reigate. [5414

MODERN Solos and Combinations for cash, or in exchange.—R. B. lark and Co., 7, Exhibition Rd., S.W.7. [3492

WANTED, Triumph combination or solo, 1918 or later; lowest price.—Western, 7, Artillery Rd., Guildford. [5560

WANTED, late 6h.p. Zenith Sports; exchange late B.S.A. and cash.—V. Quertier, Slinfold, Horsham. [5367

JAMES 4¼h.p. Cylinder, 1915, new or good second-hand preferred.—Bailes, Thornhill Garage, West Hartlepool. [4953

WANTED, good W.D. renovated Triumph.—Write full particulars, engine No., etc., 34, Amwell St., Hoddesdon. [5581

WANTED, motor cycle, and condition, not earlier than 1913; cheap, cash waiting.—61, Grand Parade, Harringay. [4161

WANTED, modern solo, 2¾h.p. New Imperial preferred.—Write, Deacon, St. Joseph's Terrace, High St., St. Mary Cray. [5342

SINGLE-CYLINDER Combination, countershaft gears, K.S., recent model, known make.—Allsop, Rosengrave St., Derby. [5536

 All letters relating to advertisements should quote the number at the end of each advertisement, and the date of the issue Motor Cycles advertised by private owners are, when desired, marked (P).

## Motor Cycle Patrols for I.O.M.

A REPORT which has just been presented to the Isle of Man Government recommends the adoption of motor cycle police patrols. We agree, with the Departmental Committee of the Isle of Man Constabulary, that considerable financial economy and additional efficiency can be derived from abandoning the present practice of stationing police in isolated rural localities. With motor cycle patrols the policing of rural districts could be more effectively carried out by attaching to the police stations at the important towns police officers to act as motor cycle patrols, the motor cycles being provided with sidecars for the conveyance of additional officers, when necessary.

## Sidecar Skids.

IN several ways the regulation which necessitated the fitting of skids to the chassis of machines entered in the recent 200 miles sidecar races is worthy of notice.

Primarily it would seem to be but a sorry commentary on the security of sidecar axles when subjected to the stresses of continued high speed. In actual fact no occasion arose during the event which called the skid into action; thus a regulation praiseworthy in its effort to safeguard the riders was just a little over-anxiously conceived.

Stub axles on cars very, very seldom come adrift, and, although there are occasional instances, no one regulates that racing cars shall be fitted with skids. In the earlier days of sidecars a stand was actually marketed which had a small wheel at its foot, so that in the event of the axle breaking, the chassis would run on the safety wheel until the outfit could be pulled up. With the high tensile and shock-resisting steels available to-day no open-sided wheel need be carried on an axle so lacking in strength and reliability as to need the safeguard of a skid.

If sidecar stub axles could not be relied upon, the logical remedy would be to enclose the wheel, using a spindle of the cycle type supported at both ends. The regulations of the 200 mile races apparently took no cognisance of this type of sidecar chassis.

## Ladies in Colonial Type Trials.

WHILE no one can fail to acknowledge the pluck of ladies who enter some of the more arduous trials, instances frequently occur where the wisdom of ladies competing in severe events is questionable.

Despite unlimited courage, riding ability, and grit, the physique of many ladies who can handle a machine to perfection is not such as to enable them to deal effectively with every situation which may arise. A case in point came under our observation in a recent trial of the frame-smashing variety. On a particularly difficult section a lady competitor led a string of seven or eight solo riders; at the culminating point of the observed section the lady fell and had insufficient strength to lift her machine clear of the course. Before she could do so, indeed, six riders had been stopped, and one at least definitely lost half-a-dozen places.

It is only in such circumstances as these that the lady competitor is out of place. In club events, of course, she may ride for sport and do no serious harm. In open trials of the rougher variety her presence is seldom of value from a propaganda point of view, for the general public is not edified by the sight of one of the fair sex struggling with a barely controllable machine amidst rocks and boulders—it is not in this phase of competition work in which ladies will find their best sphere of activity.

An index to the advertisements in this issue will be found on the page facing the back cover.

## The Scottish Light Car Trials.

THIS recent event attracted several entries of interest to motor cyclists, amongst which the brace of G.N.'s certainly stand first. The new sports model G.N. driven by L. A. Cushman was one of the select seven (out of 44 starters) to register an absolute non-stop. I am told that this model (actually one of Frazer Nash's own competition cars) is to be standardised and sold under a speed guarantee of 70 m.p.h., though the price, I fear, must be proportionate to the guarantee. The trials route pointedly evaded Inverfarigaig Corkscrew, though passing, so to speak, within inches of it. Incidentally, there is good news for our competition riders, for I hear that the cars widened the top corner on Amulree quite perceptibly, knocking large slabs off the bank just at the crucial point. Several of the modern "baby four" cycle cars competed—a Salmson, two Amilcars, and two Mathis, and they all did tolerably well. George Griffiths, the famous Zenith expert, handled a 12 h.p. Talbot with consummate skill, and was one of the wee band of non-stoppers; but I am sorry he has fallen from grace. Two wheels for sport, George, you know; three for safety; and four for swank. Or so they say. But Griffiths taught the car men something. The hill-climbing marks went by formula. Car formulæ, as we all know, put an absurd value on weight. Griffiths naturally had to accept any old observer the club might choose to give him. But he collected the best-fed assortment of passengers you ever saw. Regular Glaxos, both of them. You cannot do an old hand like G. G. by forbidding competitors to stack lead in the bottom of the body.

## A Question of History.

SURELY our contributor's memory slipped up in a recent issue when he called the Levis the "great-grandfather of all two-strokes." In its early phases it did not frequent the competition world, and I am unable to trace from our files the date at which the first Levis took the road. But A. A. Scott patented his engine in 1904, and was riding an experimental machine with front wheel drive before that date. The Scott, much as we know it to-day, complete with the famous frame, kick-starter, two-speed gear, and water-cooling, made its trials bow in 1908, when it created a positive furore at two northern hill-climbs, finally making Coventry sing rather small on formula at the Newnham hill-climb, as a direct result of which the A.C.U. formula was modified to keep two-strokes in their place. When did the first Levis appear on the road? I have rather wobbly memories of riding one a mile or two in 1906, but am rather foggy about the date.

## A Frank Opinion of the Scott Sociable.

A LONG, interesting letter to hand from a Scott Sociable enthusiast, who has never before kept a mount over the second year or placed a repeat order. He sings its praises most judiciously. Economy its strong point—70 m.p.g.; oil consumption negligible, tyres still showing their high spots so that 10,000 miles per set seems assured. He doesn't object in the least to its lopsided appearance—"no good horse was ever yet a bad colour." To his thinking the chief crabs are that, like the rest of passenger machines, it has only one driving wheel, which it is apt to spin on greasy gradients, whilst it is less skidproof than a sidecar. Slightly faster on hills than a 550 c.c. single-cylinder outfit, but not capable of living with a good 1,000 c.c. It cannot wisely be hosed down at random, as the hubs and brakes are not waterproof. The joints of the suspension are exposed to mud. But he prefers it to anything else he has driven, and will continue to ride it until somebody brings out *a three-wheeler with two driving wheels*, which he regards as the ultimate mount for the seven-day-a-week economist who lives on nasty roads.

## Where We Score.

I SPENT the other day watching a car trial in the chamois country. You should hear some of these four-wheeler experts change gear. You couldn't create a nastier noise if you dropped a Ford car off the Eiffel Tower. Thank heaven I am merely a motor cyclist. When my sports single is doing fifty I can declutch and drop in second gear with the calm certainty that no shrieks of agonised steel will rend the heavens. But what *are* the car designers doing? We must lend them a motor cycle engineer or two.

## Some Engine.

FEW experiences are more interesting than a trial of some standard engine adapted by a clever engineer to his own peculiar purposes. One of my acquaintances still clings to the single gear belt

*Ixion's "MOTOR CYCLE REMINISCENCES" are available in book form, price 2s. 9d. post free, from "The Motor Cycle" Offices, Dorset House, Tudor Street, E.C.4.*

**Occasional Comments.—**

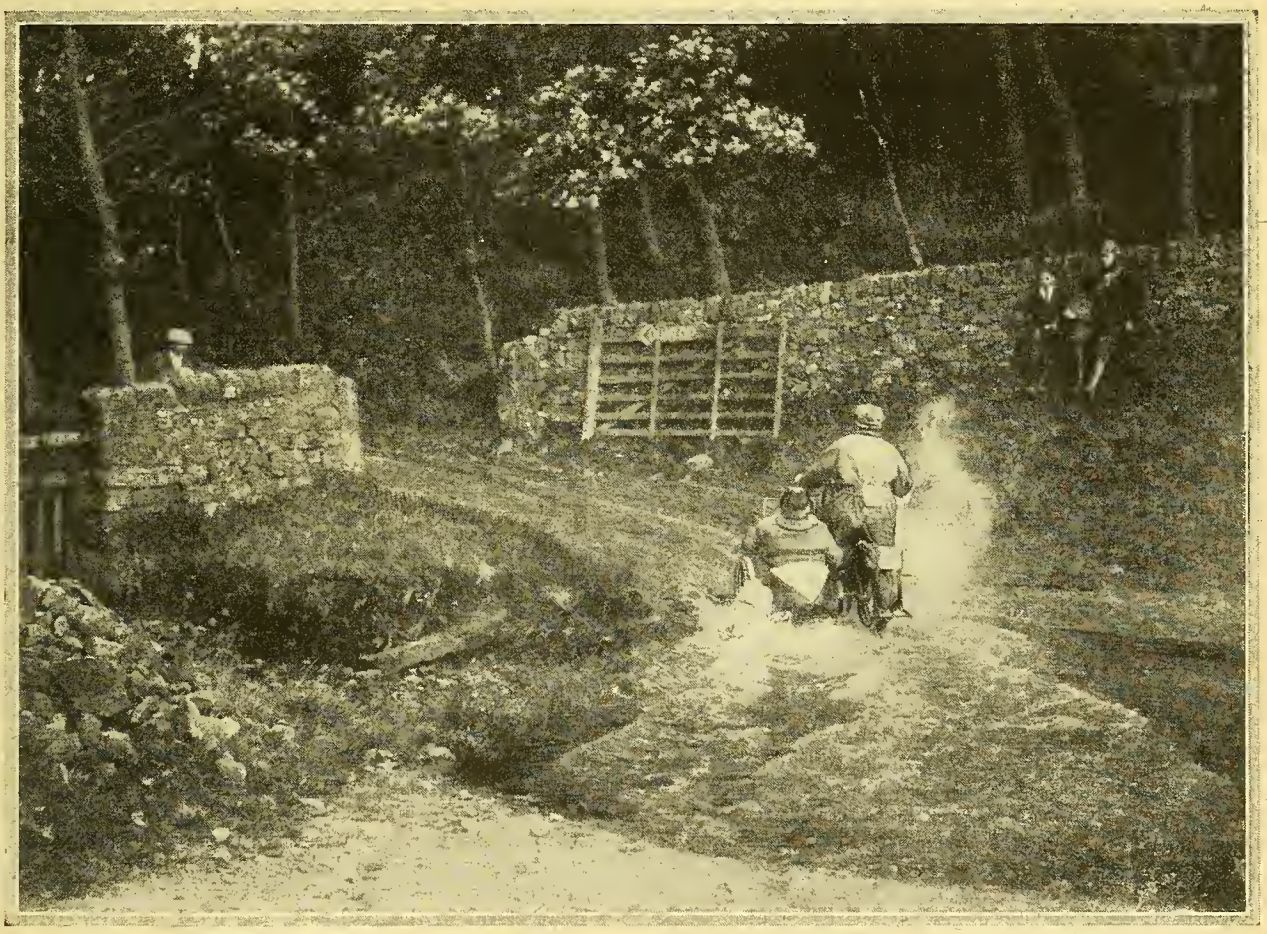
drive, which he employs on an elderly Matchless with a 1913 6 h.p. J.A.P. twin engine. Internally there is very little of the original engine left. Ricardo pistons, steel flywheels, special cams, and air-tight inlet valve guides are a few of his gadgets. The nett result is a machine which can be paddled off on a 3½ to 1 gear, ridden round a small flower-bed with the engine firing regularly, and accelerated to 65 m.p.h. He has a penchant for Continental touring, and spends his holidays—still single-geared—on Alpine passes, all of which he can climb. How is it done? Certainly. He has juggled with his carburetter so that he gets a very strong mixture at small throttle openings, thus the engine will slog round the elbow of a Tyrolese hairpin at 5 m.p.h. As you open up, the mixture is weak over the remainder of its range. Needless to say, I found the bus rather puzzling to handle on first acquaintance.

### Acceleration.

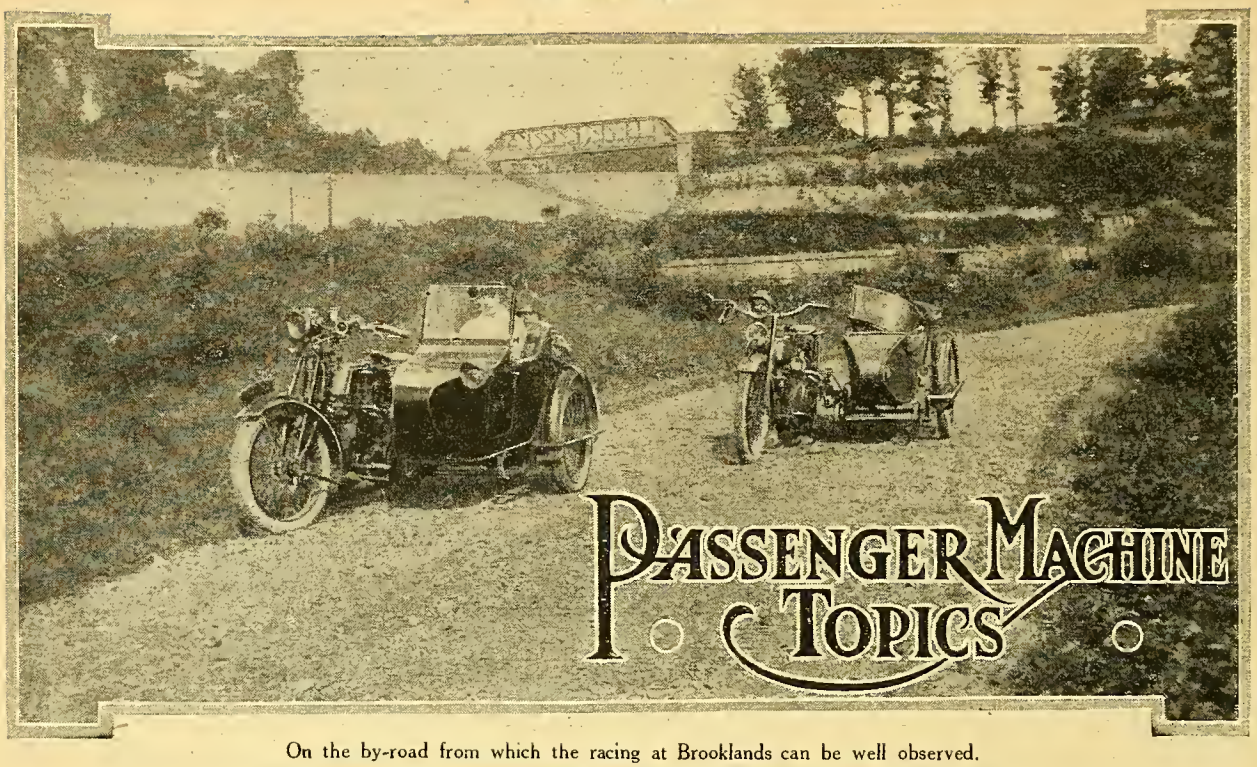
I HAVE just been looking through a batch of *The Autocar* photographs taken during the recent Scottish light car trials, and I notice that the wily Scots adopted a simple test which would assist motor cycle clubs to find a winner. The cars were stopped, and one end of a 50-yard cord was hitched to their tails. The rest of the cord was wound round a drum mounted on ball bearings and coupled to a rev. counter, the far end having a drop-off attachment. Drivers were then encouraged to tread on everything, and the man whose car spun the drum fastest got a banana or something. The fifty yards being ended, the cars were once more stopped whilst the cord was retrieved.

### The Two-jet Mouse Trap.

THERE is, of course, only one mousetrap carburetter, and for years past the speed boy's wail has been that you couldn't use a mousetrap Binks on the road, because it really hardly functions at all except at track speeds. Maison Binks has now evolved a touring mousetrap, complete with pilot jet for the tick-over. I am playing with one now, and am inclined to accept the inventor's claim that it puts several m.p.h. on to any sports 'bus. We are still in the honeymoon stage, and I haven't quite eliminated a bit of a flat when the engine hops over from the "*Nice* Mr. Policeman!" to the "Horizon, get out!" gait. But I think we are going to be pals for life.



AT THE YORKSHIRE CENTRE COLONIAL TRIAL. A certain method of stopping rushing tactics on hills is to find one with a watersplash at the foot. That illustrated even necessitated a left turn in the water before the ensuing grassy slope was negotiated. The rider is P. Pehrson (499 c.c. Dunelt sidecar) who made the best 500 c.c. sidecar performance.



# PASSENGER MACHINE TOPICS

On the by-road from which the racing at Brooklands can be well observed.

## Brooklands Impressions of the 200 Mile Sidecar Races.

By "FRIAR JOHN."

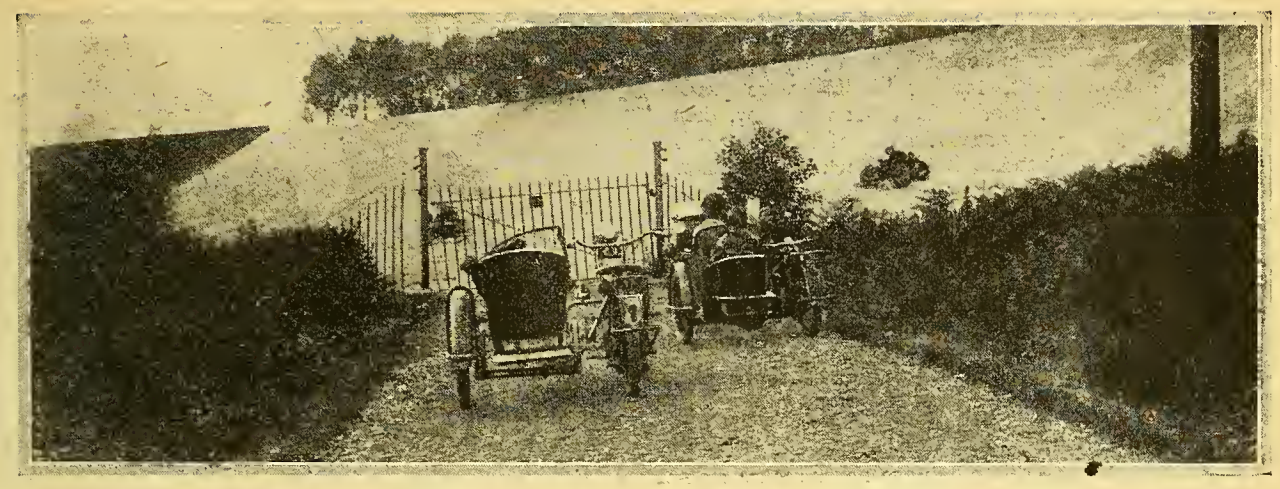
A COMBINATION of healthy exhausts, some high-pitched and screaming like great circular saws cutting pinewood, others resonant and deep-throated, booming or roaring, as the wind varied its direction. Such were the sounds on Brooklands at the recent 200-mile sidecar race.

In the paddock I watched the procession passing and repassing, and passing again—the winners actually encircling the tremendous lap 74 times. Occasionally a lame duck would be seen pushing his outfit round the distant bend. This sight would galvanise the watchers at the replenishing depôts of that particular make into instant activity, and off they would sprint to aid the disconsolate driver. Sometimes it would be plug trouble, sometimes petrol shortage, but often it was a "Blighty one" and meant complete retirement. And all the while the yellow, blue, and crimson sidecars streaked by, a roaring, screaming procession.

FOR one hour, two hours, three hours, four hours, the engines of some of the lightweights propelled at 50 miles an hour a loaded outfit—prodigious! There is no other word for it; the more I see of these prolonged tests at abnormal speeds the more I respect the engines. The mile and the short distance records at phenomenal speeds may receive greater acclaim, but these long distance tests play, unquestionably, an important part in the evolution of the motor cycle engine. I wonder if the J.A.P. experts during their great experience have found that prolonged track tests reveal more than speed bursts over short distances, or whether the test bench, so far as the engine, plugs, magneto, and gear estimating are concerned, answers just as well. Nothing, of course, can take the place of the track for a test of the complete machine, and I am inclined to think the bench never can give the necessary varying conditions that the track or road offers even for testing engines alone.

SUCH were the thoughts provoked as the procession filed by. A group of lightweights came along at what seemed a terrific speed, then a yellow sidecar—maybe Le Vack or Davidson—streaked by them with a roar, and was gone. The riders of the lightweights glanced out of the corners of their eyes at the passing 70 m.p.h. whirlwinds, and then settled down again to potter along at a comfortable 50 m.p.h. And of all that crowd one man appeared to be just a little faster than the rest. It was Le Vack steering a course round that vast amphitheatre apparently on his own particular route, for he varied his course but little.

MERITORIOUS as were the 350 c.c. and 500 c.c. outfits, one's interest was focussed on the "big ones"—on the pilots that shot like an arrow up the steep banking when passing the slower moving craft on the lower reaches below. But the most exciting instances of this nature were not for those who took their stand in the paddock, the most thrilling part of the racing was witnessed from the little branch road leading to the left just before passing under the tunnel when leaving the course.

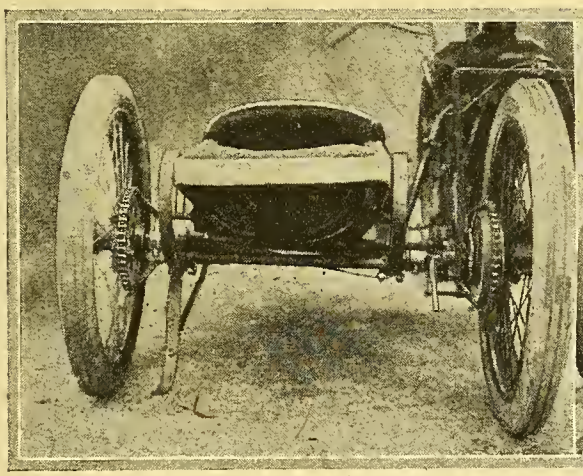


From this point the steep banking slopes down gradually to the "railway straight," and it is at this spot that the fastest speeds are made when the wind is following.

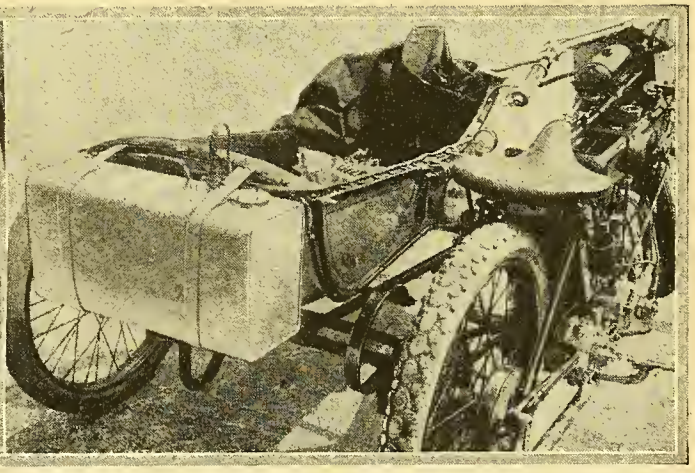
On one occasion Fenn (739 Martinsyde), Allchin (989 Harley Davidson), Davidson (998 Indian), Le Vack (998 Zenith J.A.P.), Horsman (596 Norton), Tucker (588 Norton), and two or three lightweights came from under the bridge together. The little chaps kept their low course, but Le Vack and Davidson took the lead up the steep banking, and with a roar passed Fenn and the rest of the crowd. No! Fenn drew up again, and neck and neck the three swooped down the bank. But Le Vack had most in hand, he opened the throttle a fraction and drew ahead.

FROM this spot one faces the steep banking which looks like a great wall of cement, and standing close to the iron gate leading directly on to the track, the riders are only a yard or so away. Just beyond the high banking there towers a clump of pine trees, and on the right is a cliff of sandstone—a quiet and beautiful spot—quiet, that is, except for the roar of exhausts. Here in sylvan solitude and miles away—apparently—from the bookies and the mild commotion of the paddock was the best part of the racing witnessed. Here were well staged private tussles, meaningless, true, but most interesting, and it was here on the last lap or so that the best duel of the day was witnessed. Two light-coloured sidecars came tearing along high up the banking—Le Vack and Davidson, the former several yards behind, but creeping up foot by foot. Davidson knew that it could only be "the one" as louder and louder became that inevitable roar. They were both high up on the concrete wall, surely too high for a sidecar! Neck-and-neck they raced for a yard and then the Zenith drew away, and as suddenly dropped behind, giving way to Davidson; then up came Le Vack again and swooped down the hill with a mighty rush on to the level again, with everything behind him.

THEN again, Fenn arrived with his right-handed sidecar sitting his mount more firmly than many; at his heels were two big twins gradually drawing nearer. He climbed high up the banking



In order to maintain contact with the track when passing over the bad portions, F. W. Dixon (989 c.c. Harley-Davidson) fitted a drive to his sidecar wheel from the countershaft. Observe also the skid which was required by the regulations governing the race.



Capt. L. F. Peaty, obviated frequent stoppages for petrol by fitting this big auxiliary petrol tank. The fuel was supplied to the motor cycle tank through the drain tap by a pressure pump fitted on the sidecar and worked by the passenger.

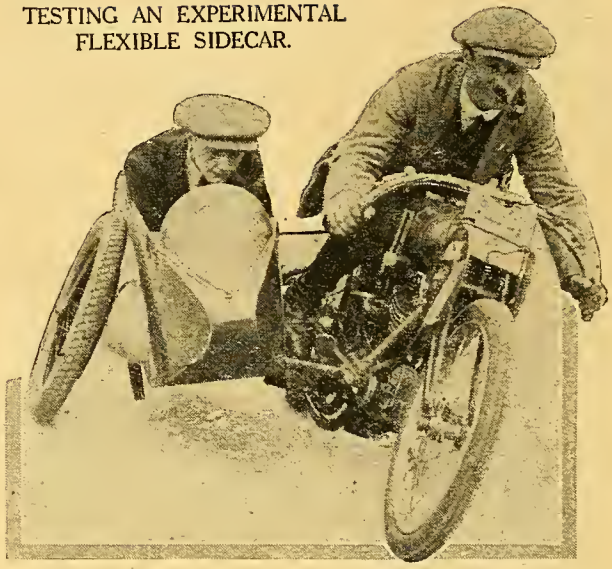
**Passenger Machine Topics.—**

until it seemed as if the sidecar must topple over, but he kept his lead and swooped at a mighty speed on to the railway straight, leaving his followers yards behind. For a moment or so the track was clear, then one or two lightweights passed, a few of the 600 c.c.'s and half-a-dozen big twins, but Le Vack was missing. Surely trouble could not have overtaken this intrepid rider once again? But fate deemed that it was to be a day of ill-luck for him, his tyre had given up. And so the race went on until the end, when the drivers, free from their mad ride, walked from their machines dazed by the sudden change from a roaring gale to a gentle summer breeze, and the passengers crawled from their cramped quarters straightening their limbs and unkeying their tensioned nerves.

◇ ◇ ◇ ◇

THOUSANDS of sidecarists have never seen a sidecar travel at 70 m.p.h., yet very few availed themselves of this opportunity. But then there is no wonder, Brooklands attractions are not meant to be popular. To charge 10s. admission for driver, passenger and machine is more than absurd. However, it is a most effective method of keeping Brooklands private and secluded—it is *such* a peaceful retreat.

TESTING AN EXPERIMENTAL FLEXIBLE SIDECAR.



A Martinsyde outfit on Brooklands track. This type of sidecar is used on the dirt tracks of America where there is no banking at the corners of the course.

It is quite easy, at the present time, to imagine Ireland an impossible country in which to tour, but such is a false estimation. Motoring, whilst not to be compared with its pre-war activity, is much in evidence. The scene depicted is in the Ballagh-Bema Pass, Co. Kerry, a district of wild grandeur.

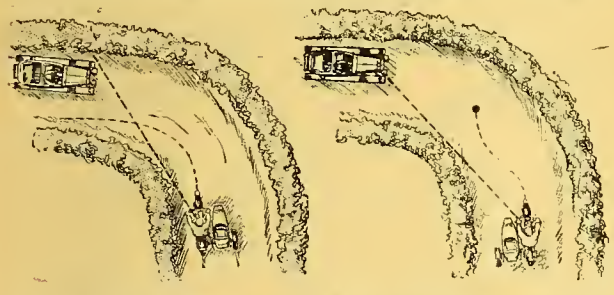
# Which Side for the Sidecar?

## Points in Favour of a Passenger Attachment on the Right-hand Side of the Machine.

THE writer has always held a strong preference for sidecars attached to the right-hand side of the motor cycle, instead of to the left, as is customary by British practice. There may be disadvantages in the right-hand sidecar, but most of them are trivial, and often a matter of personal taste, whereas the advantages are important ones. The chief reason why sidecars are fitted to the left is for the comparative safety of the passenger in case of collision, but surely the first thing to aim at is eliminating the collision!

### Left-hand Bends.

We may take it that the most dangerous turns are to the left. One cannot see round a left-hand corner without transgressing the rule of the road on approaching the bend. The wise rider, of course, does this so far as prudence permits, but if his sidecar be on the customary left hand side, he may be called upon to make a sudden swerve in order to avoid an approaching vehicle, which, possibly, he is prevented from seeing sooner owing to the fact that the other driver is slightly on his wrong side. The sudden swerve may result in the lifting of the sidecar wheel, especially if there is no passenger, and once the wheel is up all control is lost. More likely than not a collision occurs, and, moreover, it occurs in the other man's favour—that is, on his right side of the road and on your wrong side. You have to foot the bill.



On a left-hand corner the restricted vision of the driver is offset by the fact that the sudden lifting of the sidecar wheel is impossible if a sharp swerve be made to avoid oncoming traffic.

Under similar circumstances the driver of a left-hand sidecar has only a little better view and has the danger of the sidecar lifting. The dotted line shows the course taken in the latter event.

Now the man with his sidecar on the right is, admittedly, in an even worse position as regards seeing round the corner, but this disadvantage is more than counterbalanced by the fact that he can make any kind of swerve in absolute safety. Thus a slight disadvantage is offset by a big advantage. He is really the safer of the two where danger is most likely to occur.

### Turning to the Right.

So much for left-hand corners, and now as regards turning to the right.

Should the sidecar be on the right-hand side, and should it lift—the greatest danger in sidecaring—the vehicle is turned off the road instead of being thrown out of all control into the traffic. Generally speaking, it is less undesirable to run into hedges and the like than it is to run into other vehicles. Also it is cheaper. It might be added for the benefit of the uninitiated that the danger of a lifting sidecar is not so much in capsizing the vehicle as in the fact that the driver, instinctively striving to keep his sidecar wheel on the road, is forced on in more or less his original line of travel.

In spite of the fact that the camber of the road increases the tendency of a right-hand sidecar to lift in turning to the right, it is nevertheless seldom that embarrassing circumstances occur when turning in this direction, as the rider, by adhering strictly to his proper side of the road, obtains the first possible glimpse round the corner. The man whose sidecar is on the left, on the other hand, is really in greater danger of the sidecarist coming in the opposite direction. He sees him a few seconds later, and if a smash is imminent owing to the other man's sidecar lifting, he is more likely to be in the middle of it.

With the sidecar on the left the driver has a restricted and late view round the corner on right-hand bends.

On the same bend with right-hand sidecar, although the wheel may lift, the driver has an earlier view round the corner.

**Which Side for the Sidecar ?—**

Thus it will be seen that, so far as corners are concerned, the major advantage is with the man having his sidecar on the right, even though the minor disadvantages may be his lot.

**Other Points.**

Quite apart from the question of mishap, however, there are other advantages in the right-hand sidecar. Lifting does not occur when a passenger is carried, unless, of course, one is riding at an excessive and dangerous speed. It is, however, likely to occur in a sudden emergency when the sidecar is empty, and my point is that with the left-hand sidecar the effect of lifting is likely to lead to far more serious results.

In addition, chain and magneto adjustments have generally to be made at the left-hand side of the machine, and with the sidecar on that side inaccessibility is much increased. Indeed, one has to undertake most adjustments in a more or less inverted posture !

Finally—a motor cyclist was very severely injured recently and his wife killed through the sidecar wheel striking an obtrusion of the kerb on the left-hand side. The result was that the whole outfit was spun to the left, and bouncing up the kerb crashed into a stone wall. I have myself narrowly escaped one or two bad crashes, particularly at night time, through not noticing some obstruction on the kerb side, such as an out-jutting stone on the hillside, of the kind carters are supposed to make use of for resting their horses. It may be argued that moving traffic constitutes a greater danger in the unorthodox fitting, but this is not so, as one naturally watches the traffic, while obstructions on the far side easily escape notice.

H. MORTIMER BATTEN.

# LIGHT CAR *v.* MOTOR CYCLE.

## Comparing Two-Wheeler and Four-Wheeler Experiences in the Scottish Trials.

By B. H. DAVIES.

IN the course of Press duties it fell to the writer's lot to go round the Edinburgh M.C.C. Six Days on one of the most comfortable motor bicycles made (an o.h.v. Triumph), and a month later to accompany the R.S.A.C. Light Car Trials over much the same course at the wheel of a small car. A comparison of the two experiences may be of interest to some readers, and is possibly not without its lessons for designers. The weather during the two trials was by no means identical, the cycle trial being run under cold, wettish climatic conditions, whilst the small car trials enjoyed almost unbroken sunshine over dry and rather dusty roads.

So far as average speed is concerned, no comparison is possible. The motor cycle is infinitely the faster machine over such a course. Its acceleration is tremendously superior. It requires far less space and can therefore be cornered more boldly. It climbs hills almost as fast as safety permits. The car, on the other hand, picks up very slowly, must approach blind corners at a crawl, and creeps up really steep ascents. Where a high average is necessary or desirable, the motor bicycle is without a rival over difficult roads.

**Fatigue of Muscle and Mind.**

From the standpoint of fatigue, it might be thought that the motor cycle would again display an advantage. On paper it is easy to argue that the physical exertion of steering and braking a cycle is less than the corresponding effort which a car imposes. Similarly, it might be thought that the mental concentration of handling a broad vehicle over narrow and dangerous roads would prove very exacting. Actually, although the total mileage of the car trials considerably exceeded that of the cycle event, taking a car over the course is a positive picnic to any rider accustomed to drive a bicycle. After a comparatively short day on the motor cycle, it is a relief to dismount and to feel that driving is over for the day, whereas a longer day at the helm of a car over the same roads engenders no perceptible fatigue of muscle or mind. Endeavouring to analyse this contrast, two factors stand out quite decidedly. The first is that on the good main roads and the gritty moor tracks of which the Scottish course is compounded, sideslip is practically unknown with a car, whereas in bad weather it is an ever-present peril with a motor bicycle. The second is that the rider is far better insulated from road shock on a car of ordinary suspension than he is on one of our most comfortable motor bicycles.

Finally, of course, there is a contrast in economy. The upkeep of a solo motor cycle for a thousand miles is trivial. Such a week leaves no real mark on the tyres. The petrol replenishments are a matter of a shilling or two. The sole impression of expense which such a week leaves is due to the hotel bills. With a car, even if no covers are destroyed, no tubes burst, no springs are broken, the week feels costly from start to finish. The daily replenishment at a garage leaves little, if any, change out of a pound note. And this contrast is emblematical of similar differences in the overhead charges—depreciation, insurance, wear and tear, and the like.

So the motor cycle scores on the grounds of superior speed and economy. But until motor cycles become more comfortable and require less "holding up," the car makes far less demand on the rider's physique.

NEXT WEEK.

THURSDAY. JULY 6th.

# ON A NEW DEVONSHIRE HILL.

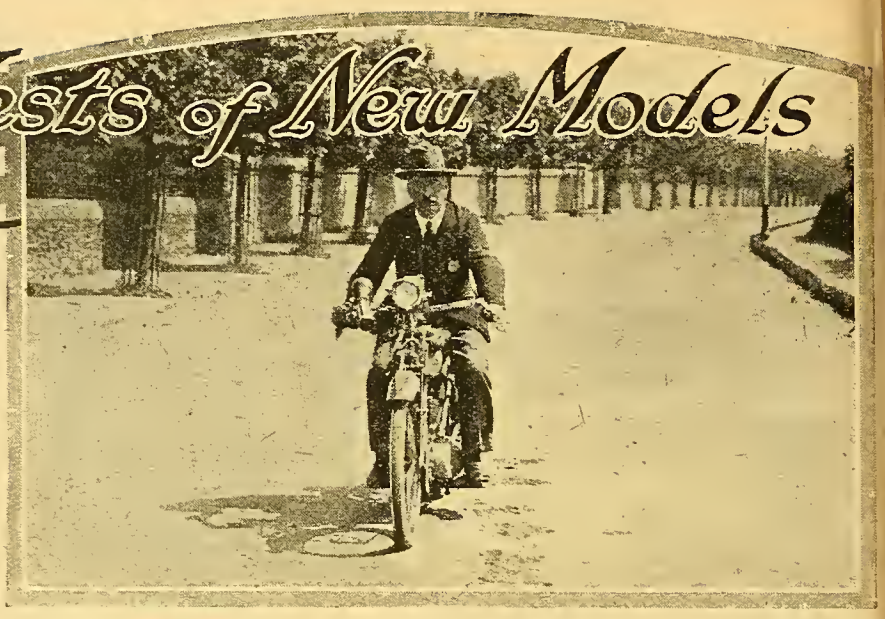
## A Gradient Discovered which is Claimed to be Steeper than Beggar's Roost.

BEGGAR'S ROOST has been considered to be Devon's steepest hill, with its gradient of 3.6 to 1 on a small section, but the discovery by Exeter motorists of Sim's Hill, Islington, seems to oust the Roost from the premier position. The new discovery is not a by-road or one in occasional use on a farm, but an old main road running to Ashburton from Hey Tor. Its surface is extremely good when the gradient of 2.8 is taken into consideration. (This, by the by, is the approximate gradient of the entire hill, not a small section.)

The hill is approached from the village of Islington; at the foot is an acute right-hand bend, and then the steep portion, some 500 yards, is enconntered. It is narrow, and like many of the Devonshire roads, has high wooded banks at either side, but it was climbed by Triumph and Norton sidecar machines. In fact, both made the ascent with three up. What proved a problem was the difficulty in getting the machines down again, and resort was made to a rope on which six or more people hung.

(1) A Triumph rider making a good ascent of Sim's Hill, Islington, Devon. (2) Taking no chances with the Norton sidecar. (3) Ladies preventing the too swift descent of Man. (4) A spectacular ascent by a Triumph sidecar.

# Road Tests of New Models



## The 349 c.c. Royal Ruby.

TAKING a machine to the Isle of Man for the Tourist Trophy races, as was done with the 349 c.c. Royal Ruby under review, involves a far more thorough test than can ordinarily be given a machine submitted for editorial approval. First comes the 180 mile journey to Liverpool, and then nearly a week's strenuous riding in the island—probably amounting to 300 miles in all.

Delivered brand new, the machine was collected at Euston, then divested of its wrappings and heavy coating of vaseline, filled with petrol at a neighbouring garage and the kick-starter vigorously and, we regret to say, fruitlessly applied. Finally we discovered that the high tension wire had been torn from the magneto in transport, and once this was replaced the first trip of 25 miles was accomplished without incident; the flexibility of the semi-automatic carburetter was all that could be desired, and the power and acceleration quite remarkable for so small an engine.

*SPECIFICATION.*

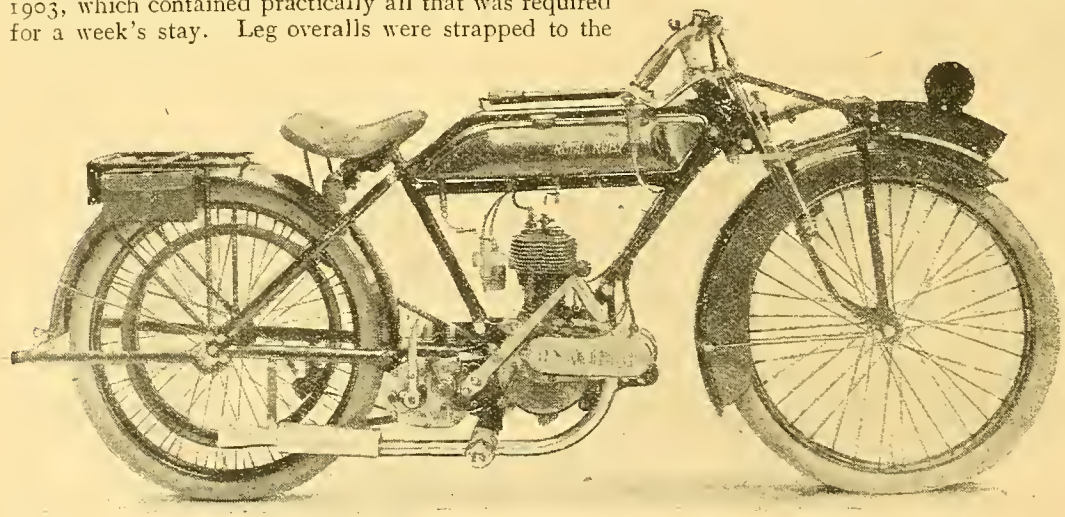
*ENGINE: Royal Ruby, single, four-stroke, 74·5 × 80 m.m.; side by side valves.*
*GEAR: Royal Ruby 3-speed clutch and kick-starter.*
*TRANSMISSION: chain and belt.*
*TYRES: 26 × 2¼in.*
*CARBURETTER: two-lever semi-automatic.*
*FORKS: Royal Ruby.*
*PRICE: £70.*

### The Run to Liverpool.

Another feature of our road test was the carrying of luggage, as the little mount had to carry an old and favourite bag first initiated to the joys of motoring in 1903, which contained practically all that was required for a week's stay. Leg overalls were strapped to the top tube, as the weather was warm and they were only for use in rain.

The first 20 miles of the journey were not particularly successful, as one of those runs of bad luck ensued which befalls us all at some time or other. Stoppage in the petrol supply occurred before 7 miles had been covered, which involved half-an-hour's delay. This entailed clearing not only the petrol pipe, but the tap, which had to be detached from the tank and cleaned with one finger blocking the tank orifice. Why this did not happen in the 25 miles of the previous day is difficult to understand. At last we re-started, but the obstruction had been only partially removed, as the air had to be kept closed all the

Passing through Hemel Hempstead the machine suddenly shot ahead, the air lever was shoved wide open and mentally we shouted for joy that all was clear. But, alas! we shouted too



A well-tried lightweight built throughout in one works, the 349 c.c. four-stroke Royal Ruby.

**Road Tests of New Models.—**

soon. Mounting a steep hill on the way to a friend's house, we were suddenly bumped in the air and landed on the ground with the sickening thud which proclaims a deflated tyre. Our friend's house was almost in sight, and as he possessed a large motor house, a tiled yard, and a chauffeur, we pushed on and on up a 1 in 20 grade until the lightweight seemed to turn the scale at the same point as a big twin. Investigation showed that a flint had penetrated the cover once and the tube twice. However, the John Bull outfit's largest patch carefully applied made a satisfactory repair, and we restarted at least 1h. 20m. behind schedule, accompanied by our friend on his two-seater car.

### A Swift Means of Transport.

The route lay through Tring, Aylesbury, and Bicester. The Royal Ruby clearly "had the legs" of our friend's small car which followed it. After Bicester we passed through Aynho and Banbury up to the summit of the Edge hills, down Sunrising, and on to Stratford-on-Avon, Alcester and Kidderminster. After the latter town two good main road hills are encountered which were special observation points in one of the early A.C.U. Six Days' Trials. These were successfully surmounted on top. Remarkably pretty country was traversed on approaching Bridgnorth and the quaint village of Quatford, approached through a cutting in the rocks, will long be remembered. The roads were not altogether ideal, but much good work was being done to improve them. Passing through Whitchurch we made for Chester, and there stayed the night.

Leaving early next morning we made for Birkenhead, and nearing there were overhauled by a colleague who had left Kenilworth in the early hours of the morning. We both caught the ferry comfortably from Birkenhead, and shipped our machines on the *Mona's Isle* with no trouble.

### Serious Work in the Island.

During our stay on the island the machine was used as a hack and for serious work in viewing the T.T. at different points. This entailed climbing mountain paths strewn with boulders, and as bad as any found in a Scottish Six Days, in dodging up rough by-roads and in getting from place to place as quickly as possible. On not one single occasion did the machine fail to do its duty.

Now as regards the machine itself, we were particularly pleased to find that the engine was really oiltight. During the ten days it was in our possession leg overalls were not worn, and during the last week hardly a trace of oil was to be found on a pair of new grey flannel trousers. This is an exceedingly important feature, as no one wishes to wear extra leg coverings in such heat as was experienced during the latter part of May and the early part of June. The engine developed plenty of power, was reasonably flexible, and controllable in the densest traffic.

### Points of Criticism.

So far as points of criticism are concerned, both tool-bags and carrier were on the small side, the carrier only being just able to accommodate our luggage, which, however, it must be mentioned, was on the generous side. It is a pity also that the tool roll was too large for the tool-bag, and considerable effort had to be exerted to insert it. It was also very hard to find accommodation for all the necessities required on tour, and when the machine was delivered certain important parts of the repair outfit were not packed in the tool-bags.

Some improvement is necessary in both brakes. The stopping powers of the front brake were negligible, and those of the rear brake none too good, and also the latter had to be entirely removed when the rear wheel had to be withdrawn—this being necessary owing to the damaged tyre previously referred to.

## REAR LIGHTS ON VEHICLES.

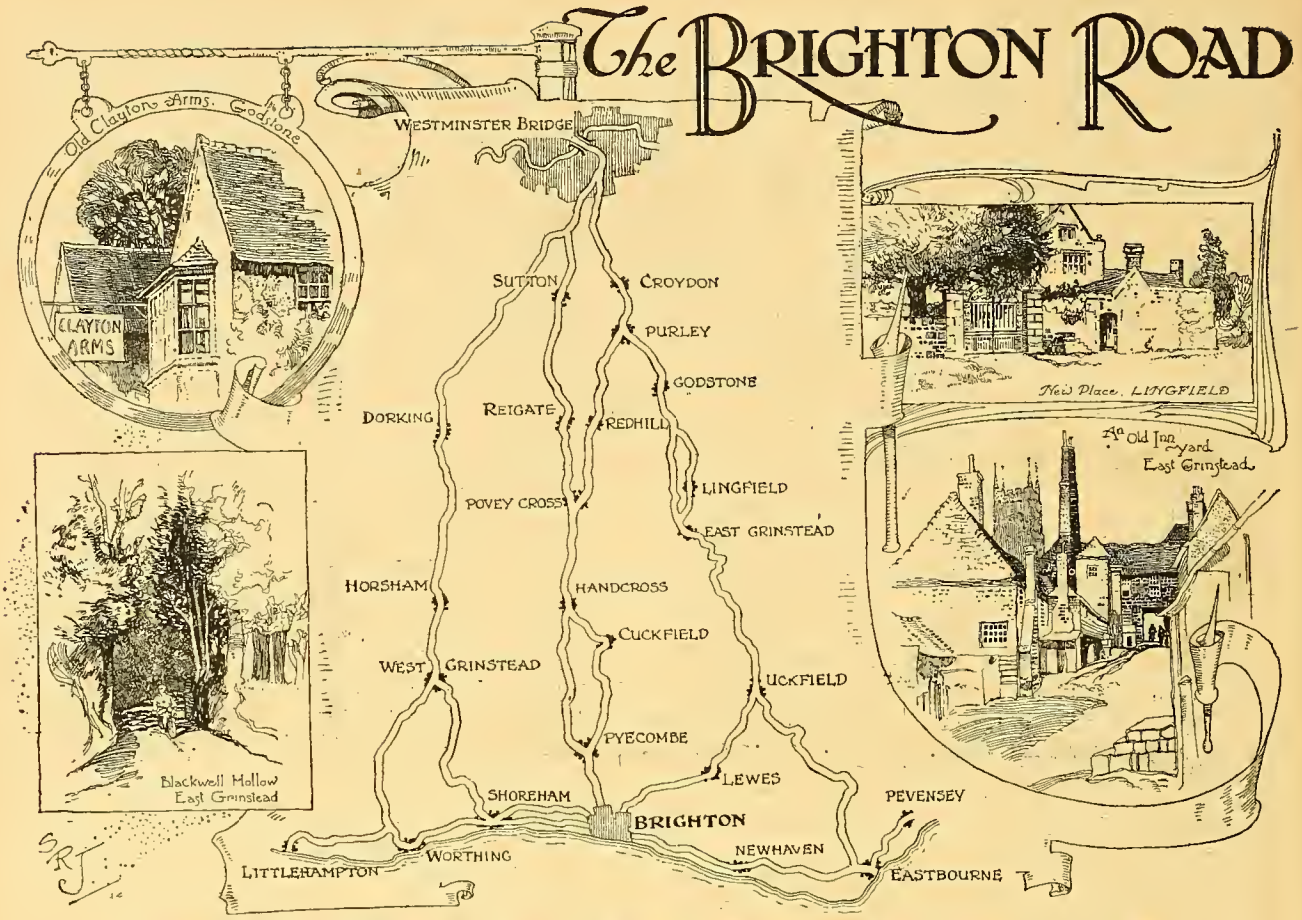
RECENTLY in the House of Commons Mr. T. Thomson asked the Parliamentary Secretary to the Ministry of Transport whether he was aware that since the committee on lights on vehicles reported considerable improvements had been and were still being effected in reflectors and similar mechanical catch-light devices; and whether, before introducing any Bill amending the law on lights on road vehicles, he would further investigate the efficiency of these methods of protection as compared with the best rear lamps, which experience showed were difficult to keep alight on certain classes of roads.

Mr. Neal said that he should be happy to instruct a technical officer to attend a demonstration of any new reflectors and similar mechanical catch-light devices which it might be desired to bring to his notice. A reply to this effect had been addressed to a letter from the National Cyclists' Union, dated January 30th last, but at present no proposal for any such demonstration had been received from them.

## THE PARIS-PYRENEES TRIAL.

THREE competitors riding, respectively, a solo machine, a sidecar and a cycle car, alone succeeded in going through the reliability trials from Paris to the Pyrenees and returning without the loss of a single mark. They were Ring (557 B.S.A.), Sigrand (1,000 D.S. sc.) and De Belleville (Derby cycle car). Ring, who is a B.S.A. agent in Alsace, punctured about 20 miles from home and finished on the rim. Owing to there being snow on the mountains, the event had to be postponed, and the change of date caused several competitors to drop out. There were only seventeen starters, of whom nine were on motor cycles or sidecars and eight on cycle cars. Of this group eleven returned to Paris; they comprised six solo machines or sidecar combinations and five cycle cars. In addition to Ring on the B.S.A., Vattier (499 B.S.A.) finished with a loss of 28 points and Berrenger (557 B.S.A.) lost 107 points.

# The BRIGHTON ROAD



## Records of long ago on Foot, Horse, Velocipede, and Steam Carriage.

OF route-books, helping the driver to find his way, there are many; and the local guide has been written for every part of England. But none of these served the same purpose as the Motor-Coach Shilling Route Books issued by our sister journal, *Motor Transport*.

These little handbooks have been designed primarily for the ever-increasing number of persons who enjoy their motoring in a modern motor coach, but secondly they serve as a guide to all who use the roads.

One volume is devoted to the various roads to Brighton, regarding which the author says:—

One always speaks of "The Brighton Road" as if there were but one, but actually there are several roads to Brighton. Probably the one most spoken of as "THE" Brighton Road is that through Redhill, which is actually the shortest, though not by far the most picturesque. But even this road is not one and undivided; many prefer to use the older loop in Sussex and go through Cuckfield. A third alternative section is the road through Sutton and Reigate, joining the first at Povey Cross.

All these really count as variants of the Brighton Road; but there are two other roads, often called the "Worthing" and the "Eastbourne" Roads, both of which lead to Brighton by short branches.

Sporting records have ever been made between London and Brighton. The very first of them was on July 25th, 1784, when the then Prince of Wales, afterwards King George the Fourth, rode horseback from his new Marine Palace, the Pavilion, to his residence at Carlton House, London, and back again. We have the time in which he made this performance: 4h. 30m. going, 5h. 30m. returning. The earliest coaching record was that of June 19th, 1831, when the "Red Rover" coach, leaving the "Elephant and Castle" at 4 p.m., reached Brighton at 8.31: time, 4h. 31m. In 1834 this feat was beaten, and the record then set up has never since been equalled by coach: on February 4th the "Criterion" coach took the King's Speech down from London to Brighton in 3h. 40m.

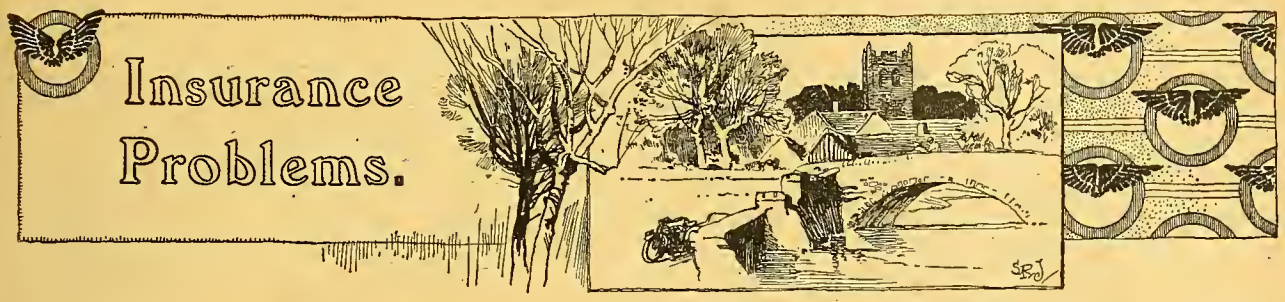
### Some Other Records.

In October, 1833, Walter Hancock ran his "Autopsy" steam carriage to Brighton in 8h. 30m. A "record," one may exclaim, "in a record long time!" But wait a while, we have to deduct three hours for his being obliged to halt that time on the road.

Cyclists have had a special fury after record making and breaking on the Brighton Road. The first of them, the Old Master, so to speak, was John Mayall, junior, who on February 17th, 1869, rode a velocipede from Trafalgar Square to Brighton in "about" twelve hours. On March 6th of the same year W. M. and H. J. Chinnery walked to Brighton in 11h. 25m. The latest of the many organised walks was that of April 29th, 1922, when there were nineteen competitors, the best performance being that of H. B. S. Rhodes in 9h. 13m. 55s.

Mayall's initial velocipede ride was followed in that same year of 1869, on April 14th, by C. A. Booth, who got down to Brighton on a machine of the same description in 9h. 30m. On September 19th, 1872, came the first amateur bicycle club's race, won by A. Temple, on the then new 44in. bicycle, in 5h. 25m.

It would be a long story to tell all these struggles, which went on for years. The present Brighton and back unpaced bicycle record is that by T. H. Grubb, 5h. 9m. 41s., June 19th, 1912.



## A New Feature in which Insurance Questions are Answered and Discussed.

*It is now generally accepted that insurance is a vital necessity in the case of every motor cyclist. The number of communications received on insurance matters, too, indicates that readers are very keenly interested in this subject; some of the questions require expert advice, and this new feature has been formed to deal impartially with the various problems that are presented to us.*

*The close associations of "The Motor Cycle" and our sister journal, "The Autocar," with the Autocar Fire and Accident Insurance Co., Ltd. (a company evolved from the old Autocar Insurance Department, founded 18 years ago) enables "The Motor Cycle" to keep in very close touch with all matters pertaining to insurance—an undoubted advantage to our readers.*

*Enquiries will be welcomed and should be marked "Insurance" on the left-hand corner of the envelope and addressed to "The Motor Cycle," Dorset House, Tudor Street, E.C.4.*

**A Boundary Hit and Broken Spokes.** "Sportsman" asked last week if an insurance company should make good damage to a motor cycle sustained at a cricket match whilst the machine was parked near the boundary line.

This is a long question which can be answered in a few words. It is not within our knowledge that any company issues policies using terms "Accidental damage whilst on the road under ordinary riding conditions." We do not say that no company has ever done it, but if they have they are certainly a company to avoid. Accidents of the nature indicated by your correspondent would most certainly come within the scope of the accidental damage section of the policies issued by any reputable company.

* * * *

**After Twelve Months' Wear.** Mr. C. Canthall, Croydon, asks what amount an insurance company would pay on a machine insured for £100 in January and stolen in December after twelve months' running.

The question of the value stated in the form of proposal, or in the policy when issued, is for purpose of guidance only, the determining fact at the time of loss being present market value.

* * * *

**Presuming Non-recovery.** Immediately a motor cycle is stolen the very first question the owner asks, and quite reasonably too, is, how long will it be before he can replace the machine. Mr. W. Wilkinson, of Liverpool, sends us the query: "How long after the theft of a motor cycle is an insurance company entited to wait before the machine is presumed to be irrecoverable and the company pays the claim?"

The reply here is that generally the insurance companies act according to circumstances. It is usually possible to ascertain in the course of two to four weeks whether a recovery is likely to be made of a stolen machine.

It occurs in some cases that clues are obtained which involve some difficulty in following up, and until the possibility of recovery is exhausted, naturally the company withholds payment. Generally speaking, four weeks is ample time in which to ascertain a definite position.

* * * *

**Physical Disabilities.** An owner of Douglas sidecar outfit writes: "I have been refused a policy by a well-known company owing to the fact that my leg has been amputated. The controls of my motor cycle are easy to operate and are most effective; the tone of the company's letter, too, was objectionable and independent to a degree. They did not even offer to accept me at a higher premium. Do all companies object to insuring disabled men?"

A great deal of sympathy is due to the disabled man desiring to insure, and the difficulty arises how to accord that sympathy which will, from the insurance company's standpoint, keep the risk on the basis of fair insurable hazard. The attitude of the Autocar Fire and Accident Insurance Company is to accord sympathetic consideration to each case and deal with the insured equitably. Where the degree of disability is of a minor nature, or such, even if of a major nature, as not to increase unduly the hazard, they generally agree to grant policies, subject to the insured bearing, say, a small portion of each claim arising under the accidental damage and third party sections. This would appear to be the only solution possible. It will be appreciated that there is a possibility of the degree of disability being such as to make the proposition quite impossible from an insurance company's standpoint.

## FILING TEMPERED STEEL.

TAKE an old file (a smooth or second-cut is best). Put on it some thick grease and dip it in a tin of fine carborundum powder. The file so charged will bite dead hard steel, and ordinary tempered steel it will take down at a very fair speed.

If it is desired to re-colour the steel, support it on a piece of thin iron plate over a bunsen flame, having first removed all trace of grease (*e.g.*, with petrol), and taking care to avoid fingering it. Stop just before the original colour is reached, and let it cool in the air.

# THE BONUS BUGBEAR.

## Opinions of Chain and Tyre Manufacturers and those of a Private Owner. A Unique Scheme for Awarding Marks.

IN our issue for June 15th we gave some particulars of the very unsatisfactory measures adopted in the Isle of Man in connection with bonuses and subsidies paid to riders by manufacturers of accessories.

As we anticipated, our remarks have aroused great interest in the pernicious bartering which threatens to undermine the present high position motor cycle racing holds in the sporting world. We pointed out that there was a danger that in future races the question of bonus might weigh more with the rider than the quality or suitability of the equipment used.

Several letters have now been received which endorse the sentiments expressed in our article. Below we give a selection of these.

### A Tyre Firm's View.

"The pernicious bartering was certainly more in evidence this year," writes Mr. Jack Randle, the competitions manager for the Leicester Rubber Co. "Speaking on behalf of my firm, who stood aloof from all matters of bonus simply because they had spent a great deal of time and money in producing a specially designed tyre for tourist trophy work, I think that the time has come when either the British Cycle and Motor Cycle Manufacturers and Traders' Union, Ltd., or the Auto Cycle Union, should take a firm stand against what is unquestionably a deterrent against the sport of motor cycling and the best interests of the motor cycle tyre trade.

"At present, as your article ably points out, it is merely a question of the largest purse which shall get the best results—quality, the obvious deciding factor, is not allowed to play its part.

"Some assistance to the winner of these events is obviously due, but when such actions take place as they did in the Island this year and offers made reach such senseless proportions, it is time some standard rate of bonus was instituted, and no firm allowed to exceed this figure under penalty. Then we should see tyres fitted to machines entirely on their merits, which after all is the whole essence of the need for the Tourist Trophy Races.

"Might I, with your permission, congratulate the number of motor cycle tyre manufacturers who disassociated themselves from the hectic bidding and counter-bidding, and express the hope that they will join hands with us in an endeavour to get the matter brought on a normal level, and enter into competition with the watchword not 'Money First' but 'Quality First.'"

### From a Famous Chain House.

The following letter has been received from Mr. H. M. Andrew, the technical manager of Hans Renold, Ltd.:

"As you specifically mention chains in the general indictment, we venture to ask of your courtesy sufficient space to make it clear that the chain makers cannot by any possibility be classed as offenders in this matter.

"We have been strongly recommended by officials of the A.C.U. to give more publicity to our particular scheme of awards, as they are good enough to say that they entirely approve of them, and this seems to us to be a suitable opportunity of giving a little explanation of the 'Renold' award scheme.

"The object of the scheme is to support the invaluable work of the A.C.U. in developing the motor cycle on suitable lines as a touring machine, and we feel that awards of this kind, of which the primary object is to encourage the use of accessories under proper conditions, can only be of benefit to the community as a whole.

"The scheme does not confine itself to the winner of the race, nor to the rider of the machine, *nor to the particular make of chain employed*. It is an award made to the manufacturer of the machine according to the degree of attention such manufacturer has given to those requirements essential for securing the best practice in the chain drive.

"The method of operating the scheme is to make a full examination of the chain drive on the machines as entered for the actual race and award each machine a certain number of marks based on the number of teeth in the chain wheels employed, the method and degree of lubrication, and the existence, or otherwise, of cranked links. The marks for the wheel teeth increase with the number of teeth employed, and the relative classes of lubrication are awarded marks in the order of their value. No award is made unless the entrant obtains at least 250 marks, and the award is confined to gold medal winners, the amount awarded being £1 per 25 marks, which worked out this year at from £10 minimum to £21 maximum per machine. The only distinction we make as regards the winning machine is that its award is doubled.

"It will be seen that this scheme is a direct incentive to the manufacturer to embody in his machine those features which we, as experts, consider are essential to the proper development of chain transmission, and the scheme is more than justified when it is considered that some valuable applications have been lost to chain driving not because the method of transmission was wrong but solely because of the trouble caused by improper application and use.

How the Hans Renold Co. awarded Marks in their Bonus Scheme for the 1922 T.T.

A Kendal motor cyclist signing himself "Interested" writes:

"I was pleased to see the article commenting on the 'Bonus and Subsidy scandals' in connection with the T.T. What is wanted is the elimination of the bartering, of which everyone connected with the trade is fully aware, at the same time assuring successful competitors of substantial monetary rewards. I would suggest that the A.C.U. makes a rule that no monetary or other prize be offered to competitors by accessory firms, except through the A.C.U., the amounts or value of such prizes to be notified to that body at least fourteen days before the race."

## *THE HARE THAT JUMPED.*

Sir,—Referring to the above incident reported in last week's issue of *The Motor Cycle* by Mr. W. A. Fell-Smith, whom I had the pleasure of accompanying as the passenger he mentions, I would like to state that, extraordinary as the accident may appear to be, it is hard fact. Personally, I found it such a very hard one and, driven into my face with so unexpected and considerable force, it was impossible for me to argue or withstand it.

It has struck me on many occasions (not the hare) that a man will expend a considerable amount purchasing the bus of his choice, but when it comes to buying the goggles a low-priced pair of rubber and glass is deemed good enough. Surely the wonderful gift of sight is so valuable, particularly to our younger "brethren of the road" who have all their life before them, with all the consequent joys of many years of motor cycling, that the choice of goggles, it would be thought, would be as important as the bus, if not more so. Even in the mildest of crashes there is always the very grave danger of glass goggles imperilling the sight by becoming broken and splintered. It is worth consideration, and I bring this point of equipment forward, as the accident which befel me would have left me a blind man to-day had I been wearing the ordinary glass goggles. Mr. Fell-Smith and those who have seen the ones I was wearing, are firmly convinced that it is solely due to the fact of their being Triplex that I retain my sight, and as a measure of gratitude that I still retain full vision I felt I could not do less than utter a warning word to all motor cyclists to take proper precautions in this part of their outfit.

May I trespass a little further in order to record my appreciation of the very efficient services rendered by Patrol Bull of the A.A.? (With Hares and Bulls running about I cannot agree that the run was monotonous.) He seemed to arrive on the scene in a most miraculous way—perhaps he also jumped—and examined my eyes in a most careful and capable manner for broken glass, and gave us all the help possible under the circumstances.

Tae the kindly Scots leddy wha produced the whisky Ah wud also tender ma verra sincere thanks—twice ower—aince for the first drink that brocht me round and again for the second which by then Ah was in ma richt senses tae enjoy. Aye, it was guid.

GEO. TEMPLE.

Sir,—Seeing your article on the above I thought my experience of May 31st, 1922, might be of interest.

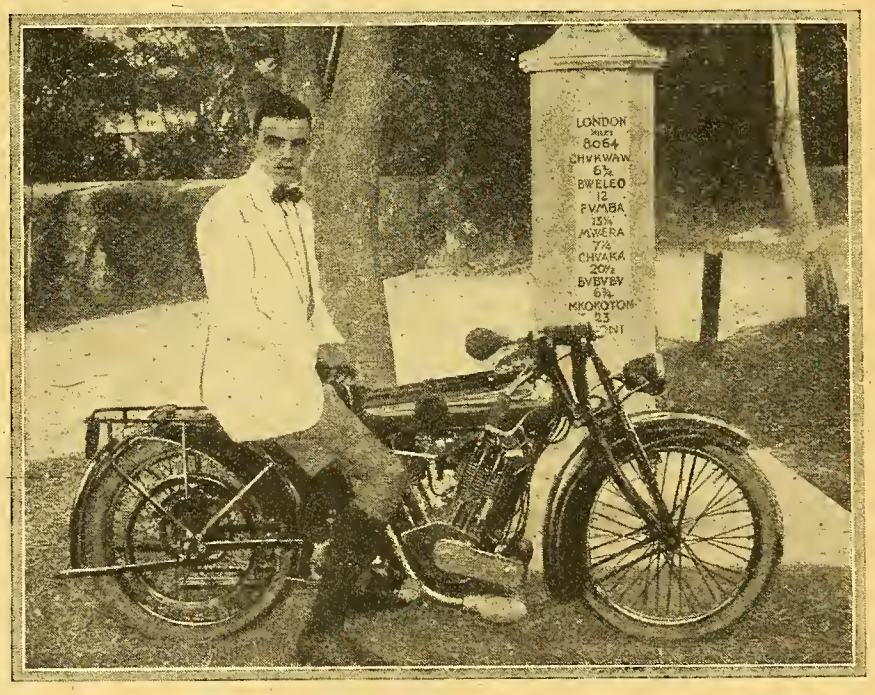
Returning home from Hunstanton on my James outfit, and on taking a hill at about 30 miles per hour, a hare suddenly appeared from the fence in front on the motor side of the outfit. Finding that it could not clear the machine it tried to jump it, and succeeded. Passing between myself and the lamp set, it struck the top of the sidecar windscreen, bending the metal beading and leaving a lock of its fur on the screen screws. Needless to say, my passenger's nerves were a bit upset for a few minutes, and I must confess I felt a bit queer for a time.

We turned back to see if the hare was damaged, but evidently no vital parts were hurt, as Sally was gone.

J. CLIFFORD THOMPSON.

Sir,—I think I can equal, or even better, the incident described by Mr. Fell-Smith.

On April 29th last my twelve-year-old son and myself were returning from Sutton Bank hill climb via Thirsk, and



A rider of a 976 c.c. Brough Superior in Zanzibar, who speaks in high praise of his mount, eulogizing both its speed capabilities and comfort. An interesting point about the milestone is that it gives London 8,064 miles. What an adventure to ride to London by motor cycle, touching the sea only in crossing to the mainland, at the Suez Canal and the Dover Straits.

Until quite recently screens on sidecars used in America were in the minority, but the advent of the Easting in that country will no doubt mark the commencement of greater appreciation of the unquestioned comfort a screen affords. A Henderson owner with a fully equipped outfit.

as is usual, there was some chasing one another to get clear of the front man's dust. We were travelling about 20 m.p.h. when a black hen came out of a gateway on our left, and made across our track. Without warning it rose into the air and made as if to fly over us, then disappeared. I feared that it had got into the sidecar wheel when, to my surprise, it flew out of the sidecar amidst a shower of feathers. What really had occurred was that I had hit the hen first as it was passing the windscreen, and my speed had caused it to crash through the celluloid screen into my boy's face, and it dropped into his lap. The impact had evidently not killed it. Luckily the screen was not glass. We were like the men with the hare—we were disappointed that we did not secure a Sunday dinner on the cheap.

R. T. SWIFT.

## A SCIENTIFIC LAYMAN CRITICISES.

Sir,—Having followed the profession of chemistry for a good many years, I read with interest the article written by "Kemist" and published by you last week.

As regards the metallic part of the question, I think he is perfectly correct in saying, well—(in a nutshell)—"Prevention is better than cure."

I once pointed out to a representative of a very well-known oil firm the formation of these fatty acids and the probable liberation of water, and the detrimental properties to the metals to which they come into contact. He said very little, probably he didn't understand, or perhaps he agreed. At the same time, when we drained castor oil from my crankcase it has been castor oil through and through, and no watery fluid whatsoever, as far as my eye could detect. Also, the users of "Castrol R" in the T.T. Before they have completed a circuit of 37 miles the oil should be hot enough to have undergone this chemical change.

Why, in this case, does it lubricate?

The oil is of practically uniform temperature, and each molecule of it is as liable to chemical change as the next one, therefore, why not empty H.COOH into the oil chamber and save the engine the trouble of converting the oil expressed from *Ricinus Communis* into this.

If, of course, the engine is driven in the correct manner for manufacturing these acids and chemicals generally, we shall be very much surprised, on draining the crankcase, to find crystals of oxalic acid, which in formulae is very close to formic acid.

Perhaps "Kemist" would some time mention if the change is chemical or physical. Because, if castor oil is used (pure) and fatty acids are formed to the maximum degree, do they re-dissolve in the remaining 100 per cent. oil on cooling, so as to avoid being detected on inspection?

Having turned over a few pages of the same issue, I see Castrol has been mentioned for its efficiency, and has been used by the winners of the T.T. race for years and years (and it is used by many other speedmen too).

I should think the "Castrol" firm have in their employment chemists who pass their opinion on the subject, and surely no firm would sell formic acid as an oil indirectly.

I suppose if castor oil could be thrown out, prior to its reaching the temperature of changing chemically, it would be absolutely perfect as a lubricant, as in aero-engines.

Doncaster. METALLIC.

Sir,—In an article in your issue of June 15th under the title "A Scientific Layman Criticises," one is given to understand that castor oil, or oil containing castor, is inferior to mineral oil as a lubricant. That being so, it would be interesting to hear the views of manufacturers who market such an oil for racing purposes. Castrol "R" and Speedwell "White Ideal" are both of vegetable nature; surely these oils do not possess all the disadvantages named by your contributor. ARTHUR S. COOK.

Sir,—Your correspondent "Kemist" commences and concludes his article with marks of interrogation, a sign which leads one to suppose that his criticisms are not criticisms at all, but a subtle way of interesting his readers in a subject which has created much discussion of recent years, and which has been settled in no indefinite way by experts of proved ability in the motor racing world. One cannot believe that a scientific layman would be so dogmatic as to say that castor oil is not only a poor lubricant, quite unfitted for internal combustion engines, but is extremely detrimental, in view of the overwhelming evidence in its favour.

Flights to Australia and across the Atlantic have been made using Castrol "R," an oil which contains a large proportion of castor oil, and not a small percentage, as suggested; it has enabled records to be beaten and races to be won. The ever present smell of castor oil at all motor race meetings proves that it has gained a popularity over pure mineral oils which will not readily be eclipsed. Not only is it used in the racing engines where the very last unit of energy is extracted from the engine, and where it is important that the piston should not be corroded right away or the bearings wholly disappear before the race is finished, but upon the touring cars, which on such occasions often have their strength taxed to the uttermost, and change their oil after several thousand miles running.

I have seen drums of castor oil which have stood several years untouched, but still they are quite sound and no corrosion is apparent. One ventures to suggest that the castor oil which Kemist had examined had the "blues" and was anxious to part with them.

True, many people imagine that castor oil is one of the most viscous oils—so it is as far as motor oils are concerned. If one endeavoured to use an oil whose viscosity were greater than castor oil at a temperature of 140° F. or 200° F., it would be very thick indeed at atmosphere

temperature, so thick, in fact, that in cold weather it would not flow and in warm weather would offer serious resistance to the moving parts of the engine until the oil had become hot, a resistance which would prove fatal to the racing man. But viscosity is not a direct measure of the lubricating value of an oil, and cannot therefore be relied upon as the only guide. To deal with the obscure advantages of castor oil is a lengthy, highly scientific subject.

C. C. WAKEFIELD & CO., LTD.,
E. A. EVANS, *Chemist.*

### *LIGHTWEIGHT TWO-STROKES FOR LONG DISTANCE TOURING.*

Sir,—I have noticed, in your recent issues, riders' remarks on the performance of lightweight two-stroke machines; and since there seems to be some doubt as to the suitability of lightweight two-strokes for long-distance touring, I would like to give particulars as to the performance of a real ultra lightweight machine, viz., the 1¾ h.p. J.E.S., which, as you know, has a cubical capacity of 169 c.c. only, and we think that the performances of these tiny machines should leave no question as to their suitability for long distance touring.

On December 31st last the London-Gloucester-London Reliability Trial took place. A J.E.S. was driven from Gloucester to London, a distance of 115 miles; on the next day was driven from London to Gloucester and back, over a route of 130 miles, completed the course within the scheduled time, and on the next day was driven back to Gloucester.

Then, again, in the recent London-Edinburgh run, a 1¾ h.p. J.E.S. was driven from Gloucester to Hendon, and in the evening at 7.20 p.m. left Hendon for Edinburgh, arriving there dead on scheduled time, having checked in at each section exactly to time; not one second's trouble of any sort was experienced. The machine was driven next day into Kilmarnock and then back to Gloucester, a distance altogether of well over 1,000 miles, and without the slightest trouble.

Just one other instance of the capabilities of the modern small two-stroke. In a freak trial recently held over the Cotswold Hills, which included the most freakish hills that could be found, one of these little machines succeeded in completing the course according to schedule, very much to the surprise of all the competitors. As a matter of fact, not one of them expected the machine ever to get through the course. However, it not only succeeded in doing this, but succeeded in obtaining a silver medal, together with a gold centre medal, for the second best performance of the run.

J. E. SMITH.

Sir,—I do not think that there is anything in the least remarkable in touring long distances on lightweight two-strokes. By taking adequate time for meals it is neither tiring nor difficult to do 300 miles in a day. Twice I have ridden from the Midlands to Edinburgh between sunrise and sunset, once on a 220 c.c. Velocette (distance 325 miles, time 15½ hours, less 3 hours for meals), the second time on a 249 c.c. Velocette (distance 320 miles, time 14 hours less 2 hours 10 minutes for meals). On the 220 c.c. machine I rode a total of 1,285 miles in eight successive days.

Nuneaton. "63×80."

Sir,—I have observed recently in your columns discussion as to the demerits of the lightweight two-strokes as a potterbus; but really, why they are held up to ridicule by a certain section of motor cyclists I fail to appreciate. One must admit that modern two-strokes are remarkably reliable, and whilst I continue to ride solo I should never think of procuring any other grade of motor cycle. True, they have disadvantages, combined with advantages, over four-strokes, but I certainly can boast of some remarkably fine rides on my 2¼ h.p. De Luxe sports model New Hudson. In the course of three to four thousand miles' riding I have never had a suggestion of a breakdown, except for adjustments, and since using a "K.L.G." H.S.1 plug I have never had a case of overheating, although I am constantly averaging over 20 m.p.h. over fairly lengthy journeys. Recently I went from Finchley to Brighton, 60 miles, in 2½ hours.

I should certainly recommend two-stroke riders to make use of Castrol "C" oil and "K.L.G." H.S.1 plugs. I can hardly explain the improved running on my machine since using them.

PERFECTLY SATISFIED.

London, N.1.

That the French are masters at carnival decoration is generally admitted, and this snapshot confirms the statement. The elaborate device depicted won a prize at the recent Fête de Narciss at Montreux.

### *PILLION RIDING AND INSURANCE.*

Sir,—I think F. M. Davidson's letter on pillion riding calls for a reply from us, as we are the only firm in a position to advertise "No extra premium for pillion riding." This concession we won for motor cyclists after conclusively proving to the General Accident Fire and Life Assurance Corporation that pillion riding was safe on a Tan-Sad.

Mr. Davidson could surely never have investigated this offer, and cannot be the least acquainted with the standing of the firm who issue the policy, or he would never have offered such advice to others. A perusal of the proposal form will convince the most sceptical of the genuineness of the offer; a glance at the name of the company backing it is also in the highest degree convincing.

Yes, we know pillion riding is safe; we made it so, and converted one of the largest and most important insurance companies in the country to our view, and all for the benefit of F. M. Davidson and his fellow motor cyclists, and we are hoping to gain a still further concession for them in the near future.

W. T. O'BRIEN, London Manager,
"Tan-Sad" Works.

### *3-inch TYRES AND SIDESLIP.*

Sir,—I admire our old friend Ixion for the candour which has impelled him to ventilate his one doubt about 3 in. tyres on a 500 c.c. machine, after the eulogy he has expressed for this size of tyre. My experience has been that these tyres, on a medium-weight machine, are a mistake. Being too large for the weight they carry, they create bouncing and rolling, and without any question they are more liable to sideslip under conditions that the 2⅜ in. tyre. The latter, however, I have found too small. My mileage with all sorts and sizes of tyres exceeds 70,000. From experience, I have found that an extra heavy 2½ in. tyre fitted to a 2¼ in. rim is the best size for a medium-weight machine, being faster,

and more comfortable and resilient, than the 650×65 fitted to a round base rim. For road gripping qualities, extreme comfort, and for fast cornering, the new super-studded 26×2½×2¼ T.T. Hutchinsons, with their double rows of studs each side of the large central studs, are indeed a revelation in tyres. "ENTENTE."

Sir,—Mr. Harry G. Bell, having shaft drive cycles to sell, can see no virtue in a chain direct and parallel drive, but has, as good salesman, nothing but praise and clever publicity for spur and right-angle drives.

I can imagine nothing more efficient than direct chain drive from the engine to the back wheel. The maintained efficiency of an enclosed chain drive is over 98%. Engineers are agreed that spur or mangle gearing (which Mr. Bell advocates because it happens to be *present* car practice) under ideal conditions, conditions which do not exist in the motor cycle, lose in each reduction not less than from 8% to 10%. A. E. PARNACOTT, M.I.Auto.E.

*TEMPERAMENTAL ENGINES.*

Sir,—"Ixion," in your issue of June 15th, puts forward another theory regarding the "Rudge Mad Moment," *i.e.*, the use of a certain type of inlet spring causing the valve to seat unevenly and work "cock-eyed." Since starting this correspondence I have tried most remedies, and they include:

(1) A standard conical Rudge spring.

(2) A Perry, with top and bottom coils of equal diameter.

(1) Is much stronger than (2), and the running is not perceptibly affected by the change, the "mad moment" not being affected at all.

The theory put forward in your issue of June 8th concerning wear in the exhaust rocker causing the inlet cam to lift the exhaust valve, thus forming a decompressor, struck me as hitting the nail on the head: however, I've inserted new rockers, in which there is no lateral play whatever, and retimed, without improvement. I don't think I've missed any possible explanations, and I've exploited all my own, and I have not, as yet, in three months' trying, touched the trouble. R. S. L. BOOTE.

Sir,—I think there is something in your reader's solution of rarefied air being the cause of mad engines. I use my priming tap as an extra air valve, and some days on opening it the engine goes mad, at other times no difference is noticed. The air lever on my carburetter (Senspray) is hardly any use once the engine is warm, being full open all the time. I get 90 m.p.g. on petrol, and 100 on benzole.
South Bank. SPARKS R.E.

Sir,—Re "Ixion's" remarks on Rudges' "super-Rudging it." Yes! Mine did, before I left England, of course. One would be tootling along like a little old gentleman, when suddenly she seemed to gather her skirts about her knees (N.B.—This is not a mixed metaphor), and fairly "beat it" for a few yards, and then settle down again. Everything was well-nigh perfect, yet most things were renewed, as every brain-wave was put to practical use. The carburetter was changed to no effect, and air leaks so eliminated, that with the jet stopped up the whole carburetter inlet dome and valve complete would hang pendulous from one's mouth if one sucked hard enough. *Everything* was tried, until the one thing, of necessity, possible of doubt was the magneto, a C.A.V. that would have blushed if it thought I didn't trust it, from sheer pride. But I had to be firm, and couldn't have trusted Lloyd George himself at that time. The makers returned it as perfect. A local repairer said he rarely had the pleasure of seeing a "machine" in such delightful order. The *third* time I took it to the repairer I took a Service revolver with me, and dared him to say it was all right, and also to understand that to mention "petrol supply," "valve-timing," or "compression" was certain death. When I called a week later he wore that awful smile that tells of perfect confidence, and beyond telling me to try it, wouldn't utter a word. The Rudge started over the first compression and ran quite well for the rest of the time I had her, with no sign of "super-Rudging." In the absence of data I am wondering if now she always "super-Rudges" or just 'Rudges." Anyway, I quite fail to see how a magneto could cause the trouble, but that was my experience. Can some of our magneto Marconis enlighten us?

I should be delighted to give "Ixion's" friend the repairer's address, but don't know if he can do it again! He has completed his masterpiece, and now peacefully awaits the end.

The last straw would be to find "Ixion's" friend has my machine—if journalist's friends ever have such a thing as a second-hand one. But that is too cruel, almost, for Fate. The registration number, I think, was HC-1664.
Karachi. CECIL W. USHER.

*THE AMATEUR ROAD RACE.*

Sir,—Much paper and ink has been used in discussing an amateur road race without running up against the one thing which would, to my mind, put the "kybosh" on it—"the question of expense." How many real amateurs are there who could afford £30 (the very minimum) for the pleasure of hurtling round the Island at about 60 m.p.h. for four or five hours?

My scheme rests on two facts. First, that practically every other body governing various sports allows an amateur to have his expenses paid by his club without loss of status. Secondly, that most clubs offer some sort of trophy for the best amateur rider.

The thing to do is to combine the two. I am not suggesting that every club is wealthy enough to provide the necessary funds, but different clubs in the same city, county, or even the different centres, might combine with this object, or alternatively the rider might pay a certain portion of the expenses. I would suggest the following rules as necessary:

That the secretary of the entering club must guarantee the following:

(1.) That the rider is a bona-fide amateur (*i.e.*, that he is not in any way riding for profit, neither has he in any way done so, and if he is engaged in the motor trade he must not use any machine, accessory, etc., in which his firm is in any way interested).

(2.) That he must have qualified by obtaining a gold medal in any centre one-day trial or a M.C.C. trial or such others as the A.C.U. may determine, such trial not to be organised by the entering club.

(3.) That his machine is capable of, say, 50 m.p.h.

(4.) That the same machine will be used throughout without any alteration and without being overhauled by the manufacturer.

(5.) That the machine is a standard machine, such as can be bought by the general public.

The actual selection of the rider would be left to the club.

The club would, of course, be heavily penalised in the event of their statement being incorrect.

J. L. HANMAN.

# Front Wheel Driving and Steering

A front view of the Autogear three-wheeler, which has been tested on rough roads and farm tracks.

## The Autogear Three-Wheeler, a Three-four Seater Runabout of Individual Design.

SERIOUS efforts to seek and adhere to first principles have characterised the planning of the vehicle under review.

Undoubted advantages are associated with front wheel driving, but so far the cycle car industry in this country has eschewed the arrangement, with the exception of one designer, whose earlier products are fairly familiar in West Yorkshire. The Stanhope three-wheelers, driven and steered on the single front wheel, were lively and stable little machines, chiefly handicapped by lack of wide gear ratios.

The Autogear three-wheeler is the logical outcome of the principles tried out in the same designer's earlier machines, but it is manufactured by Autogears, Spring Grove Works, Hyde Park Road, Leeds.

### Advantages of the Lay-out.

Before describing the machine in detail some passing remark may be made on the advantage of front wheel driving, combined with steering on the same wheel or wheels. The most valuable point in its favour obviously is the fact that on a corner the power is directed round the bend, the mass of the vehicle following—thus steering stresses on the chassis are much reduced in comparison with the ordinary back wheel driving machine, where the whole mass of the machine has to be deflected from the straight path against the tendency of the power-driven wheels to continue to run forward without deviation. It is this latter consideration which necessitates the stiff springing of most three-wheeled machines to avoid rolling of the back wheel. Apart from any mechanical advantage, the location of the entire power, transmission, and steering mechanism in front leaves the rear of the machine free for almost unlimited length and carrying capacity.

### All Wheels Interchangeable.

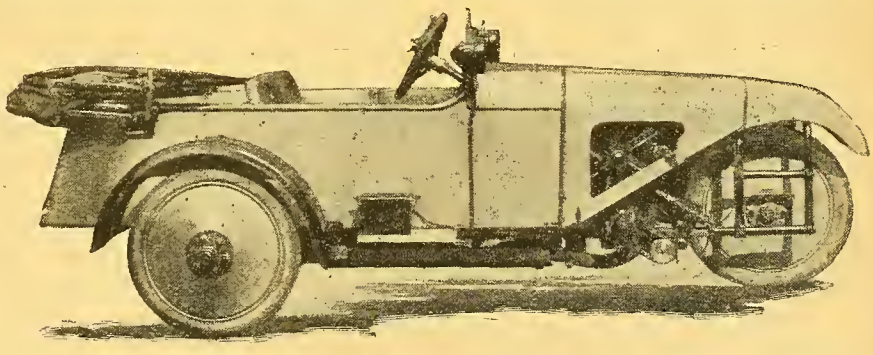
Hitherto, the employment of front driving and steering has involved the use of a comparatively inaccessible wheel, but in the Autogear the difficulty has been cleverly overcome and open-sided wheels are used throughout, all being interchangeable with the spare carried beneath the body.

A tubular chassis consisting of two 1½-in. parallel members 18 in. apart, connected by suitable cross tubes, is employed, and in front of the engine are two inverted U-shaped tubes which bridge the front wheel. These U tubes are joined by two horizontal tubes parallel with the chassis and about 12 in. high and by a similar tube at the top immediately above the wheel.

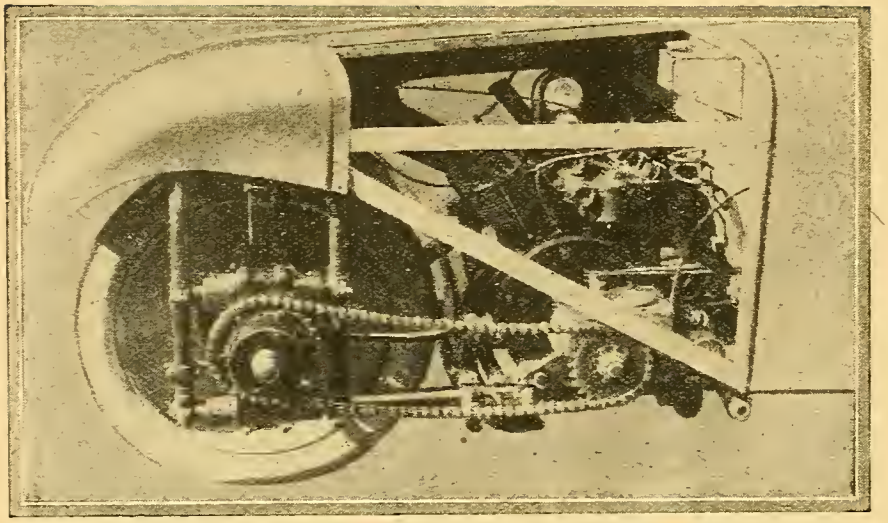
Swinging on the near side of the chassis and on the short horizontal tube above it, between the U members, are two malleable brackets, which at their free ends carry in trunnion bearings a large axle box in which, on heavy ball bearings, runs the live spindle of the wheel. On the hub is an internally toothed ring, and also running in the axle box is a short shaft carrying a pinion engaging with the ring. Joining the two tubes on which the brackets swing is another casting, on which runs, also on large diameter self-aligning ball races, a shell carrying the chain sprocket. The drive is conveyed from the sprocket to the small gear in the axle box by means of a short shaft having universal joints of the ball and yoke type at each end. None of this mechanism is exposed.

### Seeking Ideal Springing Conditions.

So far we have not dealt with the springing. The upward movement of the swinging brackets carrying the front axle box is controlled by a C spring secured to the tube bridging the top of the inverted U tubes and to the upper bracket



Having the whole of the power plant and transmission in front of the dash, advantage is taken of the possibility of fitting a three-four seater body.



The entire mechanism of the 1,098 c.c. Autogear revealed by lifting the bonnet. A chain case is fitted normally.

at a point immediately above the steering pivot; by employing deeply dished Lynton steel wheels, the points of spring attachment, the steering pivots and the centre of the tyre tread are all in the same straight line without canting the wheel or tilting the pivots.

Steering is effected by a rocking lever mechanism actnated by a quick thread on the base of the steering column.

A 1,098 c.c. air-cooled Blackburne twin engine supplies the power, and it is mounted behind the front wheel, slightly to the off-side. In the flywheel is a single-plate fabric clutch, and in the centre of the flywheel is a ball bearing in which fits an extension of the gear box mainshaft. The gear box is specially produced by the makers of the Autogear and is of the usual car type, having three speeds forward and reverse (gear ratios, 5, 8, and 14 to 1, and 15 to 1 reverse). Two lugs on the gear box engage with two lugs on the near-side chassis tube, bolts passing through clearance holes in each, the gear box being located by the shaft in the flywheel bearing above mentioned. This original method of mounting appears to be quite satisfactory and ensures self-centering alignment.

On each end of the tubular rear axle are ball-bearing axle boxes, in which run live spindles carrying the rear wheel hubs. Springing from the chassis tubes outwardly at a point just behind the back of the driving seat are two long laminated springs with practically no camber; these springs are bolted to the axle boxes, again, as at the front, immediately above the point of contact between tyre and road. Internal expanding brakes are fitted, a pedal control being used, with an interconnected hand lever beside the central gate change.

**An "Occasional" Four-Seater.**

Although not recommended for four adults (with the standard springing), a body of the type known to the car world as the occasional four-seater has been adopted. Two adults and two children would find ample room, and even so there is still some luggage accommodation, while the hood covers everything.

Having driven the machine, which incidentally costs £215 with Lucas dynamo lighting, we can vouch for its comfort, silence, and easy steering. The driving tyre (700×80) appeared to receive amazingly little wear, and good climbing powers were exhibited. Very much more powerful brakes, we think, might be incorporated, for a machine capable of fairly high speeds needs ample stopping power. Unfortunately, we could not try the machine on a wet, greasy hill, but with a lighter body it gave the impression of being a most likely mount for freak trial work. A large diameter cooling fan permits long periods of low gear work without overheating.

## ANOTHER CHAIN-DRIVEN SPORTS TWIN.

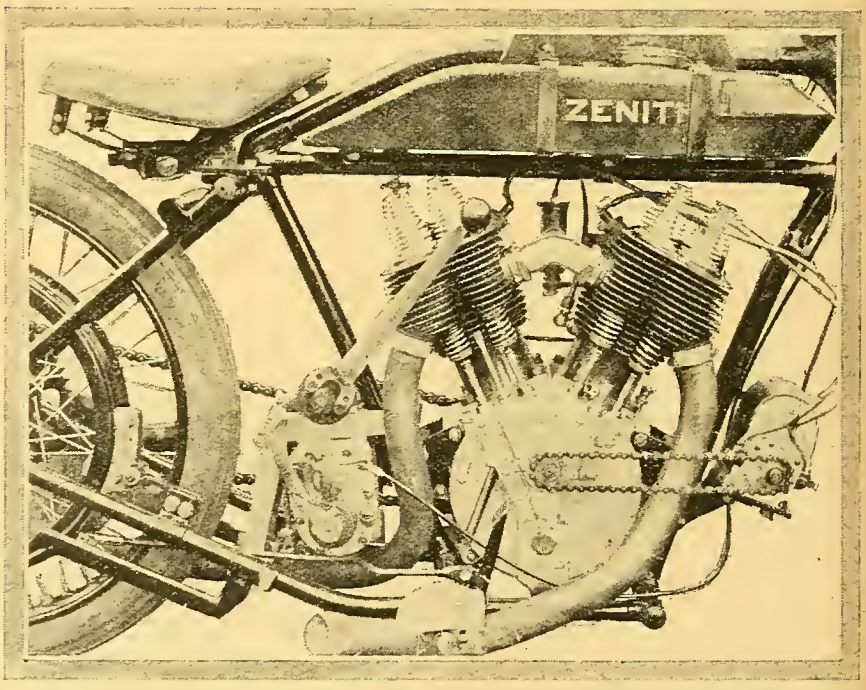
### Zenith Three-Speed Model with 976 c.c. J.A.P. Engine.

A DEPARTURE from Zenith standard practice has been introduced in the shape of a 976 c.c. J.A.P. engined machine with all-chain drive.

The bottom portion of the frame is of the duplex variety, the chain stays extending forward to a cross member beneath the front engine lug. The Sturmey-Archer gear box is carried on a special bracket extending from the top of the rear engine plates to a cross stay joining the duplex members behind the box. A special bracket which carries the change speed lever is fixed above the gear box by two of the clamping bolts; thus the control slides with the box for chain adjustment purposes, without interfering with the operating rod adjustment.

The particular machine illustrated is a special racing variety of the model under consideration; it took part in last Saturday's 200-mile sidecar race. The main design of the standard model is essentially the same, except that the exhaust pipes lead first of all into a large expansion chamber underneath the magneto, and terminate in a long exhaust.

Manufactured by Zenith Motors, Ltd., Hampton Court, Middlesex, the price is £126 with standard J.A.P. engine, or £130 with the special super-sports unit.



Close-up view of the engine and transmission units of the 976 c.c. all-chain drive Zenith This machine is actually a racing model, but is practically identical with that to be supplied as a standard sports model.

# FRANCE'S PREMIER EVENT.

## The Grand Prix at Strasbourg on July 12th. List of Entries. Particulars of the Course—and How to Reach It.

ENTRIES have now definitely closed for the French Grand Prix Motor Cycle Race, to be run at Strasbourg on July 12th, with 44 machines in the three classes. Unless last minute entries have been received in England on behalf of the French Club, there will be 23 machines in the 500 c.c. class, 6 in the 350 c.c. section, and 15 in the 250 c.c. class. Many of the riders have not yet been announced, so that the following list, while complete so far as the machines are concerned, is incomplete for the men:

**500 C.C.**

1. Norton.
2. Norton.
3. Norton.
4. Alcyon.
5. Alcyon.
6. Alcyon.
7. Peugeot (Gillard).
8. Peugeot.
9. A.B.C. (Bartlett).
10. A.B.C. (Naas).
11. Sunbeam (Bennett).
12. Sunbeam (de la Hay).
13. Sunbeam (Chappaz).
14. Triumph (Pitney).
15. Triumph (Edmond).
16. Triumph.
17. Motosacoche (Pélisier).
18. Motosacoche (Zind).
19. Griffon (Borgotti).
20. Norton (Bastide).
21. Norton (Francisquet).
22. Norton (Hollowell).
23. Koehler (Escoffier).

**350 C.C.**

1. Alcyon.
2. Alcyon.
3. Garelli.
4. Garelli.
5. Garelli.
6. Terrot.

**250 C.C.**

1. Armor.
2. Thomann.
3. Motosolo, Clech.
4. Massey Arran.
5. New Imperial (Bert Kershaw).
6. Levis (G. S. Davison).
7. Isoard Liaudois (Isoard).
8. Velocette (Cottin).
9. Velocette (Nel).
10. Yvel's (Fromeut).
11. Yvel's (Vernisse).
12. Chauvière (Chauvière).
13. Terrot.
14. O.K. (Handley).
15. O.K. (Woods).

Undoubtedly the start of the race will be made at eight o'clock on the morning of Wednesday, July 12th, in three groups, with a very short interval between them. The course, which is about $8\frac{3}{10}$ miles round (exactly 8.3158 miles), has to be covered 20 times by the small machines, 25 times by the 250 c.c. mounts, and 30 times by the 500 c.c. racers. It is not intended to publish times lap by lap, as is usually done in French road races, but to show the number of laps covered by the individual machines, the time only being given at the end of the race.

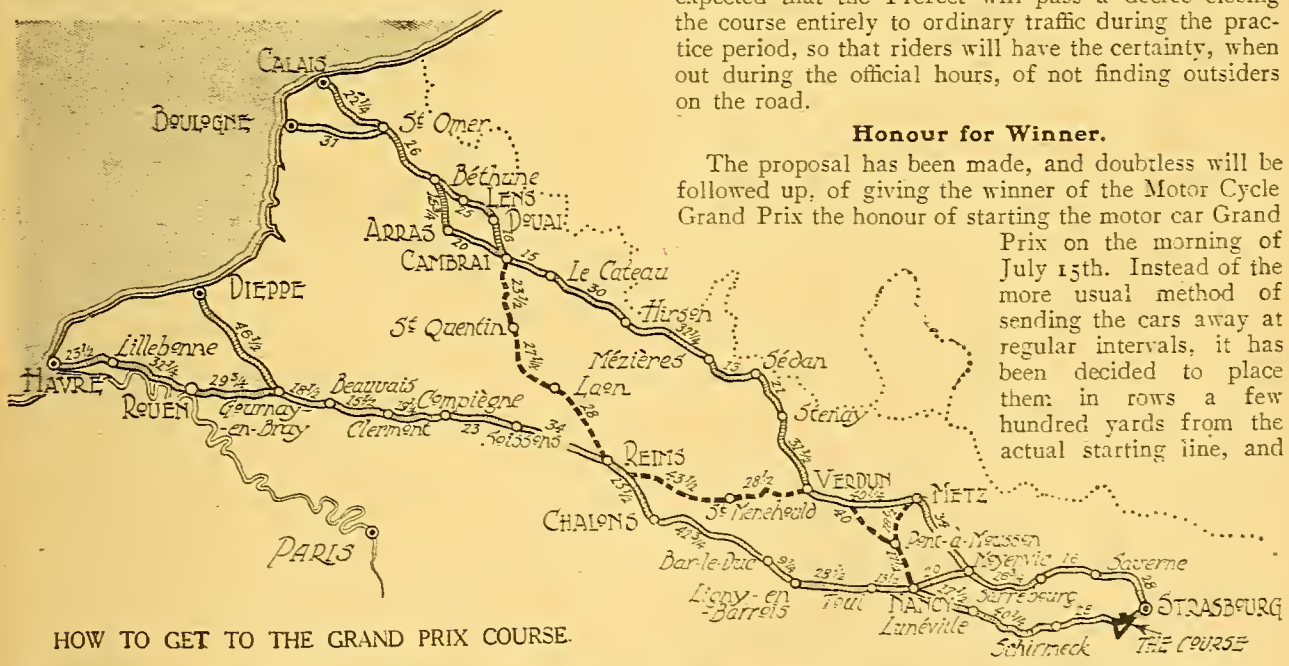
### Course in Good Condition.

The Strasbourg course promises to be in excellent condition for the race next month. The whole of the surface has been relaid, hard granite from the Vosges mountains being used, and there will be a final treatment with calcium chloride in order to render the surface absolutely dustless. The fact that this race is followed by a couple of motor car races on the 15th and the 16th makes it possible to prepare the roads much more thoroughly than could be done if the motor cycle event only were on the programme. As an indication of the elaborate nature of the preparations, one of the local authorities has granted 150,000 francs (more than £3,000 at present exchange) for the relaying of the roads only, while the Municipality of the City of Strasbourg has voted a subsidy of more than £6,000 towards general expenses.

It is expected that the practice period will be from July 1st to 8th, certain of these days being for cars and others for motor cycles. In former years practice has only been tolerated by the local authorities, the public being warned that cars and motor cycles would be on the road at certain hours, but no power existing to keep people off the highway. This year it is expected that the Prefect will pass a decree closing the course entirely to ordinary traffic during the practice period, so that riders will have the certainty, when out during the official hours, of not finding outsiders on the road.

### Honour for Winner.

The proposal has been made, and doubtless will be followed up, of giving the winner of the Motor Cycle Grand Prix the honour of starting the motor car Grand Prix on the morning of July 15th. Instead of the more usual method of sending the cars away at regular intervals, it has been decided to place them in rows a few hundred yards from the actual starting line, and



HOW TO GET TO THE GRAND PRIX COURSE.

"THE AUTOCAR" ROUTE. Calais—Strasbourg (*via* Arras), 372¾ miles; Boulogne—Strasbourg, 381½ (*via* Douai, 5¼ miles further). *Via* Cambrai, Reims and R.A.C. Route, Calais—Strasbourg, 374 miles; Boulogne—Strasbourg, 382¾ miles. R.A.C. ROUTE. Havre—Strasbourg (*via* Sarrebourg), 406 miles; Dieppe—Strasbourg, 367 miles. The Luneville Route saves 5 miles; Verdun—Metz Route adds 6¼ miles.

**France's Premier Event.—**

to send them off in a group. The winner of the motor cycle race will be placed at the head of the group, and will lead the racers down to the starting line at a fairly rapid pace. Immediately the line has been cut, the motor cyclist will pull well over to the right and allow the racing cars to go past. This method has been adopted as an honour to the winner of the motor cycle event, and also because a two-wheeler can slip out of the way of the oncoming racers much quicker than a car While the drivers of the racing cars cannot change their positions until the motor cyclist has given the signal, it is obvious that they will remain hard on the heels of the starter.

### The Course Described.

Entzheim, a village 6¼ miles south-west of Strasbourg, is the nearest point of the course to that city. It is interesting that the whole of the circuit is on by-roads (*chemins vicinaux*), which are very different from the by-roads in England, being mostly straight and with fine surfaces. Half-way between Entzheim and Duttlenheim is Duppigheim, where the start and finish take place and where the grand stand and replenishment booths are situated.

The race proceeds in an easterly direction, and then turns an acute angle southwards along a perfectly straight road to Innenheim. Here is a right-angle bend forming the base of the triangle, where there is another right-angle turn bringing the competitors back to the start, a distance of just over 8 miles.

From the grand stand the road falls away slightly, but after the Entzheim turning rises about rooft., and then falls down towards the southern end of the triangle. After that point it rises slightly, falls to Duttlenheim, and is slightly on the down grade to the grand stand. These gradients are very slight, the maximum up-grade being no worse than five per cent. (1 in 20).

Last year's winner of this French classic race was A. Bennett (Sunbeam), the winner of this year's Senior T.T. His speed was 59.9 m.p.h., as compared with 58.3 m.p.h. averaged in the T.T.

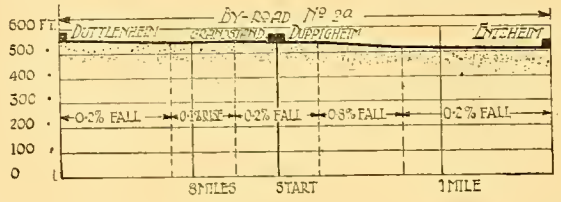
Thus it will be seen that, irrespective of twelve months' advancement in engine efficiency, the figures reveal that the Grand Prix course is nearly 2 m.p.h. faster than the Isle of Man circuit. Considering that there are no serious hills, one may estimate that the race this year will be won at a speed exceeding 60 m.p.h.

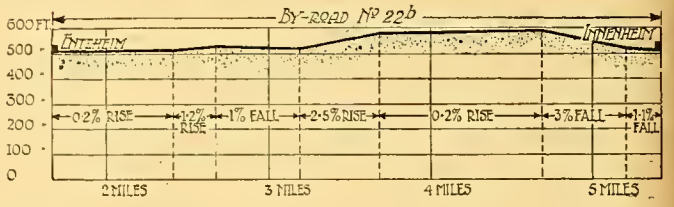
### How to Get to the Course.

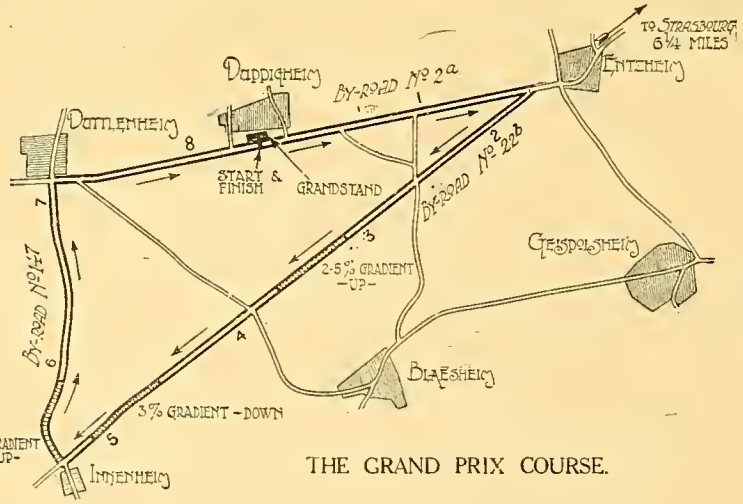
Strasbourg is just over 400 miles from the coast, and is most conveniently reached from Dieppe or Havre. The roads are mostly in good condition, and pass through many towns on the late French front, but it is not necessary to pass through Paris.

Readers of *The Motor Cycle* who contemplate visiting either Strasbourg for the Grand Prix, or Geneva in connection with the International Six Days, are reminded that an article which appeared early this year gives full information as regards the formalities for taking a machine to the Continent. This article has now been brought up to date and reprinted, and a copy will be sent on application to anyone interested.

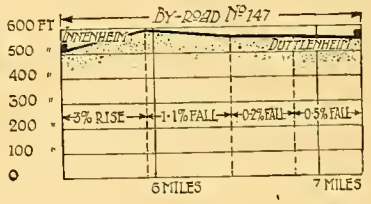
An excellent route from the coast to Strasbourg was published by our sister journal *The Autocar* on June 17th. This route is shown in the map together with an alternative, available from either Dieppe or Havre. The dotted lines in the map show alternatives passing through various places of interest. It will be seen that of the most direct routes *The Autocar* route from Calais to Strasbourg is just over 372 miles, while the most direct route from Dieppe is 367 miles.







THE GRAND PRIX COURSE.



CONTOUR SECTIONS OF THE STRASBOURG CIRCUIT.

It will be seen that the route of the Grand Prix is totally different from that of the T.T. in the Isle of Man. The contours above are of the three sides of the triangular course; the start and finishing point is indicated on the first contour.

# ALL-NIGHT RUN INTO SCOTLAND.

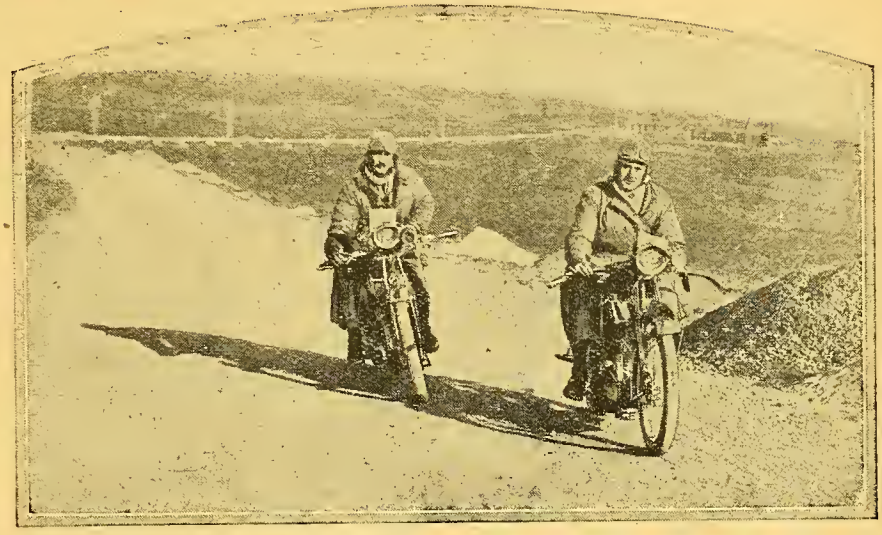
## Newcastle Motor Club's 224 Miles Trial.

FULLY fifteen hundred spectators assembled in the Haymarket, Newcastle, on June 17th, to witness the departure of the sixty competitors in the Newcastle and District Motor Club's 17th All-night Reliability Trial, which covered a course of 224 miles with Edinburgh as the farthest point.

Policemen struggled hard to keep an opening for the competitors, but with little avail, for, immediately a competitor had little more than "squeezed" his way through, the crowd, with craning necks, closed in again in an endeavour to get a glimpse of the next man and hazard a guess as to what his mount was. Brewis (N.U.T.) shot off at speed, wobbled badly in the crowd, and came off—to the amusement of the onlookers—but fortunately escaped serious injury.

### An Early Secret Check.

The first check was at Alnwick, and the main North Road being, on the whole, in good condition, many of the competitors were soon ahead of time and were neatly caught at a secret check which was being worked at Newton-on-the-Moor, about two miles from the old Northumbrian county town. At Berwick the competitors were more watchful, the first man, R. Reid (Scott), passing into Scotland at 11.6. Here W. Richardson had trouble with the electric lighting of his N.U.T., and although he managed to purchase another set of lamps, decided to retire, having lost almost an hour. A head wind had now developed, and, despite the late—or early—hour, a goodly crowd of enthusiasts was assembled at the Dunbar check. In Musselburgh a secret check was in operation, but became a fiasco, the checker, though aided by two policemen who seemed to enjoy the little diversion from their usual round, failing to distinguish the numbers on the majority of the machines. The outward journey—120 miles—terminated at Edinburgh, where one hour was allowed.



A pair of Norton riders on Otter Caps during the All-Night Trial to Scotland organised by the Newcastle and District M.C.

As dawn was breaking the first man was despatched on the return journey, the route through the Lowlands being via Dalkeith, Soutra Hill, Lander, Earlstown, and St. Boswell's to Jedburgh—and a second breakfast stop. Three secret check sections of ten miles each were included in the remaining fifty-six miles, the first commencing four miles from Jedburgh, and the second on the climb over the Otter Caps after leaving Otterburn. The morning was gloriously fine, and the gorgeous moorland scenery provided an excellent tonic for the now tiring riders, who had to keep a sharp look out for the sheep which, grazing by the roadside, became greatly alarmed and galloped for miles along the road.

Punctures, from which the competitors had been practically immune, now began to cause trouble, S. Fullerton (Rover), who up to this time had been well on schedule, losing his chance of a gold 25 miles from the finish, whilst nearer home still J. Stewart (A.J.S. sc.) also fell a victim, but, speedily slipping in the spare wheel, made up his lost time. A badly cut up road, with huge pot holes, provided the last stretch, the competitors being timed in a mile from Newcastle.

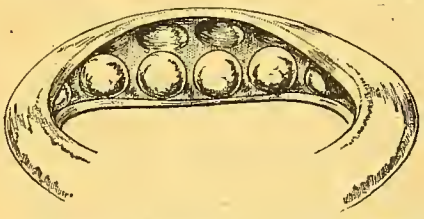
# AUSTRALIAN SOLUTION OF THE TYRE PROBLEM.

## Puncture-free and Unburstable Construction Evolved by a Sydney Inventor.

HERALDED as the "last word in pneumatic tyres," the tyre invented by Mr. J. H. Channon, of Sydney, is at any rate something out of the ordinary. The inventor has tested it severely, and claims it to be unpuncturable and unburstable under present-day conditions.

The principle of the tyre is the enclosing of a number of air inflated balls made of stock tubing within a specially moulded rubber tyre having perfect spherical cavities. These balls can be inflated to any pressure, and are placed in the rim under pressure, the method being adaptable to the ordinary tyre, and it is claimed that it is possible to put on the tyres quite easily.

The new idea, the inventor claims, eliminates all ordinary tyre worries and troubles. There being a series of balls, if one should happen to burst, which it would do only under extremely hard conditions, it is scarcely feasible to believe that the whole lot would burst at once. Even allowing for the very remote possibility of the lot bursting the machine might be run home without injury to the



Claimed to be unpuncturable, the Channon tube, cut open to show how the air inflated balls are moulded with the tube.

bead of the tyre because of the support accorded by the rubber between the balls. It will be seen from the illustration that the cavities are of such a shape that they completely consolidate the air in the balls to a given space, with thin rubber supports in between, which directly take the weight of the load, the air-balls taking the pressure gradually, thus offering a cushion and a resiliency to the shock on the axles.

Four years is said to be the life of the tyre, and it is to be guaranteed 20,000 miles.

The ultimate object of the inventor is to produce a combination tyre with a higher rim than the present-day one, which will lend support to the balls under weight, thus doing away with, or taking the place of, the present-day cover. The tyre will be known as the "Channon-Marshall."

# A CHANNEL ISLES CLASSIC.

## Inter-Island Reliability Trial; 54 Entries for the A.C.U. Cup.

An American Excelsior at Pleinmont. A typical Guernsey country lane.

TRIALS in the Channel Isles have a fascination and environment all their own, and early this month 54 machines were brought up to the starter for an 80-mile run for the A.C.U. Cup in Guernsey, the isle where every road is a hill and every hill a corner.

The riders were dispatched in pairs at one minute intervals. The first observed hill—Petit Bot—occurred at the end of 13 miles, and was composed of hard gravel to the first of five hairpins, all particularly nasty, along little more than a goat track. Two of the three lady competitors, Miss Niles and Mrs. Mauger (Guernsey), fell on the worst bend. E. Le Caudey (Jersey) also fell, but E. Winterflood, M. Slaytor (Guernsey), S. T. Blundell (Jersey), were all good.

In the Talbot Valley a freak hill, The Niaux, caused a thousand or so spectators to gather to watch the climbs. A. Holland (654 Coventry Eagle, Guernsey), E. Pirouet (678 Martinsyde sc., Jersey), P. Mauger (499 Verus), Miss Niles (348 Wolf), E. Winterflood (499 Coventry Eagle, Guernsey), and B. Ellett (490 Norton), E. C. Oldham (633 Norton), E. Charlton (490 Norton), were all clean and steady in their attempts.

Following a lunch interval at the western point of Pleinmont, a resumption was made with a climb up the ragged surface of a grass lane. Mrs. E. Oldham (550 Triumph sc., Jersey) made a clean ascent here, but both S. Peek (595 Douglas) and E. de Putron (633 Norton, Guernsey) came off on the 1 in 4 portion. The Griffon hill gave trouble to F. Touzel (499 Rudge, Jersey), who konked out, and to E. Le Maitre (293 Connaught, Guernsey). Clean ascents were effected by T. Le Cheminant (499 Coventry Eagle), W. Blondel (348 Coulson), A. Gorman (550 Triumph sc., Guernsey), and V. Bryant (496 Brough), A. Kempster (550 Triumph), and D. Le Caudey (550 Triumph, Jersey).

Pluck and sand must be in the make-up of a rider who can complete such a run on a 1910 fixed geared Win-Precision

Mrs. P. Mauger (left) and Miss N. Niles, Guernsey's two most accomplished lady motor cyclists.

—a feat accomplished by E. H. Le Brocq (Jersey), and almost equalled by C. Millard (Guernsey) on an old two-speed Clyno two-stroke. The home riders were very clean on hills, but in the majority of instances too early in controls. Steadiness sent the A.C.U. Cup to Jersey.

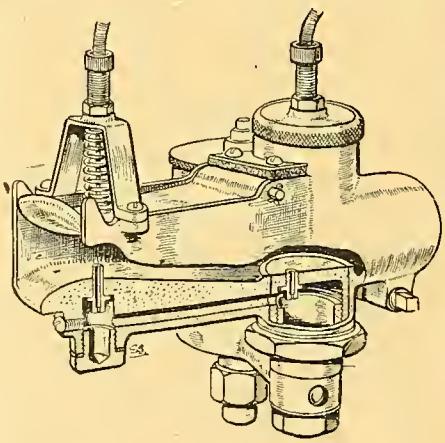
Results.—A.C.U. Cup and gold medal: E. Pirouet (678 Martinsyde, Jersey). Silver medals: A. Holland (654 Coventry Eagle sc., Guernsey), B. Ellett (490 Norton), E. Le Brocq (1913 348 Douglas), H. L. Cutbush (633 Douglas sc.), all Jersey. Ladies, first: Miss N. Niles (349 Wolf, Guernsey).

# A FULL POWER CARBURETTER.

## A New Binks Model for Sporting Mounts.

FOR some years past the Binks "rat-trap" carburetter has held a high position amongst the racing fraternity. Unfortunately, the racing Binks carburetter being built for racing purposes was not sufficiently flexible for use in more normal circumstances. Nevertheless, there have been steady demands for such an instrument in a modified form, and this demand is now being met by the latest product of C. Binks, Ltd.

Similar in most respects to the racing models, the new carburetter has a piston throttle in the normal position, and directly below this throttle but somewhat to the rear of the barrel is fitted a pilot jet; the expanding choke is arranged in much the same manner as before—that is to say, the top portion of the rectangular section passage is hinged at the front end, the rear end being controlled over a fairly wide range by a separate cable control. Just inside the mouth of the air intake at the point of highest air speeds lies the main jet, which is easily accessible should a change be necessary. The float chamber is detachable and adjustable for position, and a filter is fitted above the petrol inlet to the carburetter body.



A modified form of the racing type Binks carburetter for use on any sporting mount.

This new carburetter has been subjected to tests on a modern high efficiency engine, and we have found that it bears out the claims of the manufacturers in every respect. The slow running on the pilot jet is good, and with the throttle open and the main jet in action, it is possible to obtain very high speed, since the air passage is entirely unrestricted, except for a very slight choke near the main jet. In addition the acceleration is very rapid. The makers do not claim that the new carburetter is exceptionally economical or automatic in action, but it has been produced with the idea of supplying the need of a carburetter for sporting machines—that is, an instrument which will enable the highest speeds and good acceleration to be obtained while the engine can be throttled down and easily controlled in traffic and other normal road conditions.

# CURRENT CHAT

## Times to Light Lamps.

### Next Thursday.

Next week's issue of *The Motor Cycle* is the annual Summer Number.

### Distinctions.

"Two wheels for sport, three for safety, and four for swank," writes "Ixion" in chiding an old motor cyclist for abandoning his earlier love for a motor car.

### The Bonus Bugbear.

A unique system of awarding marks of merit has been devised by Hans Renold, Ltd., to overcome the bonus bugbear, referred to in our issue of the 15th. Particulars of it will be found on page 872 of this issue.

### Loss to Motor Cycle Sport in Ireland.

It is with sincere regret that we have to announce the death following an accident of Mr. Bernard M'Givern, son of Mr. Peter M'Givern, J.P., Newry Street, Banbridge, and vice-captain of Banbridge and District M.C.C., a photograph of which appeared in the March 16th issue of *The Motor Cycle*.

### Relativity.

Americans always assume an innocence regarding the size of Great Britain, and pretend that in motoring in our country they are always in fear of "going over the edge." British motor cyclists who have not visited the Isle of Man sometimes refer in similar terms to motoring in the I.O.M. What will the majority of our readers think of the 80 mile trial in the little island of Guernsey, referred to on page 882.

### Trials not Prohibited.

Mention was made last week at the Bromsgrove Rural Council of the danger occasioned to the public by motor cyclists using narrow lanes in the Romsley district, and taking corners at high speeds. It was suggested that motor testers should be controlled, and that motor charabancs should not be permitted to use unsuitable roads. Eventually it was decided that permission should be given for motor cycle trials on condition that the course was properly policed, and that a contribution of £5 was made towards the damage to the roads.

### Finality not in Sight.

Those who sometimes express the opinion that finality in motor cycle design will soon be reached may not live to see the day. So far as reliability is concerned British motor cycles have certainly reached a high standard, but today there is no more indication that design is settling down to one pattern than was the case a decade ago.

A SUMMER NUMBER
OF
THE MOTOR CYCLE
WILL BE PUBLISHED NEXT
*Thursday, July 6th.*
Special articles and illustrations of an appropriate nature are in course of preparation for this enlarged issue.
**To prevent disappointment definite orders should be placed with Newsagents.**

## Special Features.

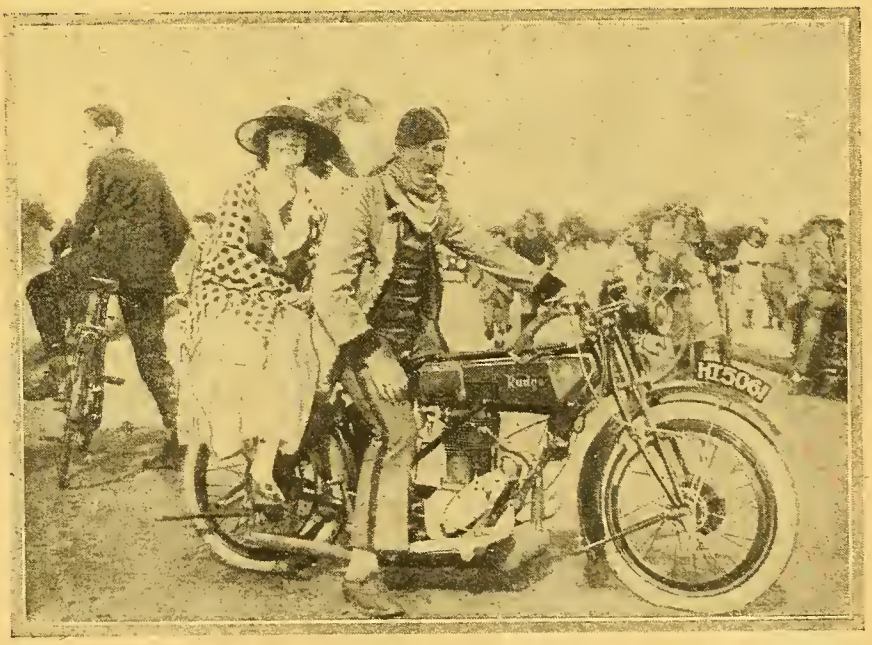
A FOUR-SEATED THREE WHEELER.
THE BONUS QUESTION.

### Motor Works Purchased.

The well-known motor cycle manufacturers, A. J. Stevens, Ltd., of Wolverhampton, have purchased the Briton Motor Works from the receiver in liquidation, Mr. R. H. Johnston. The Briton Motor Company was established in 1906 in Stewart Street, Wolverhampton, and moved in August, 1920, to the present large premises in Lower Walsall Street.

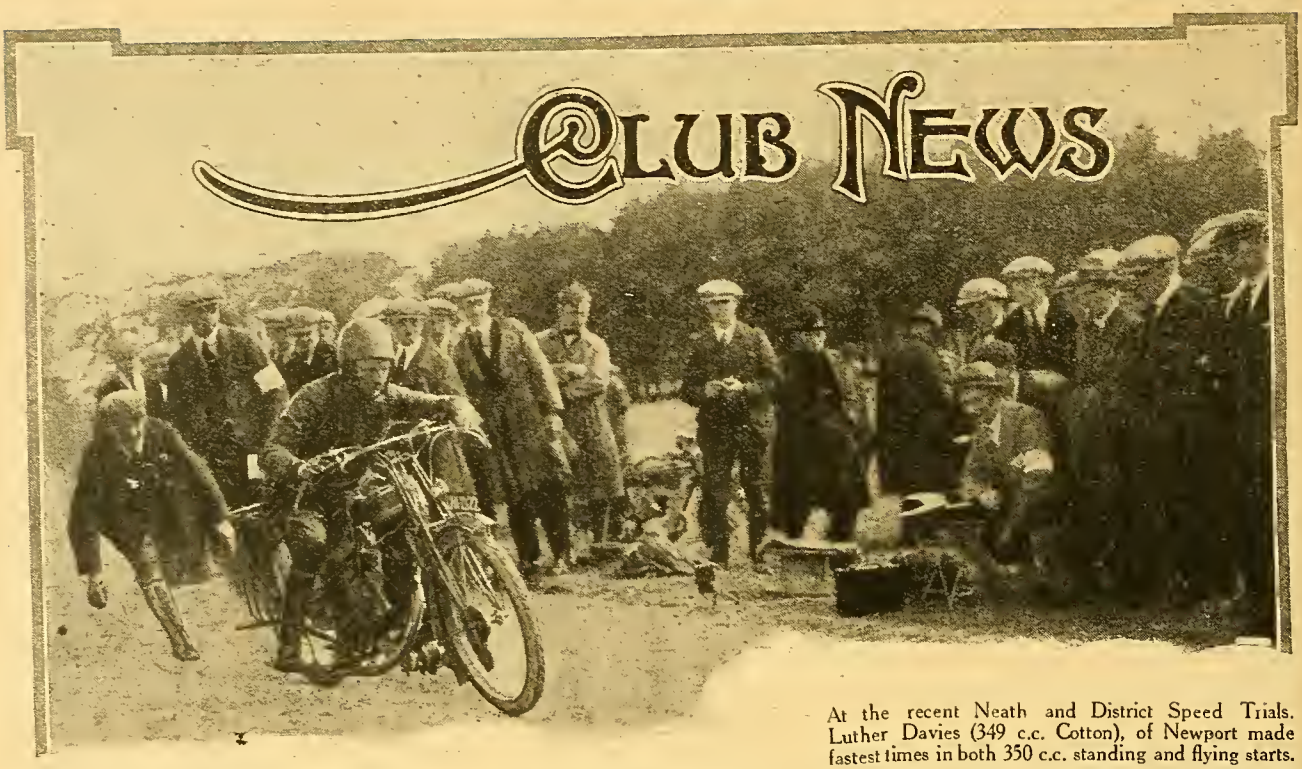
### Presentation to T.T. Riders.

An interesting gathering took place on Monday, June 19th, at the offices of the Triumph Cycle Company, Ltd., when W. W. Brandish, Jun., and F. B. Halford were presented with gold chronometers suitably inscribed in recognition of their successful efforts in the recent Tourist Trophy Race. Brandish (499 o.h.v. Triumph), it will be remembered, finished second in the Senior Race at an average speed of over 56½ m.p.h.



THE "COSTER AND GAL." Mr. and Mrs. Le Brun (499 c.c. Rudge-Multi) who won first prize for solo mounts in the Fancy Dress procession organised by the Bristol M.C.C. on the recent Hospital Saturday.

# CLUB NEWS



At the recent Neath and District Speed Trials. Luther Davies (349 c.c. Cotton), of Newport made fastest times in both 350 c.c. standing and flying starts.

## Loughborough and District M.C.C.

Readers will be interested to learn that Clipstone Drive, the well-known speedway, has again been granted for the use of the Club for the Speed Trials which are being held on July 29th under the auspices of the Mansfield and Loughborough Clubs.

## Sutton Coldfield and North Birmingham A.C.

Permission has been obtained to held a hill-climb on Angel Bank, a main road hill near Cleobury Mortimer, and numerous classes will be run in this event. Full particulars may be obtained from Mr. W. S. Banner, 30, Cromer Road, Balsall Heath; or Mr. W. Watson, 40, Edmund Street, Birmingham.

## Southport M.C.

Birkdale Sands was the scene of the race meeting held by this club, when some excellent performances were put up. The following riders gained prizes:—C. H. Foster (349 New Scale), H. Porter (499 Sunbeam), E. Headlam (998 Zenith-Bradshaw), A. Houlding (349 Matador-Bradshaw), C. Waterhouse (499 Sunbeam) and S. Ollerhead (494 Douglas), who made fastest time of the day.

## Neath and District M.C.

Competitors for the Margam Trials on July 22nd will be interested to learn that, in addition to the Silver Cups offered by the Port Talbot Fête and Gala Committee, the Neath Club intends putting up the Evans-Bevan Silver Cup for the competitor making fastest time on the Margam course for motor cycles and sidecars.

## Lichfield and District M.C.C.

F. H. Twyman (499 Sunbeam) gained a 1st class award, and H. Hines (998 Blackburne) a 2nd class award in the reliability trial held recently at Lichfield. Another trial of a similar nature is being held on July 2nd, starting at 2 p.m., particulars of which may be obtained from the Hon. Sec., Mr. H. Hoskison, "Fradley," Lichfield.

## Keighley M.C.C.

A strenuous course was selected for the reliability trial which took place on June 18th. Some difficult hills were encountered, both from the ascending and descending point of view, and several retirements had to be recorded. Creditable performances were made by W. Smith and E. Ackroyd (499 Sunbeams) and R. Green (349 A.J.S.). H. Pearson (486 Scott Squirrel sc.) had to retire in the early part of the trial with a broken sidecar spring, and G. Shore (557 B.S.A. sc.) met with brake trouble and had to drive into the moorland bordering the track to avoid worse results.

## The Motor Cycling Club.

The ninth members' race meeting of this club is being held on Brooklands track, Weybridge, on Saturday, July 8th, full particulars of which can be obtained from Mr. J. A. Masters, 22, Norland Square, Kensington, W.11. Three prizes will be given for each event if sufficient entries are received; there will be twelve races, the first of which is timed to start at 1.30 p.m.

## Keighley M.C.

The course chosen for the reliability trial held on June 18th was rather strenuous, and eventually proved too much for the sidecar class, which was completely eliminated from various causes. In the solo class there were only three survivors, and they received awards as follows: 1, W. Smith (499 Sunbeam), trophy and gold medal; 2, R. Green (349 A.J.S.), silver medal; 3, E. Ackroyd (499 Sunbeam), bronze medal.

## Grimsby M.C.C.

On Saturday, July 1st, at 3 p.m., a Gymkhana will be held in aid of the Grimsby and District Hospital. Entries for the various events are free, but a silver collection will be taken. A number of sporting events and competitions have been arranged, and tea will be provided free of charge. Intending competitors are asked to notify Mr. F. Plastow (Chairman of the Humberstone Fitties Syndicate) as soon as possible at 13-15, Osborne Street, Grimsby.

## Cookstown M.C.C.

Excellent weather conditions favoured the 30-mile Road Race held recently, and considerable interest in the event was displayed by a large number of spectators. Results were as follows:—(1) Mallon (499 Sunbeam), scr., 38½m.; (2) Fearon (490 Norton), 2m., 40m. 45s.; (3) Hamilton (490 Norton), 46m. 47s. The average speed of the winner was 48 m.p.h., who also put up the fastest lap (about 6 miles) in 7½ minutes. In the Half-mile Speed Handicap, Weir (499 Triumph) was first, Mallon (499 Sunbeam) second and Forsythe (499 Sunbeam) third.

## Northern Centre A.C.U.

Organised by the Barrow and District M.C., the formula results of the Speed Trials held at Eskmeals are as follows, the numbers after each name indicating the "figure of merit":—Class B: (1) G. W. Shepherd (292 Edmund), 990; (2) K. Sayer (249 Velocette), 1559; (3) W. G. Hardman (349 Coulson B.), 2063. Class C: (1) G. W. Shepherd (292 Edmund), 1084; (2) H. Baxter (490 Norton), 1440; (3) F. Dunning (499 Triumph), 1500. Class D: (1) G. W. Shepherd (292 Edmund), 967-9; (2) F. Dunning (499 Triumph), 1303. Class E: (1) G. W. Shepherd (292 Edmund), 1092; (2) H. Baxter (490 Norton), 1374. Class L: (1) H. Jackson (499 Sunbeam), 1356; (2) P. Barron (998 Indian), 2065.

## Sussex County and Eastbourne A.C.

Tuesday, July 4th, has been chosen for holding a Motor Gymkhana at Gildredge Park, Eastbourne, in connection with Eastbourne Carnival Week, and the event should prove both interesting and amusing. Particulars and entry forms can be had from the Club Secretary at 41, Terminus Road, Eastbourne.

## Western M.C.C., Glasgow.

The official results of the "Bates" Trophy Trial held on Saturday, June 17th, are given as follows:—Winner of the Cup: G. Hope-Wilson (New Gerrard B. and S.), with a time-error of 3m. 16s.; First Class Awards: H. Mackie, 3m. 55½s.; T. Currie (799 A.J.S., sc., 4m. 5⅕s.; J. C. Trotter (490 Norton), 4m. 21⅕s.; B. Campbell (799 A.J.S. sc.), 4m. 21⅘s. There were several retirements from various causes.

## Essex M.C.

Joint Open Speed Trials are being held on Wednesday, July 5th, at Westcliff-on-Sea, for all clubs belonging to the Eastern Centre A.C.U., when special attention is being given to the private owner. The trials will take place on the Western Esplanade, commencing at 2 p.m., the distance being one kilometre, standing start. A special prize is offered for the winner of a match between the fastest car and the fastest motor cycle. Details are available from Mr. E. J. Boss, 40, Chancery Lane, London, W.C.

## Natal M.C.C.

Below we give the results of the Speed Trials held at Durban on May 27th, when much interest was displayed in the event. Fastest time of the day was made by J. H. Nicoll (998 Indian). D. A. Scott (349 A.J.S.), 15⅘s., 56.96 m.p.h.; D. Brink (349 A.J.S.), 16⅖s., 54.22 m.p.h. 500 c.c. Class:—L. Van Bergen (490 Norton), 12s., 75 m.p.h.; T. Kenyon (499 Triumph), 12⅖s.; 72.58 m.p.h.; A. V. Baker (499 Triumph), 13⅕s., 68.18 m.p.h.; C. H. Young (499 Triumph), 13⅖s., 67.17 m.p.h.; C. A. Woodward (490 Norton), 14s., 64.29 m.p.h.; J. H. Moulder (499 Sunbeam), 14s., 64.29 m.p.h.; E. J. Bell (486 Scott Squirrel), 14⅕s., 63.38 m.p.h.

## Wallington and District M.C. and L.C.C.

The night trial held on June 17th proved quite successful, the course being from Coulsdon to Brighton and back, when competitors were required to ride to a schedule speed of 20 m.p.h. Only three competitors succeeded in gaining awards, secret checks being responsible for the downfall of the remainder. The winner of the Silver Cup for the best solo performance was E. C. Gordon (499 o.h.v. Triumph), whose time error was only 1m. 50s. Bronze medals were won by G. Baxter (998 Harley-Davidson sc.), 2m., and E. Vallis (976 Matchless sc.), 2m. 30s.

### To Club Secretaries.

Trials secretaries of motor cycle and cycle car clubs are requested by the competitions manager of John Jardine, Ltd., of Nottingham, the makers of the Jardine four-speed gear-box, to forward fixture lists of their competitions and events for the present year.

### North Western Centre A.C.U.

Permission has been obtained to hold a hill-climb on July 29th on a good stretch of road over 20ft. wide and in excellent condition. Situated between Garstang Station and Oakenclough Village, the road is easily accessible from Garstang, which is on the main Preston to Lancaster road. Applications for entry forms should be addressed to Mr. J. H. Peace, "Girsee," 258, Manchester Road, Burnley.

### Ealing and District M.C.C.

The first annual joint hill-climb between this club and the Surbiton Motor Club has been arranged to take place at Kop Hill on Saturday, July 1st, starting at 1.30 p.m., and is open to members of either of these clubs. The programme includes classes for solo machines, sidecars, three-wheelers, and cars. All entries and other communications should be sent to Mr. Frank A. Longman, organising secretary, 17, Boud Street, Ealing, W.5.

### Nottingham & District M.C. & L.C.C.

The results of the Dennis-Bayley Challenge Cup reliability trial, which has been held annually since 1908, are as follows, there being 27 starters for the event. The course was over a 100 miles of varying country. The best performance on time was made by F. W. Stevenson (496 Brough), who won the trophy last year, whilst other principal finishers in order of merit were: J. Cohen (225 Campion), A. G. Robinson (976 Matchless sc.), and S. S. Debenham (976 Campion sc.).

### Coatbridge, Airdrie and District M.C.C.

Saturday, July 8th, has been chosen for the open fast hill-climb on Bowhouse Brae, Thankerton. Members are requested to assemble at Kyle Bros.' Garage, Coatbridge, not later than 2 p.m. All classes are being catered for in the programme, and a prize will be awarded to the competitor obtaining the fastest time in each class, and a special gold medal for the fastest time of the day. Further particulars may be obtained from the hon. sec., Mr. W. A. Morris, Carradale House, Coatbridge.

### Aberdeen and District M.C.

A large number of members and their friends attended the speed trials which took place near Aberdeen on June 17th, when some creditable speeds were accomplished. The distance of half a mile was over an excellent road surface, rendering high speeds safe.

350 c.c. CLASS.—1, G. K. Ferries (349 Massey-Arran), 24⅗s.; 2, T. Smith (225 New Imperial), 28⅖s.; 3, C. Farquharson (349 Sheffield-Henderson), 29⅕s.

1,000 c.c. CLASS.—1, A. Brown (490 Norton), 21⅖s., a speed of 84 m.p.h.; 2, G. K. Ferries (348 Massey-Arran), 24s., a speed of 75 m.p.h.; 3, R. Demster (499 Triumph), 24½s.; 4, W. Cheyne (499 Sunbeam), 24⅘s.

An enjoyable run also took place to the Linn of Dee, leaving the Bridge of Dee at 10 a.m. and arriving at about 1 p.m. Tea was provided by the club during the afternoon.

## Week-End Club Events.

*July 1st.—Bristol M.C. and L.C.C.—Gymkhana at Clifton Zoo Gardens.*
*July 1st.—Gloucester M.C. and L.C.C.—Social Run.*
*July 1st.—Reigate, Redhill and District.—Single Gear Trial.*
*July 1st.—Coatbridge, Airdrie and District M.C.C.C. —Fast Hill Climb on Formula (Open).*
*July 1st.—Dumfries and District M.C. and C.C.—Social Run.*
*July 1st.—Oxford M.C.—Reliability Trial.*
*July 1st.—Coventry and Warwickshire M.C.—Sutton Coldfield Hill Climb (Centre).*
*July 1st.—Coventry and Warwickshire M.C.—Picnic.*
*July 1st.—Yorkshire Centre Speed Trials at Saltburn.*
*July 1st.—Rochester, Chatham and District M.C. and L.C.C.—Brooklands Meeting (Inter-club event).*
*July 1st.—Wolverhampton and District M.C.C.—Competition for Committee's prize.*
*July 1st.—Austin L.C. and M.C.C.—Charity Gymkhana.*
*July 1st.—York and District M.C.—Speed Trials on Saltburn Sands.*
*July 1st and 2nd.—Coventry Triangle M.C.—Matlock and Dovedale (Week-end Run).*
*July 2nd.—Barrow and District M.C.—Speed Trial.*
*July 2nd.—Coventry and Warwickshire M.C.—Church Parade.*
*July 2nd.—Exeter M.C. and L.C.C.—Club Run to Brixham and Berry Head.*
*July 2nd.—York and District M.C. Mr. E. F. Wilson's Run.*
*July 2nd.—Southampton and District M.C.C.—London to Stonehenge.*
*July 2nd.—Colne and District M.C.C.—Run to Redmire.*
*July 2nd.—Bulwell M.C.—Secretary's Run.*
*July 2nd.—Prestwich and District M.C.—Social Run.*
*July 2nd.—Sheffield M.C.C.—Run to Cleethorpes.*
*July 2nd.—Bridgnorth and District M.C.C.—Run to Clent Hills.*
*July 2nd.—Manchester M.C.—Social Run.*
*July 2nd.—Atherton and District M.C.C.—Run to Colwin Bay.*
*July 2nd.—Leeds Motor Union.—Run to Pateley Bridge and Stump Cross.*
*July 4th.—Gloucester M.C. and L.C.C.—Championship Trial for Gibb and Box Cups.*
*July 4th.—Worcestershire M.C. and District M.C.C. —Evening Main Road (Reliability) Competition. Amateurs only.*
*July 4th.—Sussex County and Eastbourne A.C.—Motor Gymkhana.*
*July 5th.—Essex M.C.—Speed Trials at Westcliff-on-Sea.*
*July 5th.—Leeds Motor Union.—Impromptu Run from City Square.*
*July 5th.—York and District M.C.—Burnsall Trial.*
*July 6th.—Atherton and District M.C.C.—Run to Belmont.*
*July 6th.—Gloucester M.C. and L.C.C.—Visit to Royal Enfield Works, Redditch.*

### Mansfield M.C.C.

In the recent hill-climb held by this club F. Sissons (490 Norton) did the half-mile in 23s. and at a speed of 78.2 m.p.h. O. W. Redgate (499 Sh ffield-Henderson) did the distance in 24s.

### Crystal Palace M.C.C.

The inauguration meeting of this newly formed club was held on June 20th, when it was decided to cater for the requirements of the competition rider and tourist by organising sporting events and various runs and lectures throughout the year. Application for membership should be made to the hon. sec. at the club headquarters, 44, Anerley Hill, Upper Norwood, S.E.

### Bath and West of England M.C.

About thirty members of the club took part in a midnight run to the Druid Stones at Stonehenge recently to watch the sun rise through the table stone. The run commenced at 2 a.m., and the riders were rewarded by seeing the sun on the Druid altar stone, reported to be the first time for eight years that it has been visible from here.

### Stockbridge & District M.C. & L.C.C.

The two-circuit 20 m.p.h. reliability trial held recently over a remarkably strenuous course produced the following results: 1, C. W. Hayward (496 Martinsyde); 2, W. H. Clarke (490 Norton); 3, W. P. Archer (557 B.S.A.). In the lightweights H. Webb was the winner on a 225 c.c. "Webb's Velocity."

### Auto Cycle Union.

The Secretary of the A.C.U. (Mr. T. W. Loughborough, 83, Pall Mall, London, S.W.1.) invites all interested in the motor cycle movement to communicate to him any suggestion for an improved and more equitable scheme for the taxation of motor vehicles. Suggestions will be carefully considered with a view to embodiment in the Union's representations to the Government Committee which will shortly consider the matter.

### Oxford M.C.

A members' map reading and 20 m.p.h. reliability trial is being held on Saturday, July 1st, over a 60-mile course, starting at 2.30 p.m., at Cowley Place, Magdalen Bridge, Oxford. A silver medal will be awarded to all competitors who do not lose more than 8 marks (total error), and a bronze medal to those losing not more than 14 marks (total error). The course, which is in the neighbourhood of the Chiltern Hills, does not include any freak hills, and will not be arrowed. Competitors will receive at the start a list of names of all places occurring in the route, with the distance between each.

### York and District M.C.C.

A successful hill-climb was held June 17th at Garrowby Hill. The entries numbered nearly 100, and the results were as follows. Class 1, 275 c.c.: (1) F. Reyaard (249 Menopole), 1m. 3s.; 2, G. Bower (249 New Imperial), 1m. 10s. Class 2, 350 c.c.: (1) R. Wood (349 Massey-Arran), 57s.; (2) G. W. Shepherd (349 Edmund), 58s. Class 3, 560 c.c.: (1) R. T. Cawthorne (490 Norton), 51s. (fastest time of the day); (2) W. Wilkinson (492 Sunbeam), 54½s. Class 4, 750 c.c.: (1) W. Wilkinson (492 Sunbeam), 53½s; (2) R. T. Cawthorne (490 Norton). Class 5 unlimited c.c.: (1) R. T. Cawthorne (490 Norton) 52s.; (2) G. Bower (490 Norton), 53⅖s. Class 6, standard touring: (1) D. Fletcher (560 Triumph), 1m. 3s.; (2) C. L. Burley (560 Triumph), 1m. 8⅕s.

## YORKSHIRE CENTRE COLONIAL TRIAL—RESULTS

IN our report of the Yorkshire Centre (A.C.U.) open trial last week, the principal trophy winners were given. A full printed list is now to hand from the Centre; this shows the total number of marks allotted to each finisher. In addition, it gives such useful information as the weight and price of all the machines, and the instances in which the timed hill-climb figures were used to decide between the performances of riders who were equal on marks in other respects.

Separate trophies, to be won outright, were offered in each class. The full results are:

FIRST PRIZE TROPHIES: B. Kershaw (249 New Imperial), J. Whalley (349 Massey-Arran), H. Langman (486 Scott), C. B. Haigh (532 Scott), J. A. Watson-Bourne (976 Brough Superior), P. Pehrson (499 Dunelt), B. L. Bird (557 B.S.A. sc.), A. R. Stacey (989 Harley-Davidson sc.), W. Ridley (1098 New Hudson).

SECOND PRIZE TROPHIES: P. L. Mayo (249 Coventry Eagle), H. Gibson (349 Raleigh), H. S. Moorhouse (499 Triumph), W. Moore (532 Scott), G. M. Townsend (555 P. and M. sc.).

THIRD PRIZE TROPHIES: C. F. Nott (349 Raleigh), W. Westwood (499 Triumph), G. S. Boston (532 Scott), E. H. Gifford (678 Martinsyde sc.).

CERTIFICATES: J. W. Moffatt (349 Beardmore-Precision), H. J. Greathead (349 Ivy), W. H. Hadfield (349 Raleigh), W. E. Hope (349 Cotton), R. P. Walker (349 Excelsior), J. A. Newman (496 Douglas), A. R. Evans (499 Sunbeam), C. W. Ward (499 Triumph), W. Backhouse (499 Triumph), E. L. Boston (486 Scott), S. Lawrence (499 Sunbeam), W. Smith (499 Sunbeam), J. T. Bashall (678 Martinsyde), W. Brandish (600 Humber), S. Duxbury (532 Scott), W. Clough (532 Scott), J. M. Younie (678 Martinsyde), T. A. R. Arthurs (550 Triumph), J. H. Holmes (532 Scott), A. Greenwood (976 Brough Superior), H. Hainsworth (499 Sunbeam sc.), R. Lewis (555 P. and M. sc.), H. S. Perrey (770 B.S.A. sc.), F. Smith (925 Clyno sc.), W. A. Carr (1,098 Morgan), C. R. Waddington (1,098 Morgan).

NO AWARD: T. H. Blackburn (249 Diamond).

RETIRED: A. Lucas (249 Coventry Eagle, J. Ball (225 Sun-Vitesse), Mrs. G. M. Janson (211 Levis), C. Dodson (349 Royal Ruby), W. Marriott (349 Coventry Eagle), A. Bowie (349 Wooler), E. Searle (349 Sheffield-Henderson), L. Dixon (490 Norton), R. May (490 Norton), J. S. Whitley (499 Sunbeam), J. R. Wilkinson (486 Scott), J. H. Walker (557 B.S.A.), A. K. Filton (976 Brough Superior), W. Wells (499 Sunbeam sc.), W. Kantlehner (499 Wilkin sc.), R. Horsley (633 Norton sc.), G. E. Jackson (598 Beardmore-Precision sc.), G. E. Booth (598 Beardmore-Precision sc.), W. E. Grange (750 Bradbury sc.), C. F. Swaine (976 L.S.D.), J. Robinson (976 L.S.D.).

NEXT THURSDAY
THE MOTOR CYCLE
SUMMER NUMBER.
IT WILL BE AN ISSUE WORTHY OF "THE MOTOR CYCLE"—ORDER YOUR COPY EARLY!

On a steep bye-road near Tring, W. R. Haggas (499 c.c. Triumph sidecar), followed by another Triumph rider. This short incline caused more low-gear work than Kop Hill.

## Seven Teams accomplish non-stop runs in M.C.C. Inter-Team Trial. "The Motor Cycle" Cup won by a few seconds only over a thirty-three mile course traversed three times.

THE Woolwich, Plumstead, and District M.C. holds the Club Team Championship for 1922 by a win in one of the closest contested events which have ever been run for *The Motor Cycle* Cup.

The scene in the courtyard of the Rose and Crown Hotel, Tring, and the space in front of the hotel on Saturday last was the subject, as usual, of considerable local interest and keen rivalry when no fewer than twenty-seven clubs assembled to compete for the club championship this year.

At the crest of Kop Hill where a good number of spectators gathered. F. James (1,098 c.c. Morgan) and J. A. Stacey (976 c.c. Matchless sidecar), both members of the Sheffield and Hallamshire M.C. and L.C.C.

As evidence of the keenness with which the M.C.C. team trial is contested year after year, it is only necessary to call attention to the mileage which clubs will accomplish in order to participate in the event. From Yorkshire alone there were three representative clubs competing, as well as many teams from other far distant centres, but the sporting members of the Ilkley M.C. and L.C.C., mounted without exception on Scott machines, and the Bradford M.C. and L.C.C. hold the record for long distance.

### 159 Competitors.

One hundred and fifty-nine competitors assembled at the starting point, and it was observed that the sidecars were chiefly occupied by male members for time-keeping purposes. No club was leaving anything to chance. The results of the trial, in which seven teams accomplished non-stop runs, show how remarkably close several of the teams were, particularly the first three:

| Club. | Total Time Error. |
|---|---|
| (1) Woolwich, Plumstead, and District M.C. ... ... | 3m. 11s. |
| (2) Worcester and District M.C.C. | 3m. 43s. |
| (3) Nottingham and District M.C.C. | 3m. 46s. |
| (4) Coventry and Warwickshire M.C. ... ... ... | 4m. 29s. |
| (5) North-West London M.C. ... | 6m. 24s. |
| (6) Norfolk M.C. and L.C.C. ... | 6m. 42s. |
| (7) Ilkley M.C. and L.C.C. ... | 9m. 16s. |

**1922 Club Championship.—**

The scores of the Woolwich, Plumstead, and District M.C. were as follows, and the riders are to be congratulated upon a very excellent performance:

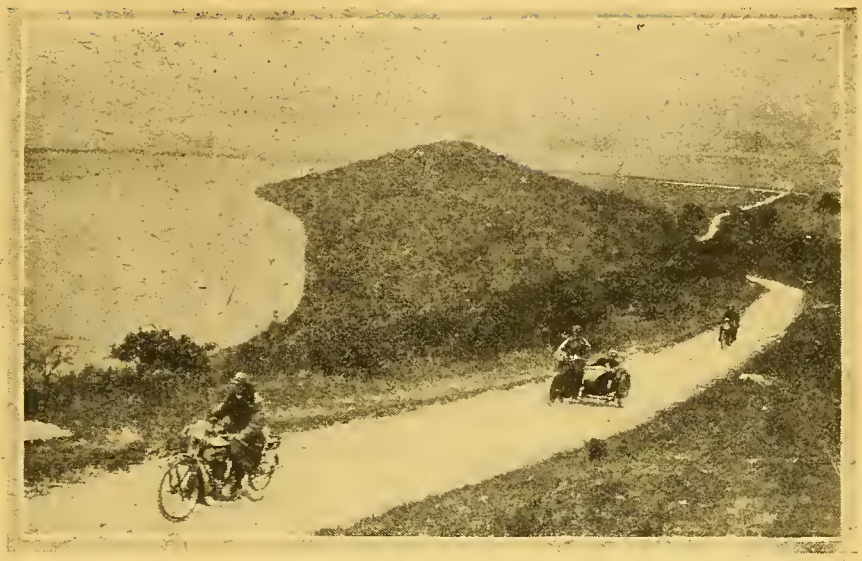
B. J. Sims (499 Triumph), 9s. error.
F. Macdonald (976 Matchless sc.), 57s. error.
E. Atkins (498 Ariel), 23s. error.
T. J. Ross (976 Matchless sc.), 17s. error.
C. Clease (499 Triumph), 1m. 9s. error.
F. J. Ellis (976 Matchless), 16s. error.

They were closely followed by the Worcester and District M.C.C., whose time error only totalled 3m. 43s., a difference of just 32s., and these in turn only beat the Nottingham and District M.C.C. by 3s., their time error amounting to 3m. 46s. The Worcester team were as follows:—

J. A. Newman (494 Douglas).
R. Brown (496 Martinsyde sc.).
J. M. Dosher (976 Royal Enfield).
E. W. Choldcroft (799 A.J.S. sc.).
J. A. Chadwick (—).
E. Williams (799 A.J.S. sc.).

### A Last Minute Change.

Rather a curious incident marked the introduction of the Martinsyde sidecar into the Worcester team. R. Brown intended riding a 499 c.c. Sunbeam sidecar in place of B. Bladder (976 New Imperial J.A.P. sc.), who was unable to compete, but on Saturday morning his gear box seized, rendering the machine unfit for use Nothing daunted, however, Reg. Brown set off on a tour of the local garages in search of a substitute, and was eventually rewarded by discovering a Martinsyde solo. Further search produced a sidecar from another source, and with this hurriedly assembled outfit he pluckily prepared to distinguish himself and his club. But his troubles were not yet over. During the last few minutes before the start, whilst demonstrating the capabilities of his new mount, the clutch cable elected to die a natural death. Even a catastrophe such as this, however, failed to vanquish him, and he eventually started—and finished—on the exhaust valve lifter. The Worcester Club ought to be, and probably are, proud to number such an indomitable rider amongst their members.



A trio of the Oxford Motor Club on Kop Hill. Observe the curious formation of the rising ground which projects into the fertile valley like a cape into the sea. N. V. Colegrove (550 c.c. Triumph), L. Avery (998 c.c. Harley-Davidson sidecar), and J. A C. Kempster (550 c.c. Triumph).

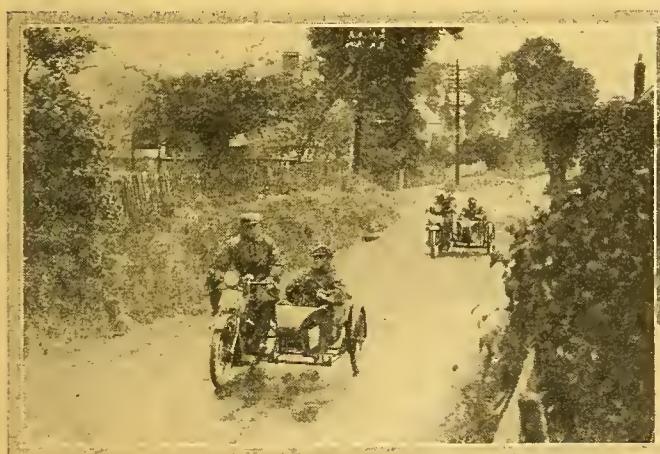
The Nottingham and District M.C.C. were represented by:—

H. Karslake (976 Brough-Superior).
I. Cohen (976 Campion sc.).
F. W. Stevenson (692 Brough).
J. R. Sylvester (698 Raleigh sc.).
G. Brough (976 Brough-Superior).
S. S. Debenham (976 Campion sc.).

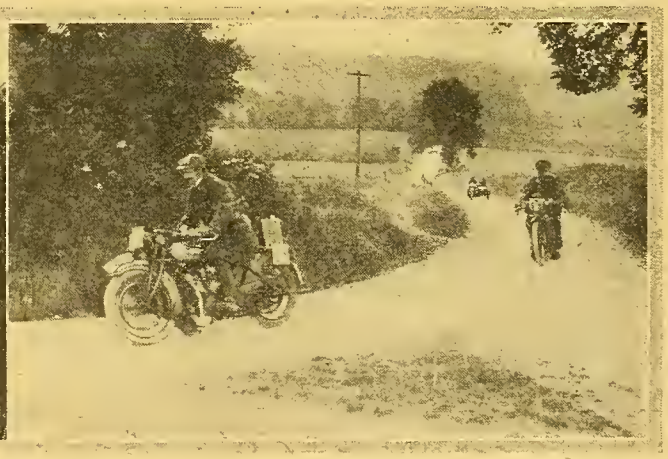
Starting about half a mile south of Tring, the course totalled 100 miles in all, competitors covering three circuits of just over 33 miles.

The roads, where the course included winding lanes and sudden hills, were bad owing to the previous dry weather; the surface being dangerously loose and very rough. We say "previous" dry weather with some truth, as no doubt the competitors will agree, because the trial was finished at about 7.30 in a mild form of flood. The weather, which had been threatening during the earlier part of the day, broke at 2.30.

From 2.30 onwards it rained without stopping, and yet to say that it rained seemed hardly to describe the exact condition of the elements. It deluged. At first it was more or less ignored, as the roads certainly required a little moisture to "settle" them, but things passed the possibility of "ignoring" when competitors splashed past, soaked from head to foot, covered in mud, and raising a miniature tidal wave as they plunged from puddle to puddle. This was a great pity as many of the riders, starting in fine weather, were hatless, and, in many cases, inadequately dressed to cope with the downpour. But such is the nature of the motor cyclist that this did not appear to trouble them in the slightest, and everybody, except perhaps the time-keeper, judges, and spectators seemed perfectly happy.



In a Chiltern village, Butler's Cross. A. S. Bagshaw (799 c.c. A.J.S. sidecar), of the Norfolk M.C. and L.C.C., and J. Hector (799 c.c. A.J.S. sidecar), of the Birmingham University.



Members of the Nottingham and District M.C.C. at the turning into Aylesbury road from Kop Hill. H. Karslake (976 c.c. Brough Superior) and F. W. Stevenson (692 c.c. Brough).

ON KOP HILL.

W. Backhouse (499 c.c. Triumph) and H. S Moorhouse (499 c.c. Triumph).

H. W. Glendinning (976 c.c. Zenith sidecar) and H. B. Browning (349 c.c. A.J.S.).

In the first round Kop Hill did not present a very serious obstacle, and quite a number of machines roared up on top gear without turning a hair. The surface this year was very loose, but some excellent climbs were made in spite of it.

**Kop Hill Not a Serious Obstacle.**

The Scotts, ridden chiefly by members of the Ilkley team, did remarkably well here, and several "Sports" Humbers made a very good show.

George Brough on a Brough Superior solo could hardly be described as dawdling on the hill. His machine with the polished petrol-tank flashed past at an amazing speed—and this at the worst part of the hill too. No. 144 of the Ipswich and District M.C.C. riding a 976 cc. Matchless and sidecar succumbed to the 1-5 gradient, that spiteful last 30 yards of the climb, and commenced running backwards, but spectators and observers came to the rescue and the machine was pushed on to the grass sidetrack with a flat sidecar tyre. C. M. Bowen (398 A.B.C.), a member of the Wallington and District M.C. and L.C.C., was forced to retire with back tyre trouble. An Enfield two-stroke belonging to the Camberley Club was making a plucky ascent when, on getting within about twenty yards of the summit, the gear lever slipped into neutral position. The rider jammed it back into gear again, but it was done too suddenly. The strain on the engine, already labouring severely, was too much, and it stopped dead. G. Bickerton (490 Norton sc.) was beaten on almost identically the same spot that finished the little Enfield.

These were the only mishaps that occurred on the hill, and it speaks volumes for the efficiency of the present-day motor-cycle that 156 out of 159 competitors should be able to make non-stop climbs on a hill of this gradient, and at the speed at which many of them took it. George Brough raised a laugh in the second round when he shot over the top of the hill between 35 and 40 m.p.h. with a cheerful "There you are then!" and disappeared in a shower of stones and grit round the next corner. Some very pleasing ascents were made by one or two of the A.J.S. machines and sidecars and the Matchless outfits as well.

Fairly early in the trial H. B. Browning (349 A.J.S.), of the Public Schools M.C.C., had the misfortune to snap his clutch cable, making some of the tricky corners none too easy to manage; in fact, he nearly came to grief on one or two occasions, but pulled out of them skilfully.

On the whole, Chalk Hill was climbed very well, taking into consideration the roughness and looseness of the surface and the difficulty of some of the corners.

A. Bowerman (220 Velocette), the only Velocette entered, as it happens, was forced to retire with magneto trouble, and was towed home about 5 miles by a non-competitor's sidecar.

**Avoiding Stops at all Costs.**

Certainly some wonderful feats of endurance are achieved by competitors during a run of this kind in order to complete non-stop runs and so gain marks for their clubs. A case in point occurred this year which is worthy of note. S. Sawer, a member of Sheffield and Hallamshire M.C. and L.C.C., riding a 633 c.c. Norton and sidecar, was unlucky enough to break a sidecar spring in the second circuit, but this was not considered a sufficient reason for retiring by any means. The sidecar passenger, to prevent the mudguard from bearing on the sidecar wheel, held it up with his hands for many miles until it seemed that after all they might yet do a non-stop run. In the end, however, they were obliged to give in.

It is interesting that S. Wright (600 Humber sc.), of the Coventry and Warwickshire M.C., has ridden in every team trial for Coventry dating from as

This year's winners of "The Motor Cycle" Challenge Cup in the M.C.C. Team Trial—The Woolwich, Plumstead, and District Motor Club. From the left E. Atkins (498 c.c. Ariel), F. J. Ellis (976 c.c. Matchless sidecar), C. Clease (499 c.c. Triumph), T. T. J. Ross (976 c.c. Matchless sidecar), B. J. Sims (499 c.c. Triumph), F. MacDonald (976 c.c. Matchless sidecar). They won by a margin of 32 seconds.

In the picturesque Chilterns; a scene on Kop Hill. H. O. Goldsmith (692 c.c. Brough sidecar), followed in the distance by E. C. Lunniss (976 c.c. Matchless sidecar) and L. C. Solomon (482 c.c. Sunbeam).

far back as the old days when trailers took the place of the 1922 sidecar. Also, P.W. Moffat (494 Douglas), of the M.C.C., has succeeded in scoring his seventh consecutive non-stop in the trial.

Complete teams at the end of the first circuit and second circuit give a fair idea of the progress of the trial. At the end of the first round the following clubs were complete:—

Sheffield and Hallamshire M.C. and L.C.C.
Coventry and Warwickshire M.C.
Leicester and District M.C.
Nottingham and District M.C.C.
Worcester and District M.C.C.
Bucks County M.C.
North-West London M.C.
Norfolk M.C.C. and L.C.C.
Woolwich, Plumstead, and District M.C.
Ilkley M.C. and L.C.C.
Public Schools M.C.C.
Lewes and District M.C.C.
Oxford M.C.

The finish of the second round saw the following teams entire:—

Coventry and Warwickshire M.C.
Nottingham and District M.C.C.
Worcester and District M.C.C.
Bucks County M.C.
North-West London M.C.
Norfolk M.C. and L.C.C.
Woolwich, Plumstead, and District M.C.
Ilkley M.C. and L.C.C.
Lewes and District M.C.C.
Oxford M.C.

As a matter of fact, the first complete team to finish the 100-mile course was the Coventry and Warwickshire M.C.C., followed by Nottingham and District M.C.C. and Worcester and District M.C.C.; then came North-West London M.C., Norfolk M.C. and L.C.C., Woolwich, Plumstead and District M.C., and Ilkley M.C. and L.C.C. Oxford M.C. would have made an eighth club finishing complete had it not been for a piece of extraordinarily bad luck. One of their members, N.V. Young (550 Sunbeam sc.), who has only one arm, dropped his spare petrol-can a few miles from home on the last circuit and stopped to recover it, thus spoiling the chance of a non-stop run.

Another little incident illustrating clearly the lengths to which competitors will go in their anxiety to secure the coveted trophy concerns one of the M.C.C. team, G. W. Nott (976 Matchless sc.). He finished the last 20 miles of the course on a flat front tyre. Although sporting in the extreme, had he but known it the ordeal could have been avoided, because F. J. Watson (796 Ariel sc.), another member of the M.C.C. team, had retired with a puncture during the first lap.

### Tam o' Shanters the Vogue.

Various styles of clothing were adopted by the competitors, and tam o' shanters of wonderful hues were immensely popular. Stocking caps were also worn, but the majority of the riders were wearing the favourite flying helmet. One sportsman, regardless of custom or anything else, carried out the trial in a Sidcot flying-suit and a battered felt hat, much to the amusement and enjoyment of some of the spectators, but there was a certain reckless air of ill-concealed triumph about the riders who had taken the precaution of wearing overalls, as they passed their less fortunate brethren, churning through the mud and water in what had once been handsome and delicately coloured golf stockings—"as now worn."

It was certainly a pity that the weather turned out as wet as it did, but it cannot be said that the rain in any way interfered with the event; in addition to this, it was not altogether unexpected, with the result that many of the competitors had set out prepared for the ducking which they received.

Amongst the other competing teams a number of individual non-stop runs were made which were highly creditable to the riders concerned, although, unfortunately, of no value as far as actual team results go. They are given below.

SHEFFIELD AND HALLAMSHIRE M.C. AND L.C.C. (holders of the trophy for 1921).—C. E. Turner (678 Martinsyde), E. Searle (349 Sheffield-Henderson), J. A. Staccy (976 Matchless sc.), E. Wheatley (550 Triumph), F. James (10 Morgan).

LEICESTER AND DISTRICT M.C.—J. Simpson (481 Scott-Squirrel), L. Baxter (494 Douglas sc.), F. Hatton (749 Douglas sc.), J. Dearden Smithie (225 Royal Enfield).

BIRMINGHAM UNIVERSITY M.C.C.—J. H. Park (349 A.J.S.), J. Hector (976 A.J.S. sc.), E. Poppe (White and Poppe).

BUCKS COUNTY M.C.—R. Pugh (550 Triumph), C. B. Smith (998 Indian sc.), R. Hewitt (494 Douglas), G. Slade (490 Norton sc.).

LUTON AND SOUTH BEDS. A.C.—C. Dickenson (498 Ariel), F. H. Burley (499 Sunbeam), C. Bourlet (498 Ariel).

HERTS M.C. AND L.C.C.—G. G. Smith (499 Sunbeam), P. H. Jones (499 Sunbeam), S. Hall (10 Morgan), H. Rear (498 Ariel).

WALLINGTON AND DISTRICT M.C. AND L.C.C.—A. B. Lavy (499 Sunbeam), E. Vallis (976 Matchless sc.), G. Gilbertson (654 Rover), G. Baxter (998 Harley-Davidson sc.).

BRADFORD M.C. AND L.C.C.—W. Backhouse (499 Triumph), W. R. Haggas (499 Triumph sc.), G. M. Townsend (555 P. and M. sc.), W. Marriott (293 Coventry-Eagle.)

LEWES AND DISTRICT M.C.C.—W. H. Law (349 Verus), E. Chandler (490 Norton), S. H. Colbourne (998 Harley-Davidson sc.), J. H. Duart (499 Sunbeam). G. E. Stacey (490 Norton sc.).

OXFORD M.C.—E. Colegrove (550 Triumph), M. Pearson (550 Triumph), L. Avery (998 Harley-Davidson sc.), J. A. C. Kempster (550 Triumph), J. G. Avery (998 Harley-Davidson sc.).

NORTH LONDON M.C.—R. W. Greaves (976 Brough-Superior sc.), L. P. Walter (550 Triumph). L. V. Freeman (976 Sunbeam sc.).

EALING AND DISTRICT M.C.C.—P. Cunningham (555 P. and M.), F. H. Douglass (749 Bradbury sc.), Hall (350 Trump-J.A.P.), J. A. Masters (993 Harley-Davidson sc.).

CAMBERLEY CLUB.—P. W. White (976 Sunbeam sc.), A. H. S. Love (490 Norton), E. O. Spence (998 Harley-Davidson sc.), G. Green (532 Scott).

BASINGSTOKE M.C.C.—G. Gammon (490 Norton sc.), W. Osmond (499 Triumph).

NEXT THURSDAY THE MOTOR CYCLE SUMMER NUMBER.

# A JOURNEY WITH AN OBJECT.

## The Midland Centre Open One-Day Trial to Bala and Back.

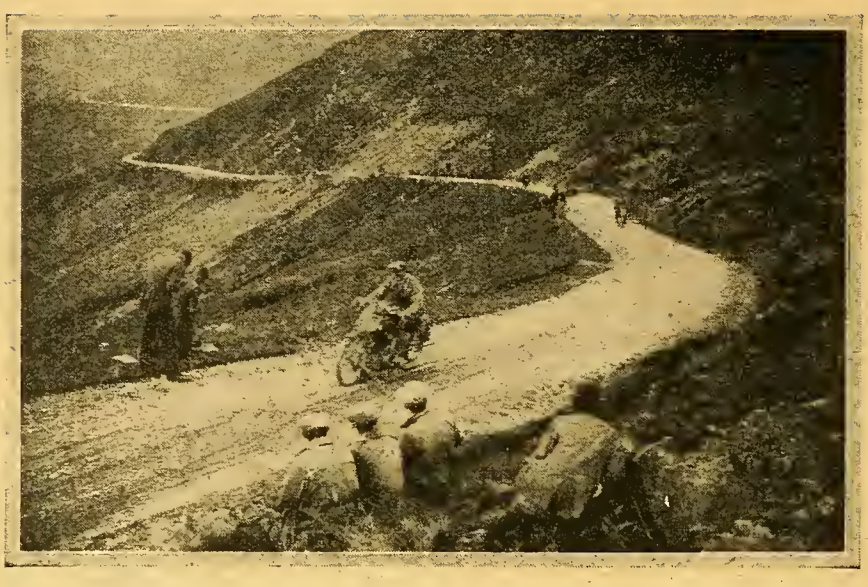
OF 85 starters in the Midland Centre (A.C.U.) One Day Trial, only nine failed to check in at the finish.

Summed up by several riders as the easiest trial in the year, the event was nevertheless not without interest, and formed a welcome change from the already too well known routes in the Cotswolds and Clent hills.

In brief the route may be described as a main road journey from Birmingham to Bala and back with two severe non-stop sections, totalling about twenty miles, thrown in. These sections, from Dinas Mawddwy to the top of Bwlch-y-Groes, and from Bala to Lake Vyrnwy, over the Hirnant Pass, were the object of the long trip, and under the prevailing conditions of mist and torrential rain proved a severe contrast to the otherwise easy outward and homeward trips. True, a third observed hill (Lincoln Hill,, near Ironbridge) was included, but after the Welsh passes its steep, dry surface was a negligible quantity.

### An Optimist.

Amongst the starters at the "Parson and Clerk" at Streetley, on the Chester Road, were one or two interesting machines. No. 1 was a 2 h.p. Argson invalid's chair. Its owner was undoubtedly a sportsman, but if he took the trial seriously he was also an optimist. The vehicle is a very neat little concern, with a tiny two-stroke engine geared to the rear axle, all gears being enclosed in an aluminium case. The suitability of this little three-wheeler in its own particular sphere was amply proved by the fact that it toddled merrily along the road at something below the set average for a very considerable distance, and though we lost sight of it some sixty miles from the start, for all we know it may still be sticking it somewhere round the course. George Dance, on his T.T. Sunbeam, was trying out a Senspray carburetter and also a frameless saddle supported on leaf springs both front and rear. W. G. Hough rode a Diamond-B. and S. instead of the A.B.C. on which he was entered, and Frank Smith appeared on a 925 c.c. Clyno and sidecar. The route through Brownhills, Shrewsbury, Welshpool, Cann Office, and Mallwyd to Dinas Mawddwy is fortunately well known, so that the almost entire lack of route marking caused but little trouble. On the return journey, however, in spite of a rather more liberal display of "Dunlop" arrows, we came across several groups discussing possible roads, and a few more arrows would certainly have been beneficial. Seventeen miles beyond Shrewsbury was the first time check, and large groups of riders were waiting outside so as to run in on time. Near Welshpool, typical Welsh scenery and also typical Welsh weather were encountered, a light rain beginning to fall, which by the time the non-stop section was reached had converted the surface of the narrow lanes into a treacherous slime.



Bwlch-y-Groes is one of the most famous test hills in Great Britain. This pass, which commences with an acute bend on a single figure gradient and rises 1,790 feet in two miles, is considered to be the most fair and severe test for air cooled engines.

Bwlch-y-Groes, with its two miles of steady gradient averaging about 1 in 7, still remains one of the most fair test hills in the country, and since the last half-mile is also the steepest there is but little chance for an engine in poor tune.

### On Bwlch-y-Groes.

On this occasion the performances on the top steep stretch were characterised by a few surprising failures, an average performance by the majority, and one or two outstanding climbs, notably those of A. Webster (349 Calthorpe sc.) and T. H. Weaver (269 Sirrah sc.). Besides these all the New Hudson, T.B., and Morgan three-wheelers climbed well, and further first-class ascents were made by B. Kershaw (249 New Imperial), J. T. Bashall and A. A. Symes (678 and 496 Martinsydes), R. W. Duke (499 Triumph), R. E. Pugh and Mrs. Janson (211 Levises), H. Stretton-Ward (499 Triumph), A. Bennett and G. Dance (499 Sunbeams), W. Hough (349 Diamond-B. and S.), T. Whalley (349 Massey Arran), J. Watson-Bourne (976 Brough-Superior), A. R. Evans (499 Sunbeam), J. N. Roberts (249 New Imperial), B. Aldridge and H. V. Collings (976 Brough-Superiors), P. Platts (688 Coventry Victor), the Connaught team, and G. Kuhn (595 Douglas). Two of the little 225 c.c. Sun-Vitesses also climbed wonderfully, but W. Parkes, on a similar machine, was in trouble and had to run.

Of the sidecars H. G. Uzzell (976 New Imperial), W. H. Bashall (678 Martinsyde sc.), F. W. Giles (800 A.J.S. sc.), T. F. Blumfield (796 Ariel sc.), were the best, though P. W. Bischoff (550 Sunbeam sc.), Frank Smith (925 Clyno sc.), and L. A. Bees (598 Beardmore-Precision sc.) put up excellent performances. Amongst the failures were: F. Downs (349 Hobart), T. L. Handley (398 A.B.C.), H. G. Catterall (596 Indian-Scout), and A. T. Wilson (269 Monopole), while on the winding descent to the main Bala road B. Aldridge's Brough-Superior was being pushed along.

### Officials in Hiding (?)

There had been mist and rain during most of the ascents, but during the lunch stop at Bala rain began to fall heavily, and steadily increased on the homeward journey till at Lake Vyrnwy the downpour assumed the proportions of a cloudburst, and the roads were under water for long stretches. Under these conditions the long, rough, and gully-besprinkled ascent of the Hirnant Pass was most trying. If there were any observers on this hill during the early climbs they were so well hidden as to be invisible, and it is to be hoped that they were present, as it seems a pity to take competitors a 190-mile trip for the purpose of climbing two severe hills and then to leave one unobserved. It is true that there were officials on the reverse slope, which was almost more trying for the rivers of water flowing down the hill made it impossible to pick a path. Near the foot of the descent the surface was appalling, and many riders steadied with their feet, and there were several stops in the prohibited section for flooded magnetos and drenched sparking-plugs. Most of these passed unnoticed.

The Hirnant Pass, which was included in the 1919 Six Days' Trials, is now in

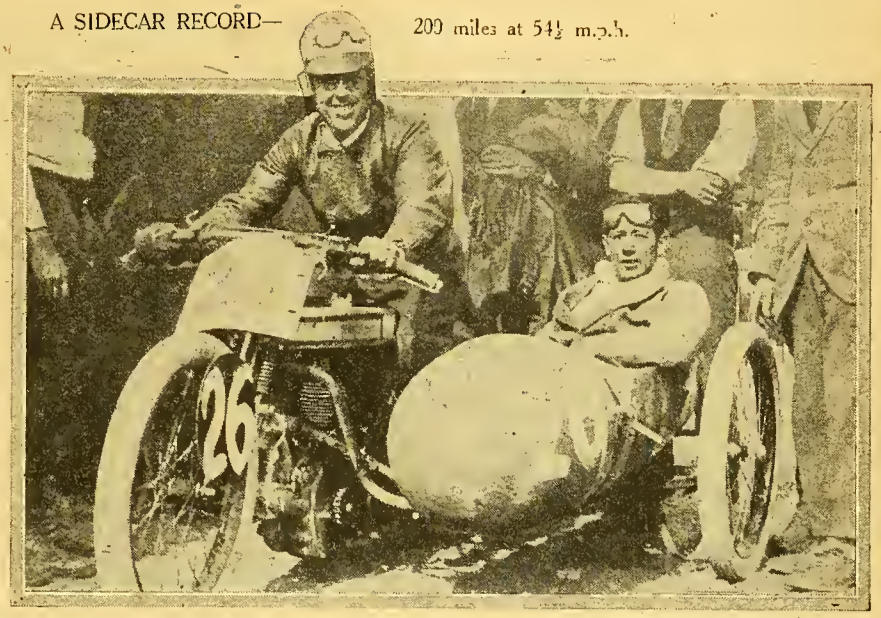
**A Journey with an Object.—** poor order, and since the surface is rough and there is a considerable drop on the right-hand side, it is not a place to practise passing. Near the top the gradient is fairly severe, but not sufficiently steep to cause serious trouble.

After the fearful downpour near Lake Vyrnwy the rain eased off and stopped, and the journey home was without much incident. Near Shrewsbury, however, W. Hadfield (349 Raleigh), who had previously experienced magneto trouble, fell on rounding a corner and damaged his fork and front wheel. He was forced to retire, but though bruised and shaken he was not seriously hurt. Soon after leaving Shrewsbury a right-hand turn led to Ironbridge and Lincoln Hill, which as previously mentioned was not a very severe test, though the gradient is considerable. Onward thence to Bridgenorth and along the Stourbridge Road led to the finish at the Stewponey Hotel, where the checking-in process was well and expeditiously handled.

Of those who failed to finish to time the case of Hadfield has just been mentioned. It was particularly unfortunate, as it spoiled the fine team performance of his stable companions Hugh Gibson and F. W. Viles. F. Downs (349 Hobart) rode on No. 13, and his engine was badly out of time, so he threw his hand in at Bwlch-y-Groes. H. R. Millington (269 Federation) had not much power in hand as he crept over the summit of the hill, and his engine did not sound healthy, but C. Webb (269 Robust) climbed well, and the cause of his delay was unknown. Wilson (269 Monopole) was in trouble on the hills, Aldridge (Brough Superior) struck trouble on the descent to Bala, and W. H. Bashall (678 Martinsyde sc.) struck a patch of tyre trouble directly after the lunch stop, and was last seen festooned with tubes and with two wheels detached. S. R. Philpott (678 Martinsyde sc.) finished to time, but reported losing his watch during the morning run, and T. H. Weaver (269 Sirrah sc.) pluckily finished with a badly damaged sidecar. The fearful surface after the descent of the Hirnant Pass proved too much for his little sidecar frame, which was badly damaged at this point of the run, with the result that at Ironbridge the axle parted, and some thirty miles were covered in this condition.

It is difficult to summarise an impression of the trial as a whole; one hundred and ninety miles is a long way to take the entrants for only two severe hills, but on the other hand, it was a trip that might have been undertaken by any enthusiastic motor cyclist, and freak surfaces were confined to a few yards, while both Bwlch-y-Groes and the Hirnant Pass are hills worth going a long way to try. The reason for the sparse route-marking may have been due to laudable motives of economy or some other motive, but it is not an experiment which should be repeated, for, though everyone succeeded in following the course, there was considerable delay at certain points, which led to much making up time at others.

A SIDECAR RECORD— 200 miles at 54½ m.p.h.



G. H. Tucker who, on his 588 c.c. Norton sidecar, won the recent 600 c.c. 200 mile sidecar race at Brooklands, and at the same time broke the 200 mile record in Class F. His protest against disqualification was upheld by the committee, and consequently E. A. Bridgman (499 c.c. Indian sidecar), who was awarded the race in the first instance, takes second place.

Competing against, amongst others, F. W. Dixon and E. Searle, R. T. Cawthorne (490 c.c. Norton) made fastest time of the day (80 m.p.h.) at the Bridlington speed trials on Wednesday of last week. Cawthorne winning the sidecar class.

## TWELVE-HOUR 500 c.c. RECORD BROKEN.

ON Monday, June 19th, a 490 c.c. Norton, ridden by D. R. O'Donovan and R. N. Judd, broke the 300 mile, 5 hours, 600 mile and 12 hour records. The two riders changed over about every thirty laps, and the figures would have been considerably better, but for delays due to tyre repairs and a broken valve rocker. The machine was a side valve model, and Dunlop tyres, Speedwell oil, C.A.V. magneto and Shell Spirit were used. The times and distances are as follows :—

| | | |
|---|---|---|
| 300 miles | 4h. 48m. 10⅗s. | 62.46 m.p.h. |
| 600 miles | 10h. 22m. 52⅖s. | 57.79 ,, |
| 5 hours | 313 miles 365 yards | 62.63 ,, |
| 12 hours | 683 miles 1,651 yards | 56.99 ,, |

## A NEW 24-HOUR RECORD.

WHILST English riders have been busy breaking records in the Isle of Man and at Brooklands, a remarkably fine performance has been achieved in America. Wells Bennett, mounted on a four-cylinder Henderson (De Luxe Model), celebrated Decoration Day on the Tacoma speedway by completing 1,652.54 miles during twenty-four hours' continuous riding, at an average speed of 65.1 m.p.h. His speed for the first 1,000 miles averaged 63 m.p.h., whilst at some periods of the ride he touched 76 m.p.h. Bennett also succeeded in creating a new time record on the 1,000 miles, covering this distance in 15h. 47m. 15s., the previous record, set up by Baker, being 16h. 14m. 15s. The track, which is two miles all but 254 feet, was covered 806 times in the twenty-four hours. It is interesting to note that owing to the poor condition of the track, which is a board one, six rear wheels were required during the event.

# CURRENT CHAT.

(continued from p. 883)

### Caught Napping.

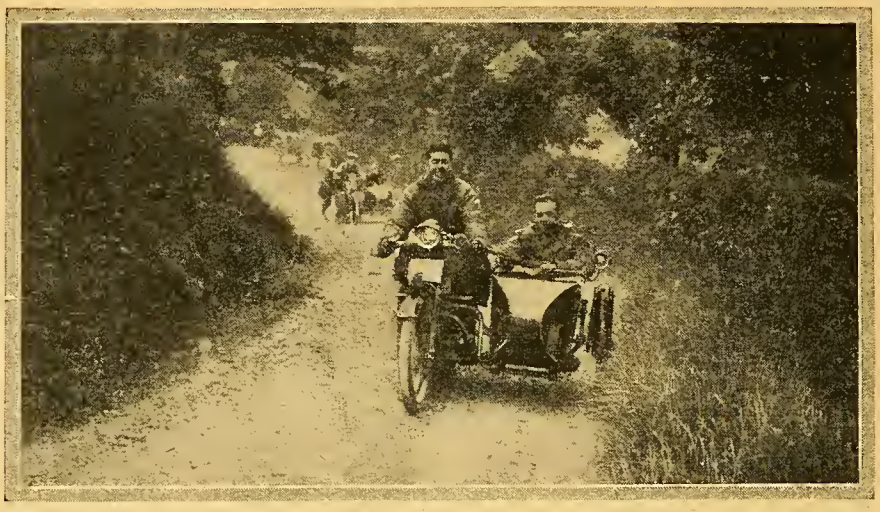
Sudden showers, drenching downpours, and gusty winds found many riders and their passengers unprotected against cold and wet over the week-end.

### Misleading Advertisements and the T.T.

A stand against the practice of certain motor cycle manufacturers in issuing misleading advertisements in connection with the classic A.C.U. competitions, is being taken by the organising body. Several advertisements bearing upon the results of the Tourist Trophy Races have been observed, to which strong exception is taken. These advertisements are so worded that to the casual reader it would appear that the machines advertised gained successes, which, in fact, they did not; in one case, indeed, the machine advertised was not even entered for any of the T.T. Races.

### Clyno in the Field Again.

After a lengthy absence from competition work, the Clyno machines will once again be prominent in motor cycle events; the new 925 c.c. spring-frame outfit has already made its appearance in the hands of that famous hill-climber of the past, Frank Smith, who is managing director of the reconstructed Clyno Engineering Co., of Wolverhampton. Mr. Smith is being assisted by two other well-known riders, G. E. Stanley and J. Cocker. Both the 225 c.c. two-stroke lightweight and the 925 c.c. sidecar outfit have been much improved, and will be dealt with in our columns in the near future.



Out of some thirty Sunbeam private owners who competed in a trial organised by the Birmingham depot for that make of machine—Watsons, Chamberlain Square—only seven retained clean sheets. Eventually the awards went to W. H. Fortington (sidecar) and E. M. Tomkinson (solo). C. D. Jones making a good ascent of Flagstaff Hill.

### A Family Outfit.

Elsewhere in this issue is described a family three-wheeler which provides the same accommodation as the "three-four" seater cars. It should appeal strongly to the "family" driver.

### British Team in International Six Days.

It has been previously announced that the three T.T. winners—G. S. Davison (Levis), T. M. Sheard (A.J.S.), and A. Bennett (Sunbeam)—had been invited to represent England in this trial. The invitation has been accepted by the makers of the machines concerned.

### Local Support.

In the team trial last Saturday all members of the Nottingham team rode machines of local manufacture, as did the representative of the Coventry and Warwickshire Motor Club and the Ilkley M.C. and L.C.C.

### To Keep the Sport Clean.

To avoid the possibility of further confusion, the A.C.U. is approaching the British Motor Cycle Racing Club with a view to preventing in future years certain manufacturers advertising successes in the Brooklands T.T. Race in such a way as to imply that the successes were gained in the classic road contests. Next year the B.M.C.R.C. will probably alter the title of its track race open to T.T. machines.

Two riders well known in Scottish trials circles: R. Wilson (349 c.c. A.J.S.) and R. Watson (496 c.c. Martinsyde) in Baytswood Square, at the start of the Glasgow Western M.C.C. twelve hours reliability trial.

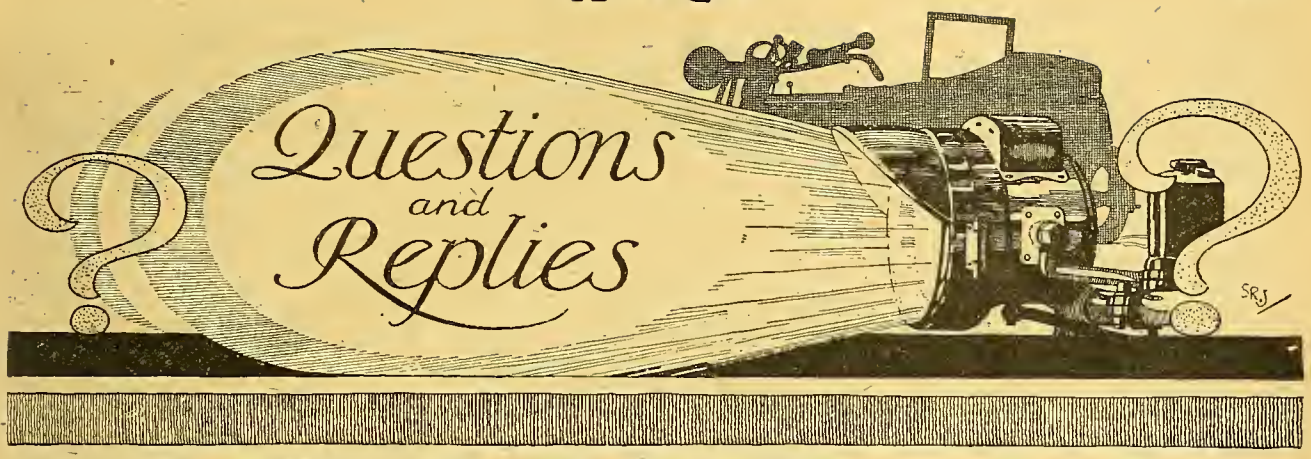
SMALL CAR PROGRESSION

*"THE AUTOCAR"—published from the offices of "THE MOTOR CYCLE" and conducted on the same enterprising lines—is the complete automobile journal embracing small, medium, and large cars. Every motor cyclist contemplating the purchase of a light car should read*

The Autocar

Every Friday **4d.**

*Founded in 1895, "THE AUTOCAR" is the largest and most successful automobile paper and enjoys the greatest circulation. It is universally accepted as the representative British motoring journal.*



A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 2d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

### BATTERY CHARGING FROM MAGNETO.

Please tell me if I can charge a 4 volt accumulator off the magneto, and if so, where can I get the necessary fittings.—W.S.C.

You cannot charge an accumulator from a magneto unless some special form of commutator or low tension collector giving a uni-directional flow of current is used; that employed in the B.T.H. Sparklite equipment is an example. It cannot be applied to any kind of twin-cylinder motor cycle magneto.

### OLD ENGINE VIBRATES BADLY.

How does one test the balance of a 2¾ h.p. Precision engine (single-cylinder, four-stroke), as it vibrates badly at speeds over 15 m.p.h. ?—E.W.H.

If the engine has not been altered since it left the makers the vibration is probably due to wear of the bearings, or it may be caused by the engine not being securely fixed in the frame. Examine the engine-holding bolts and also the holes through which they pass, as both may be worn slightly. The fitting of a non-standard piston, of course, would alter the balance if the weight was not carefully adjusted to coincide with that of the old one. To test balance accurately would probably be beyond you, and your best plan would be to return the engine to the makers if none of the above suggestions provide a clue to the trouble.

### GEAR RATIOS.

My machine has gears similar to the P. and M., having two sprockets on the engine shaft with 18 teeth on each. On the countershaft there are two sprockets and one belt pulley; the high gear has 40 teeth, the low gear has 28 teeth, and the pulley is 6in. in diameter, but the belt sinks in the pulley and makes it only about 4½in. The belt rim on back wheel is 20in. As far as I can judge the countershaft belt pulley and back wheel rim give a ratio of about 4½ to 1, and I want a top gear of 5¼ to 1.—A.E.J.

The present gear ratios are 7 to 1 and 10 to 1 respectively; if you wish to have a 5¼ to 1 top gear you need a 24-tooth sprocket on the engine shaft driving to the 28-tooth sprocket on the countershaft. You will understand, of course, that if you fit a new belt which rides higher in the countershaft pulley the gear will be raised. It is very unlikely that the final belt drive will be satisfactory specially on low gear, if the effective diameter of the countershaft pulley is only 4½in.

### SPARK GAPS.

Are the "spark intensifiers" at present on the market much use, and have they any detrimental effect on the magneto?—M.W.

Spark intensifiers or gaps will not do any harm to the magneto, and, although they do not necessarily improve the running, they may be of considerable assistance in preventing the sooting up of the sparking plug, or the short circuiting of the points in an over-lubricated cylinder.

### PETROL-PARAFFIN MIXTURES.

A friend states that it is possible to run my two-stroke on paraffin oil, so I tried it by squirting some into the air intake after starting the machine on the stand. It ran as long as the paraffin lasted. Do you think that if I run my machine on half petrol and half paraffin it would make any difference to the lubrication or to any other part of the machine?—W.W.

It is quite possible to run a motor cycle engine on paraffin, but it is not advisable, as the running is usually very harsh. It is necessary, of course, to use petrol for starting purposes, and it is also advisable to retard the ignition considerably to obtain smooth running. A mixture of half petrol and half paraffin is fairly satisfactory, but the running is still rather harsh. During the war many machines were run on paraffin and paraffin-petrol mixtures, but no one did this for choice.

### CRANK-CASE JOINTS LEAKING.

(1.) The small bolt-holes of my Triumph crank case leak lubricating oil. Could this be stopped? I have already fitted leather washers, and still there is no change after tightening up. (2.) Is this the cause of the engine overheating?—J.P.

(1.) Unless you are prepared to dismantle the crank case completely and make sure that it is properly jointed, preferably using seccotine or shellac as a jointing material, there is probably no permanent cure. (2.) The leakage of oil would have to be excessive before it caused overheating, and it is scarcely likely to escape through the bolt-holes to such an extent as to cause the engine to run dry.

## Important Dates.

**Sat., July 1st—East S. Wales Centre A.C.U. Open Speed Trials.**
**Wed., July 5th—Eastern Centre A.C.U. Open Speed Trials.**
**Sat. July 8th—M.C.C. Meeting at Brooklands.**
**Wed., July 12th—French Grand Prix.**
**Sat., July 15th—B.M.C.R.C. Members' Meeting at Brooklands.**
**Sun., July 23rd—Belgian Grand Prix.**
**Fri., July 28th, to Mon., July 30th—Anglo-Dutch Trial in Holland.**
**Thurs., Aug. 3rd, to Wed., Aug. 9th—International Six Days Trials.**
**Sat., Aug. 5th, and Mon., Aug. 7th—Irish Two-day Open Trial.**
**Mon., Aug. 7th—West S. Wales Centre A.C.U. Open Speed Trials at Pendine.**
**Sat., Aug. 12th—B.M.C.R.C. Members' Meeting at Brooklands.**
**Sat., Aug. 12th—North Wales Centre A.C.U. Open Reliability Trial.**
**Sat., Aug. 12th—Motor Cycle Races in Phœnix Park, Dublin.**
**Mon., Aug. 21st, to Sat., Aug. 26th—A.C.U. Six Days Trials.**
**Sat., Sept. 16th—The Scott Trial.**
**Sat., Sept. 23rd—500 Mile Race at Brooklands.**
**Sat., Oct. 21st—B.M.C.R.C. Championship Meeting at Brooklands.**

### ENGINE REPLACEMENTS.

[?] Having recently purchased new pistons for a 595 c.c. Douglas, I find the gudgeon pin boss (inside piston) is shorter on one side than the other. Is there a particular way to fit these pistons, and what is the reason for this? Also I have new gudgeon pins and bushes, and find the gudgeon pins will not go into the bushes. Are the bushes reamered out after being fitted into the connecting rods?—T.C.

The connecting rod small ends on this engine are slightly off-set in order to bring the pistons as near to the centre line as possible, and this necessitates the bosses inside the piston being of unequal length; examination of the parts when the crankshaft assembly is replaced in the crank case will enable you to replace the pistons correctly. The bushes usually need to be reamered after they are fitted into the connecting rods.

## EXPERIENCES WANTED.

*Readers' replies to questions published under this heading should be addressed c/o The Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, when they will be forwarded direct to the querists concerned.*

W.G. (Stockton-on-Tees).—Method of reducing valve clatter on 557 c.c. B.S.A.

G.H.S. (Tipton).—Gibbons cycle car.

R.M.H. (Gerrards Cross).—4.5h.p. New Hudson and sidecar. 654 c.c. Quadrant and sidecar.

"L.C." (Liverpool).—Orto windscreen.

"J.T.K." (Battersea).—225 c.c. Royal Enfield with featherweight sidecar. Strength of frame, hill-climbing capacity.

"J.H.D." (Rochester).—499 c.c. Rudge-Multi. Lubrication system, belt slip and wear, speed.

"J.E.B." (Streatham).—Indian Scout and Harley-Davidson flat twin, solo, with pillion.

"L.C." (Wavertree).—4¼ h.p. Beardmore-Precision. solo and sidecar.

"J.S.H." (Northwich).—654 Hazlewood-J.A.P. and sidecar.

"G.A." (Devon).—225 c.c. Royal Enfield; 293 New Imperial; 398 A.B.C.

"G.W.-T." (Westcliff).—770 c.c. Zenith-J.A.P. (direct drive). "Quadruple belt. Wear and grip on low gear.

"M.A.C." (Kent).—318 c.c. Dalm, power, speed, and petrol consumption.

"F.V.D." (Bradford). — 499 c.c. Triumph. Showell or Best mechanical oil pump; W.S.R. variable jet adaptor.

"X.Y.Z." (Hendon).—490 c.c. Norton, 494 c.c. Douglas; 499 c.c. Sunbeam. Hill-climbing ability; suitable gear ratios for touring in hilly country.

"K.P.G." (Golders Green).—499 c.c. Triumph, suitability of 3-jet Binks carburetter; correct jets for fast touring.

"H.H.C." (West Lothian).—976 Royal Ruby and sidecar; 698 c.c. Raleigh and sidecar; 598 Beardmore-Precision and sidecar. Dependability of frames, etc., for touring work.

"C.F.B." (Rutherglen). — McKenzie Lightweight. Petrol consumption; correct proportions of petrol mixture; reliability.

A NEW HOME FOR THE WESTERN M.C.C., GLASGOW. Following the lead of other big motor cycle clubs the Western M.C.C., of Glasgow, has now been formed into a limited company and will in future be known as the Scottish Western M.C., Ltd.

## READER'S REPLY.

### CHANGES TO A TWO-STROKE TWIN.

As I purchased a second-hand "Scott" sidecar 15 months ago, and experienced the same trouble as "P. O.," perhaps my solution of the problem might interest him?

If "P. O.'s" engine is later than 1912 he will find two plugs with hexagon heads screwed into the cylinder-heads. I first of all removed these and replaced them with two compression taps, short type, with sparking plug threads; these will enable him to prime each cylinder before starting. I then removed the leather washer from a petrol can cap and trimmed it to an exact fit in the main air intake cap; finally, I bored a small hole in the centre of this washer and inserted a loop of wire to project on the outside, and fastened the washer to the carburetter by means of a valve-cap chain so that it cannot be lost.

When starting I prime both cylinders and place the leather plug in the air intake cap and open the throttle about half way; the engine then invariably starts at first or second kick.

"P. O." should not attempt to open the extra air inlet until the engine is well under way; he should also verify his jet sizes. I find 000, 2, and 9 the best for sidecar work, and a "long reach" plug to project slightly into the combustion chamber might improve matters.—F.N. 2861.

SPARKLETS

### T.T. Machines on Exhibition.

Davison's Levis and Langman's Scott machines are on exhibition during the present week at Godfrey's, Ltd., 208, Great Portland Street, London, W.1.

### A Saddle and Tank Cover.

Delivery of the "Alldry" combined saddle and tank cover is now being made at a cost of 7s. 6d. This article is supplied by Mr. G. J. Coverly, 25, Deyncourt Gardens, Upminster, Essex.

### An Efficient Magneto.

An "M-L" magneto was used by M. Cottin (249 Velocette) when he secured the second position on the Circuit de Montargis, a distance of 167½ miles. His average speed was 46 m.p.h. He also covered the fastest lap at 49½ m.p.h.

### Valve Coolers.

In the 200 mile sidecar race at Brooklands on June 17th, D. H. Davidson (998 Indian sc.), winner of the class not exceeding 1,000 c.c., used spiral valve coolers manufactured by Beard and Fitch, Ltd., 34, Aylesbury Street, London, E.C.

### Price Reduction.

We have received a communication from Buckland and Burrell, engineers, Foots Cray, Kent, to the effect that the Burland dimmer and economiser, described in our issue of March 30th, has been reduced in price to 9s., inclusive of gasbag.

### A Good Performance.

A folder has been issued by Douglas Motors, Ltd., Kingswood, Bristol, in commemoration of C. G. Pullin accomplishing 100.61 m.p.h. on a 500 c.c. machine on March 23rd last. It is illustrated with a facsimile of the Brooklands certificate and various photographs.

### Agents for Spare Parts.

Being aware of the difficulty of obtaining spare parts by certain riders, the Villiers Engineering Co., Ltd., Blakenhall, Wolverhampton, has started a spare part service. In most important towns motor cycle agents have been appointed, and the prices of the spare parts are now as low as possible.

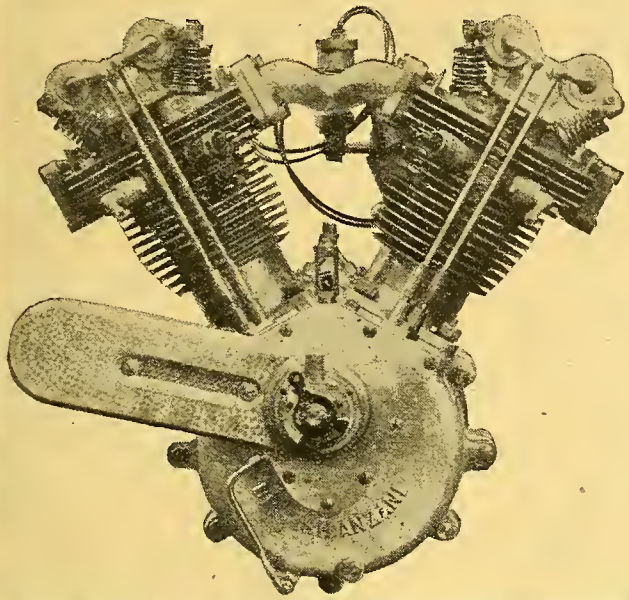
### Catalogues Received.

HUGH MASON AND CO., LTD., N.U.T. Works, Derwenthaugh, Newcastle-upon-Tyne.—An illustrated booklet giving full particulars and prices of the various models of N.U.T. motor cycles.

Light Production Co., Ltd., 60-66, Rochester Row, Westminster, S.W.—A catalogue of L.P.C. piston rings and price list of gudgeon pins.

F.R.S. Lamps, Ltd., Beam Works, Vere Street, Birmingham.—An illustrated leaflet containing particulars and prices of their various productions in lamps, horns, and other accessories.

# Another Record Falls to the Invincible British Anzani Engine



8h.p. Overhead 8 valve British Anzani Engine Standard Sports Model

ON June 14th, 1922, COLONEL STEWART riding a Trump machine fitted with an **8 h.p. British Anzani Engine** broke the 2 hours record in Class E. 1,000 c.c.

**SPEED 78·85 m.p.h.**

# A COLONIAL'S OPINION

**of the FAMOUS**

**"JAMES"**

*Durban, South Africa.*
*May 29th, 1922.*

*Dear Sirs,*

*As a constant user of one of your 4¼ h.p. motor cycles and sidecar, I would like to express my satisfaction of the serviceability of this mount. I have had the machine constantly on the road for the last three years in all weathers and on roads of all descriptions, and although at times it has not been possible to give the machine any attention, it has never failed me and repairs have been very light.*

*I have on occasions carried a load of 30 cwt. to the highest point of the Berea (the residential suburb of this city) on top gear, which takes some beating.*

*With nothing to say except in praise of your machines.*

*I am, yours faithfully, R. T. Johnson.*

## THE JAMES CYCLE Co., Ltd., GREET, BIRMINGHAM.

LONDON SHOWROOMS—22, HOLBORN VIADUCT, E.C.1.

# Extended manufacturing facilities and a huge turnover enable us to cut Ferodo Prices

## by 10%

***The quality remains the same.***

On and after July 1st the list prices of FERODO BONDED ASBESTOS, FEROBESTOS, AND FERODO FIBRE will be reduced by 10%.

The reduction is solely due to the savings effected by large production and extended manufacturing facilities.

The quality of Ferodo Friction Linings will remain as before—the very best possible—and this reduction in price is not being made at the expense of quality. Our first principle has always been and always will be to put the finest possible materials into our product, and upon this principle the Ferodo reputation has been built. Ferodo Fabrics are just as superior to competitive materials to-day as they were 10 years ago.

It may be that Ferodo Fricton Linings are slightly higher in price than certain competitive materials, colourable imitations of our own; but the extra durability and the perfect reliability of Ferodo Linings repay the extra first cost a hundredfold. Hundreds of thousands of motor drivers all over the world show their appreciation of this fact by their continuous use of Ferodo Friction Linings for Brakes and Clutches.

***See the name on every piece.***

## BIRMINGHAM

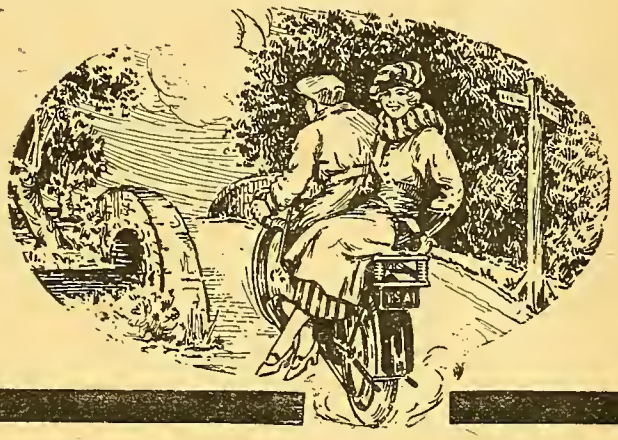
Makers of the famous Tan-Sad Chair and Pram (F. H. Headley's Inventions).

# "Safety First" then Comfort

The *safety* of Pillion Riding depends entirely upon the *Seat*. That "cushion on the carrier" method is dangerous both to body and health. The safe way—the only safe way—is the Tan-Sad way.

Fit a Tan-Sad Pillion Seat to your Machine. The responsiveness of its springing to every pothole, to every bump, frees the Pillion rider of the possibility of nerve-wrack, and obviates the Driver's risk of jolting his passenger off the Machine—even on the most potholed roads.

And isn't your passenger's *comfort* as important as your own? *Your* seat is sprung, isn't it? ... Well, then, for safety's sake, for comfort's sake—fit a Tan-Sad.



# For 20 Years—

FOR twenty years Millford Sidecars have been famous for quality and comfort.

There are 8 models for 1922.

A Millford Sidecar costs from £22. You know what your favourite solo machine costs. Add the two and see what you save compared with the price of a *Combination*.

# MISCELLANEOUS ADVERTISEMENTS.

## PRICES.

**ADVERTISEMENTS** in these columns —First 12 words 3/–, and 3d. for every additional word. Paragraphs of under 8 words are charged double rate. Each paragraph is charged separately. Name and address must be counted. Series discounts, conditions, and special terms to regular trade advertisers will be quoted on application.

Postal Orders and Cheques sent in payment for advertisements should be made payable to ILIFFE & SONS Ltd., and crossed & Co. Treasury Notes, being untraceable if lost in transit, should not be sent as remittances.

All advertisements in this section should be accompanied with remittance, and be addressed to the offices of "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4. To ensure insertion letters should be posted in time to reach the offices of "The Motor Cycle," by the first post on Friday morning previous to the day of issue. Advertisements that arrive too late for a particular issue or that are crowded out will automatically be inserted in the following issue unless accompanied by instructions to the contrary.

All letters relating to advertisements should quote the number which is printed at the end of each advertisement, and the date of the issue in which it appeared.

The proprietors are not responsible for clerical or printers' errors, although every care is taken to avoid mistakes.

## NUMBERED ADDRESSES.

For the convenience of advertisers, letters may be addressed to numbers at "The Motor Cycle" Office. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charge, which must include the words Box ooo, c/o "The Motor Cycle." Only the number will appear in the advertisement. All replies should be addressed No. ooo, c/o "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4. *Readers who reply to Box No. advertisements are warned against sending remittance through the post except in registered envelopes; in all such cases the use of the Deposit System is recommended, and the envelope should be clearly marked "Deposit Department."*

**In the case of motor cycles offered for sale under a box number, as it is unusual for these to be sold without first being inspected by the intending purchaser, advertisers will facilitate business by embodying in their advertisements some mention of the district in which the machine offered may be seen and tried.**

## DEPOSIT SYSTEM.

Persons who hesitate to send money to unknown persons may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Motor Cycle," both parties are advised of this receipt.

The time allowed for a decision after receipt of the goods is three days, and if a sale is effected we remit the amount to the seller, but, if not, we return the amount to the depositor. Carriage is to be paid by the buyer, but in the event of no sale each party pays carriage one way. The seller takes the risk of damage in transit. For all transactions up to £10, a deposit fee of 1/- is charged; on transactions over £10 and under £50, the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6 and on all transactions over £100, 1%. All deposit matters are dealt with at Dorset House, Tudor Street, London, E.C.4, and cheques and money orders should be made payable to Iliffe & Sons Limited.

The letter "D" at the end of an advertisement is an indication that the advertiser is willing to avail himself of the Deposit System. Other advertisers may be equally desirous, but have not advised us to that effect.

## SPECIAL NOTE.

**Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post.**

MANUFACTURERS' STOCK

MAKINKOT BRAND

*TO BE CLEARED.*

**Fawn double texture, interlined rubber,**

MOTOR SUITS

**THESE suits are made of Fawn double texture cloth, interlined rubber.**

**The seams are cemented, sewn and taped, making these absolutely waterproof.**

**Will stand any amount of hard wear.**

**The jackets are made double-breasted, with belts and wind cuffs.**

**The Motor Leggings are made fastening with clips and straps, and have wind gussets in leg.**

**These suits actually cost over 30/- to manufacture without any profit, but we have several thousands to clear.**

Every suit is guaranteed absolutely waterproof, and should these not meet entirely with your approval, we guarantee to return your money in full, if returned within seven days.

**SPECIAL PRICE,**

**29/11** Carriage 1/- extra.

We have also several thousands heavy Twill Suits to offer. These are made of the heavy Twill used for making Motor Hoods, and are one of the finest suits made for motor cycling, interlined rubber. They are made with sewn and cemented seams, and taped, also the seams of these suits are striped, making these garments absolutely waterproof, and we are prepared to give a guarantee that these are absolutely impossible for water to penetrate through. The Motor Leggings are made in the same way with wind gussets, fastening with clips and straps. The Suits are in sizes 34, 36, 38, 40, 42 and 44 chest, lengths inside leg are 27, 29, 31. Please state when ordering by post, measurements of chest, length inside.

50/- Carriage 1/- extra.

# WHY YOU SHOULD WRITE US

If you are buying a Motor-Cycle or Light Car, either now, or at some time—we shall be glad to hear from you. ¶ We believe that our service, our resources, our "out-of-the-rut" way of doing business can be of help to you; that we can save money for you, and give you a measure of satisfaction in any purchase you may make from us that will come to you as a pleasing revelation.

Therefore we ask you to let us hear from you. Of course, we want to sell you a machine, if we can—but more than that we hope to have the pleasure of adding YOUR name to the already very long list of those who—from all over the British Isles—have come to Layton's—and having come once have come again and tell their best friends to do likewise.

¶ We have these 1922 models for earliest possible delivery:—

**ARIEL, B.S.A., BROUGH-SUPERIOR, DIAMOND, DOUGLAS, EDMUND, ENFIELD, HUMBER, INDIAN, MASSEY-ARRAN, MATCHLESS, NORTON, RUDGE, SCOTT, TRIUMPH, VELOCETTE:**

while our to-day's stock of high-quality used machines comprises many exceptional bargains.
Ask for details.

# Layton Garages

**90, High Street, OXFORD, and BICESTER.**

## "Ixion" knows how to keep dry!

*"Finally I bought a first-grade suit of grey Oilskins made by Barbours "of South Shields, and found I could ride my 200 miles of a trial, "stand in a steady downpour through two hill-climbs per diem, sit on "wet grass banks when my legs wearied, and get into the hotel at night "bone-dry; moreover, if the oilies were hung up over night in a wall- "less stable for the draughts to play around them, they were invariably "bone-dry long before the first competitor got away next morning."*

"Ixion," in his Occasional Comments—"The Motor Cycle."

*Money back in full if they go sticky, leak, or tail on any point*

# Beacon Oilskins

**DON'T GO STICKY OR LEAK.**

The Beacon Motor Cycling Suit will keep you as dry as it does "Ixion," and will enable you to drive all day against wind-driven Rain and Sleet without letting you get wet or chilled.
Black double lightweight Jackets with Windcuffs, double fronts, and two roomy pockets, **27/6** semi-buttoned Legging Overalls, **15/-.**

**SUIT COMPLETE** (post free) **42/6**

In Bronze — Jackets **32/6** Semi-buttoned Legging Overalls, **17/6** Suit complete, post free, **50/-**; with Seated Trouser Overalls in place of leggings, **55/-** and **62/6** the suit respectively.

Prices given are for Jacket length 33". For 36" & 39" length please add 2/6 and 5/- per jacket respectively. Overalls: Prices are for 28" to 33" inside leg, and for Seated Trouser Overalls up to 40" waist.

*Postage Free U.K.; extra abroad (Allow also extra time for special Seasoning of Overseas Orders.)*

## A Telegram:

T.T. RACES,
DOUGLAS, 30/5/22

"Davison on Levis Winner Light-weight, **using Summer Huile de Luxe,** broke all records for light-weights, averaging 50 miles per hour."

## An Editorial:

(*The Motor Cycle*, June 1/22.)

"……Immediately after, the winning Levis purred in, its engine running with much the same smooth power as at the start.…*Judging by Davison's jaunty appearance, the Levis had given him a very comfortable ride; he seemed tolerably fresh and full of smiles.*"

**SUMMER HUILE DE LUXE** had much to do with this splendid result.

## An Offer:

We gladly place at the disposal of Motor Cyclists a gratis supply of helpful literature dealing with all problems of lubrication.

Remember, Price's are practical people on these points.

*P.S.:*

**SUMMER HUILE DE LUXE,** sold by Motor Agents everywhere, is identical with that used on the winning Levis.

PRICES' Company Limited,
**BATTERSEA, S.W.11**

# Sooted Plugs

The insulator is expressly designed to withstand excessive lubrication.

**A common error is to suppose that it is the sparking points that soot up and cause misfiring.**

**It is very seldom the points. — It is nearly always the insulation.**

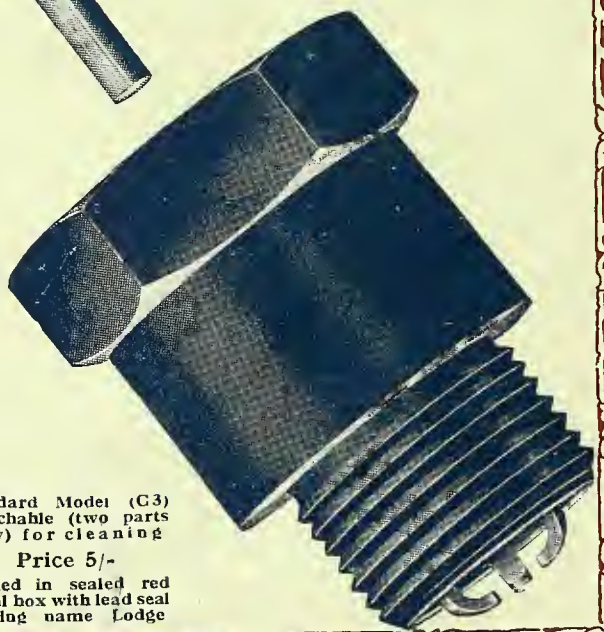
**You should be able to clean the surface of the insulator inside the plug in case of any over-oiling.**

Look at this illustration of

## THE LODGE PLUG

It is detachable (2 parts only).

See how easy it is to get at the interior and wipe over the insulation should it require cleaning. The plug can then simply be screwed together again as tight and as good as new.



**CAUTION.**

*War Surplus Lodge plugs advertised for sale by jobbers and others outside the motor trade are unsuited for use on cars or motor cycles. They were made for special aeroplane engines, from three to six years ago, and are now obsolete. Motorists can, however, make sure of getting up-to-date designs of Lodge plugs by buying them in their sealed metal boxes of all dealers in high-class motor accessories.*

**LODGE PLUGS LTD., RUGBY.**

**Standard Model (G3) Detachable (two parts only) for cleaning**

**Price 5/-**

**Packed in sealed red metal box with lead seal bearing name Lodge**
